# Welcome

Congratulations on your purchase of this Sony VAIO® computer, and welcome to the online VAIO® Computer User Guide. This user guide provides detailed information on all aspects of using your new VAIO computer, from keyboard functions to preinstalled software programs.
In the left navigation window, click the topics you want to learn more about, and that information will be displayed in this main window.

View the Electronic Flyer, which provides updates and supplemental information about your computer.

Go to the Sony Computing Support Web site to view the VAIO® Computer Specifications, which list your computer's hardware specifications and preinstalled software information.

For Sony software information, click **Start** and select **Welcome to VAIO life**.

# Ergonomics and Caring for Your Computer

This section provides information on how to safely use your Sony computer.

## Applying Ergonomics

Your computer is a portable device and can be used in a variety of environments. Whenever possible, you should apply the following ergonomic considerations:

- **Position of your computer —** Place the computer directly in front of you as you work. Keep your forearms horizontal, with your wrists in a neutral, comfortable position while using the keyboard, touch pad, or external mouse. Let your upper arms hang naturally at your sides. Take breaks during sessions with your computer. Excessive use of the computer may strain muscles or tendons.

- **Furniture and posture —** Sit in a chair with good back support and armrests. Adjust the level of the chair so your feet are flat on the floor. A footrest may make you more comfortable. Sit in a relaxed, upright posture and avoid slouching forward or leaning far backward.

- **Viewing angle of the computer's display —** Tilt the display to find the best viewing angle. Also try adjusting the brightness setting of the display. Following these suggestions can reduce eye strain and muscle fatigue.

- **Lighting —** Choose a location where windows and lights do not create glare or reflection on the display. Use indirect lighting to avoid bright spots on the display. You can purchase accessories for your display that help reduce glare. Proper lighting adds to your comfort and work effectiveness.

- **Placement of an external display —** When using an external display, set the display at a comfortable viewing distance. Make sure the display screen is at eye level or slightly lower when you are sitting in front of the monitor.

## Storing Your Computer

- Do not use or store your computer in a location subject to:
  - Heat sources, such as radiators or air ducts
  - Direct sunlight
  - Excessive dust
  - Moisture or rain
  - Mechanical vibration or shock
  - Strong magnets or speakers that are not magnetically shielded
  - Ambient temperature higher than 95ºF (35ºC) or less than 40ºF (5ºC)
  - High humidity
- Do not place electronic equipment near your computer. When running, the computer's electromagnetic field may cause other electronic equipment in close proximity to malfunction.
- Provide adequate air circulation to prevent internal heat buildup. Do not place your computer on porous surfaces such as rugs or blankets, or near materials such as curtains or draperies that may block ventilation. Leave a space of at least 8 inches (20 cm) behind the back of the computer.
- If the computer is brought directly from a cold location to a warm one, moisture may condense inside your computer. In this case, allow at least one hour before turning on your computer. If any problems occur, unplug your computer, and contact your Sony Service Center.
- The computer uses high-frequency radio signals and may interfere with radio or TV reception. Should this occur, move the computer a suitable distance away from the radio or TV.
- Do not drop the computer or place heavy objects on top of the computer.

## Using Cables and Connections

- Use only specified peripheral equipment and interface cables.
- Do not use cut or damaged connection cables.
- If the telephone company makes a service call to your home or office and determines that your computer is responsible for a problem, the telephone company may bill you for the service call. Also, if you do not disconnect your computer when it is adversely affecting a telephone line, the telephone company has the right to disconnect your service until you correct the problem.

## Cleaning and Maintaining Your Computer

- Clean the computer with a soft, dry cloth or a soft cloth lightly moistened with a mild detergent solution. Do not use any type of abrasive pad, scouring powder, or solvent such as alcohol or benzine, as these may damage the finish of your computer. You can use canned compressed air specifically for computers to remove dust.

- If a solid object falls onto the computer or a liquid leaks into the computer, immediately turn off and unplug the computer. It is best to have the computer checked by qualified personnel before you use it again.

- Avoid rubbing the LCD screen as this can damage the screen. Use a soft, dry cloth to wipe the LCD screen or canned compressed air.

- Always disconnect the power cord before cleaning the computer.

- Your computer is equipped with a cooling fan and heat sink that help your computer maintain a safe operating temperature. These areas must be kept clean and free from debris, such as dust, dirt, pet hair, or other particles that can restrict the flow of air. If dust is allowed to accumulate in the cooling fan and heat sink area, your computer may overheat and stop operating properly.

    - Avoid using your computer in locations that are subject to excessive dust or dirt, such as the floor or on the ground.

    - Avoid using your computer on or near surfaces that may have dust or shedding fibers, such as rugs, blankets, curtains, or draperies.

    - Avoid using your computer in areas where pets are kept, or pet hair accumulates.

## Handling the LCD Screen

- Direct sunlight can damage the LCD. Be careful when using the computer near a window.
- Do not scratch the LCD or exert pressure on it. This can cause a malfunction.
- Using the computer in low temperature conditions may produce a residual image on the screen. This is not a malfunction. When the computer returns to normal temperature, the screen returns to normal.
- The screen becomes warm during operation. This is normal and does not indicate a malfunction.
- The LCD is manufactured using high-precision technology. You may, however, see tiny black points and/or bright points (red, blue, or green) that continuously appear on the LCD. This is a normal result of the manufacturing process and does not indicate a malfunction.

# Locating Controls and Ports

Congratulations on your purchase of the Sony® VAIO® computer. Sony has combined leading-edge technology in audio, video, computing, and communications to provide state-of-the-art personal computing.

## About the Indicator Lights

| Indicator | Function |
| --- | --- |
| Power  | Turns on when the power to the computer is on, blinks in Standby mode, and turns off when the computer is in Hibernate mode or off. |
| Battery  | Turns on when the computer is using battery power, blinks when the battery is running out of power, double-blinks when the battery is charging. |
| Memory Stick®  | Turns on when data is read from or written to the Memory Stick media. (Do not enter Standby mode or turn off the computer when this indicator is on.) When the indicator is off, the Memory Stick media is not being used. |
| Hard Disk  | Turns on when data is read from or written to the hard disk. Do not enter Standby mode or turn off the computer when this indicator is on. |
| Num Lock  | Press this key to activate the numeric keypad. Press it a second time to deactivate the numeric keypad. The numeric keypad is not active when the indicator is off. |
| Caps Lock  | Press this key to type letters in uppercase. Letters appear in lowercase if you press Shift while the indicator is on. Press the key a second time to turn off the indicator. Normal typing resumes when the Caps Lock indicator is off. |
| Scroll Lock  | Press this key to change how you scroll the display. Normal scrolling resumes when the Scroll Lock indicator is off. The Scroll Lock key functions differently depending on the program you are using and does not work with all programs. |
| Bluetooth®[1] | Turns on when the wireless switch is set to ON and Bluetooth technology is enabled. |
| Wireless LAN[1] | Turns on when the wireless LAN function is running. |

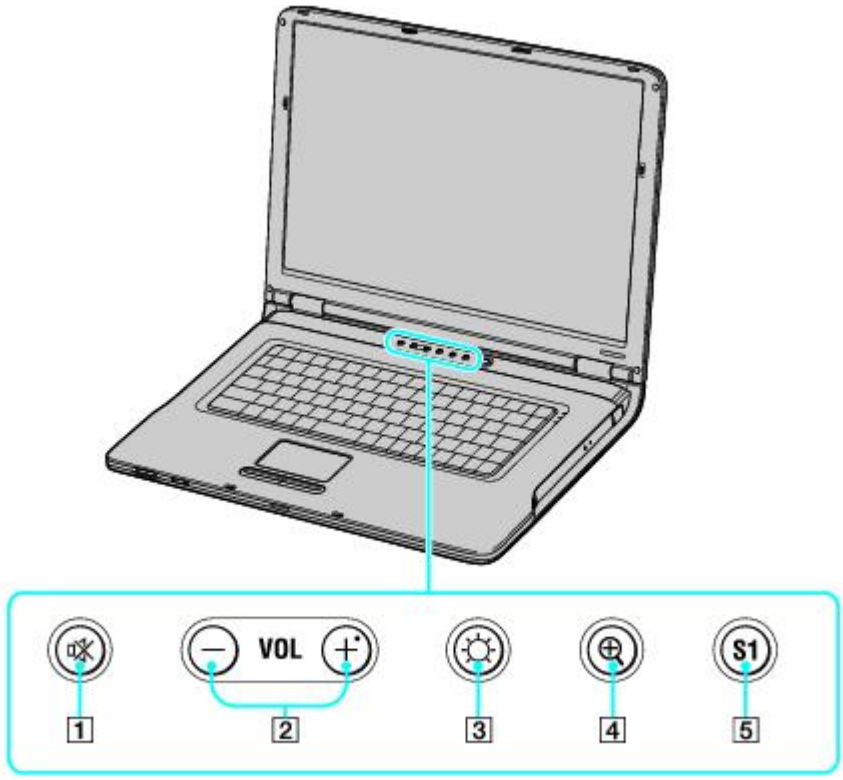
# Using Special Buttons

Your VAIO® computer is equipped with a variety of audio- and video-oriented function buttons: Volume, Brightness, Magnify screen, and S1.

## About the special buttons

The following information shows where the special buttons are located, and briefly describes their functionality.

***Special Buttons***



**Number Type of Button**

1 Mute. The Mute button enables and disables the audio output when using headphones or the internal speakers. This button does not enable and disable the audio output for Optical Out, Line Out, or AV Out connections. The Mute button illuminates when the audio output is disabled.

2 Volume. The Volume buttons control the audio output on your computer.

3 Brightness. The Brightness button, located between the Magnify screen and Volume buttons, toggles brightness levels for the computer's LCD screen. There are three brightness settings: Auto, Brightness, and Max. The brightness button illuminates when the brightness level is set to Brightness or Max.

4 Magnify screen. The Magnify screen button, located next to the computer's brightness button, works as a screen resolution toggle button. By pressing it, you can alternate between different screen resolutions.

5 S1. The S1 button is a pre-programmable button that enables you to enter a power saving mode, switch between displays, or launch an application.

## Using the S1 button

As a shortcut, you can assign a pre-programmable S1 button to enter a power saving mode, switch between displays, or launch an application.

**To assign a function to a programmable button**

1. Click **Start**, and point to **All Programs** and then **VAIO Control Center**. The **VAIO Control Center** window appears.
2. Click the **List** tab, and double-click **S Button**. The **S Button** window appears.
3. Click to select a key assignment from the **S1** drop-down menu.
4. Click **OK**.
5. Depending on the key assignment, you may be able to customize the S1 button further by clicking **Advanced**.

From the **S Button** window, you can click **Help** to bring up the **Help for S Button** help file.

## Additional information about adjusting the brightness of the LCD screen

Your computer comes with a brightness sensor that automatically increases and decreases the LCD screen's brightness level depending on the amount of external light. The automatic sensor is engaged the first time you turn on your computer. To override the automatic setting and manually adjust the brightness, follow these steps:

- Press the Brightness button, located next to the Volume buttons, and select one of the three brightness settings (Auto, Brightness, and Max).
- Press the **Fn** and **F6** keys to increase brightness.
- Press the **Fn** and **F5** keys to decrease brightness.

## Using the Keyboard

Although your computer's keyboard is very similar to a typewriter's keyboard, you can use the additional keys on the computer's keyboard to perform specific computer-related tasks.

## Using the Keyboard

Although your computer's keyboard is very similar to a typewriter's keyboard, you can use the additional keys on the computer's keyboard to perform specific computer-related tasks.

## Keyboard descriptions

| Key | Description |
|---|---|
|  | The numeric keypad contains the keys found on a typical calculator. Use the numeric keypad to type numbers or perform mathematical calculations, such as addition and subtraction. Numbers appear on the front beveled edge of the numeric keys. Press the Num Lock key to activate the numeric keypad. (When you do so, the Num Lock indicator light turns on.) Press the Num Lock key again to deactivate the numeric keypad. |
|  | The arrow keys move the pointer on the screen. They also function as the Home, End, Page Up, and Page Down keys, respectively, when the Fn key is pressed. |
|  | The correction keys enable you to make corrections to keystrokes. |
|  | The 12 function keys along the top of the keyboard perform designated tasks. For example, in many programs, F1 is the Help key. The task associated with each function key may vary from one program to the next. |
|  | The Escape key cancels commands. |
|  | The Print Screen key takes an electronic snapshot of the screen and moves it to the Clipboard. You can then paste the screen shot into a document and print it. |
|  | The operator keys provide a variety of commands. For example, in many programs, instead of choosing the Save command from a menu, you can hold down **Ctrl** and press **S** (referred to as **Ctrl+S**). Also, the Shift key to produces capital letters or special symbols, such as @ and $. |
|  | The Windows key opens the Start menu. It is the equivalent of clicking Start on the Windows® taskbar. See Windows key combinations for more information. |
|  | The Fn key is used in combination with other keys to issue commands. See Fn key combinations for more information. |
|  | The Applications key opens a shortcut menu of context-sensitive choices. It is the equivalent of clicking the right mouse button. |

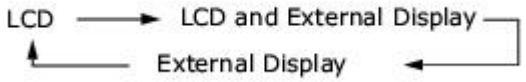
## Windows key combinations

| Key combination | Function |
| --- | --- |
| +F1 | Displays the VAIO Help and Support Center window. |
| +Tab | Switches the selected button on the taskbar. |
| +D | Displays the desktop. |
| +E | Displays the My Computer window. |
| +F | Displays the Search Results window, where you can find a file or folder. This is the equivalent of selecting Search from the Start menu. |
| +Ctrl+F | Displays the Search Results - Computers window, where you can locate other computers. This is the equivalent of selecting Search, and then Computer from the Start menu. |
| +M | Minimizes all displayed windows. |
| Shift+ +M | Returns all minimized windows to their previous size. |
| +R | Displays the Run window. This is the equivalent of selecting Run from the Start menu. |
| Fn+ +Insert | Displays the System Properties window. This is the equivalent of selecting Control Panel, and then System from the Start menu. |

## Fn key combinations

| Key combination | Function |
|---|---|
| Fn+F5 | Decreases the LCD screen brightness. |
| Fn+F6 | Increases the LCD screen brightness. |

Fn+F7 Toggles the display between the computer screen (LCD), a connected external display, and both the LCD and an external display.



Select one display when playing a DVD. Connect the cable(s) before you turn on the computer; otherwise, Fn+F7 will not work.

Fn+F12 Puts the system into Hibernate mode, a power management state. To return the system to normal operating mode, press the power button. Hibernate mode consumes the lowest level of power.

Fn+Esc Puts the system into Standby mode, a power management state. To return the system to the active state, press any key or the power button.

## Connecting a Mouse or Keyboard

Your computer is compatible with many popular mice and keyboards. To function properly, the device you connect must be compatible with the Microsoft® Windows® operating system installed on your computer.

## Connecting a mouse or keyboard

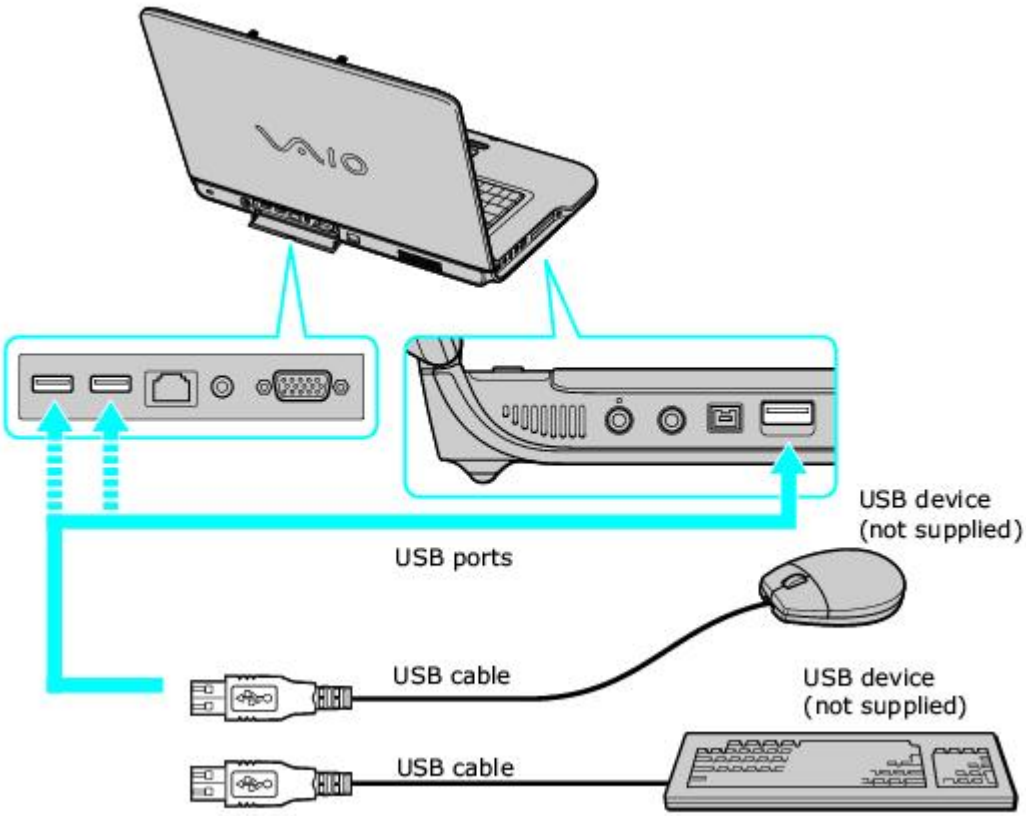
If you connect the mouse or keyboard when the computer is on, you may need to restart the computer for it to recognize the device.

### To connect a USB mouse or keyboard to your computer

1. Plug the USB cable into the USB port . See Locating Controls and Ports for more information.

   One USB port supports one USB connection.

***Connecting a USB Mouse or Keyboard***



2. If the **New Hardware Wizard** appears, follow the on-screen instructions to complete the installation process.

Although the New Hardware Wizard guides you through the software installation, some devices require separate driver software installation. See the instructions that accompanied your mouse or keyboard for more information

## Disconnecting a mouse or keyboard

You can disconnect a USB mouse or keyboard when the computer is on or off. However, disconnecting the mouse or keyboard when the computer is in a power saving mode (Standby or Hibernate) may cause the computer to malfunction.

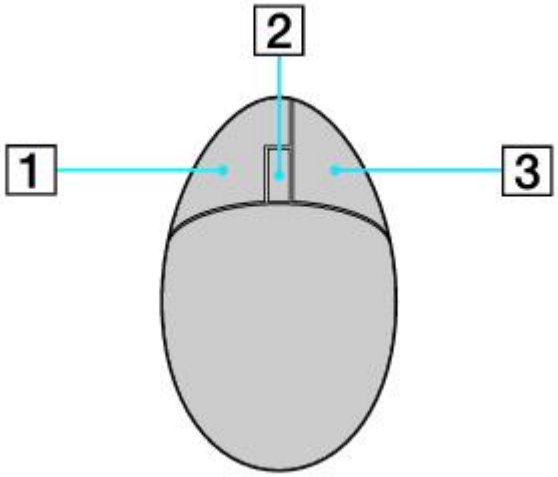
### To disconnect a mouse or keyboard

- Unplug the USB cable from the USB port.

## Connecting a Wireless Mouse

A wireless mouse is optional with your VAIO® computer. The following section explains the parts of the wireless mouse and how it works.

### *Wireless mouse (top)*



**1 Left mouse button**

Press to perform specific mouse functions.

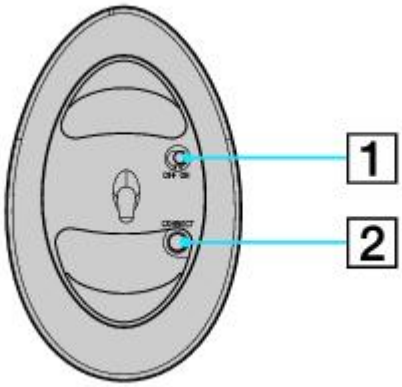
**2 Wheel button**

Rotate the wheel to scroll up or down on the LCD screen.

**3 Right mouse button**

Press to perform specific mouse functions.

### *Wireless mouse (bottom)*



**1 Power switch**

Slide power switch to turn the mouse on or off.

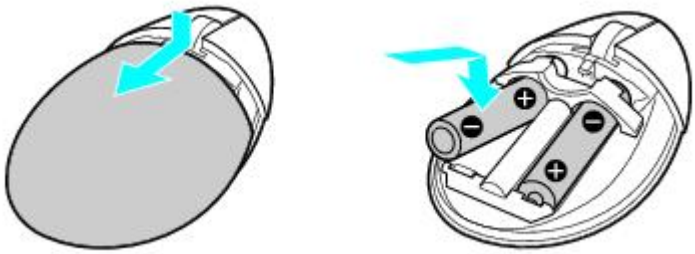
**2 CONNECT button**

Press to enable communication between your VAIO® computer and the wireless mouse.

## To set up the wireless mouse

Insert two AA batteries (supplied with the mouse) into the wireless mouse as shown.

***Inserting batteries into the wireless mouse***



If your wireless mouse does not operate properly, the batteries may need to be replaced. When your wireless mouse is not being used for extended periods of time, remove the batteries to avoid possible damage from battery leakage.

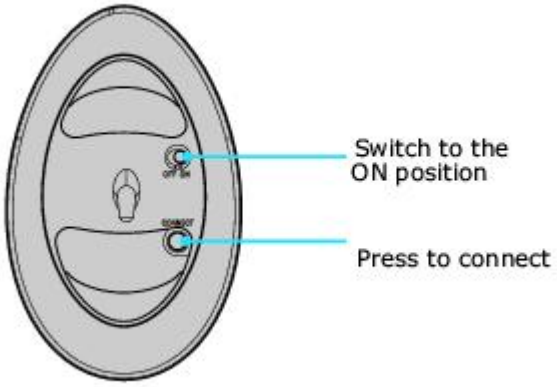
## To connect the wireless optical mouse

Before attempting to use the wireless mouse, you must enable communication between the computer and the mouse.

When attempting to connect the wireless mouse, confirm that the AA batteries (supplied) are properly inserted into the mouse before your computer is turned on.

1. Turn the wireless mouse over.
2. Slide the power button on the wireless mouse to the **ON** position.

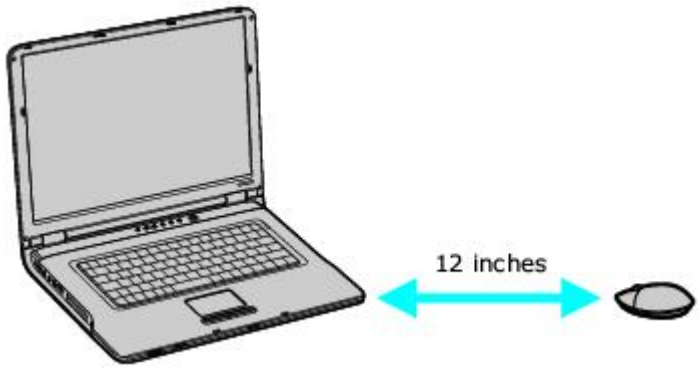
### *Connecting the mouse*



3. Turn on your computer.
4. Reach underneath the right side of the computer and press the **CONNECT** button.
5. Immediately, press the **CONNECT** button on the wireless mouse.

Make sure to press the CONNECT button on the wireless mouse within 30 seconds after pressing the CONNECT button on the computer. The wireless mouse must be within 12 inches of the computer.

### *Positioning the mouse*



6. Place the optical mouse on an appropriate surface to enable tracking.

## Additional information about the wireless optical mouse

The wireless optical mouse requires an ideal surface texture in order to provide precision pointing and tracking.

- Use surfaces such as plain paper, card stock, or fabric that have minimal repetitive patterns.
- Avoid surfaces such as mirrors, smooth glass, or magazines that have half- tone printing.

The wireless optical mouse requires unobstructed communication with the system unit for proper operation.

- Do not exceed a maximum distance of 2 feet between your VAIO® computer and your wireless mouse.
- Confirm that the supplied AA batteries are properly installed.
- Press the **Connect** buttons located underneath the right side of the computer and on the bottom of the mouse, to establish the communication between the equipment.
- Verify the infrared receiver on the computer's front panel is free of obstructions that may prevent proper operation.
- Avoid using radio-controlled toys or equipment, CB radios, and other wireless devices in the area near your wireless mouse. These devices may cause interference, causing your mouse to stop working properly.
- Do not place metal furniture near your computer or wireless mouse, as this may create interference, causing your mouse to stop working properly.

## Describing the Touch Pad

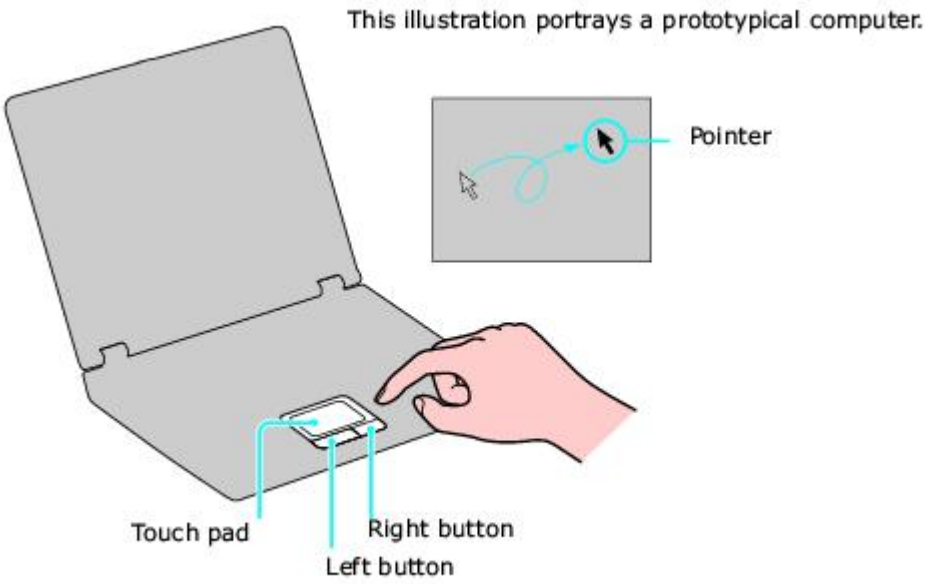
A pointing device called a touch pad is located in front of the keyboard. You can point to, select, drag, and scroll objects on the screen using the built-in touch pad.

## Describing the Touch Pad

A pointing device called a touch pad is located in front of the keyboard. You can point to, select, drag, and scroll objects on the screen using the built-in touch pad.

# Locating and using the touch pad

## *Locating the Touch Pad*



| Touch Pad Action | Description |
|---|---|
| Sliding one finger | Equivalent to using a mouse to place the pointer on an item. |
| Tapping once | Equivalent to pressing the left button once. |
| Tapping twice | Equivalent to pressing the left button twice. |
| Sliding one finger while pressing the left button | Equivalent to using the mouse to drag an item. |
| Moving your finger along the right edge of the touch pad | Equivalent to scrolling vertically. (The scroll function is available only with programs that support a touch pad scroll feature.) |
| Moving your finger along the bottom to scroll horizontally | Equivalent to scrolling horizontally. (The scroll function is available only with programs that support a touch pad scroll feature.) |

## Customizing the touch pad

Customizing your touch pad and mouse preferences may entail changing the pointers, enabling or disabling the tapping feature, and adjusting the touch pad speed. The touch pad and mouse preferences are adjustable from the Mouse Properties dialog box. You also have the option to disable the touch pad when you want to use an external mouse. If it is disabled, the touch pad may easily be enabled again using a series of keyboard steps.

**To customize the touch pad or mouse**

- Right-click the **Touch Pad** icon  on the **Taskbar Notification** area, and click **Mouse Properties** from the shortcut menu. The **Mouse Properties** dialog box appears.
- Click **Start** on the Windows® taskbar, point to **All Programs**, and click **VAIO Control Center**. Select the **List** tab, and double-click **Mouse**. The **Mouse Properties** dialog box appears.

**To disable the touch pad**

1. Click **Start** on the Windows® taskbar, and point to **All Programs**.
2. Click **VAIO Control Center**. The **VAIO Control Center** dialog box appears.
3. Select the **List** tab, and double-click **Built-in Pointing Device**. The **Built-in Pointing Device** dialog box appears.
4. Click to deselect the **Enable** checkbox, and click **OK**. A caution message may appear if an external mouse is not connected to the computer.

**To enable the touch pad**

1. Press the **Windows** key  . The **Start** menu appears.
2. Press **P** until **All Programs** is selected, and press **Enter**.
3. Press **V** until **VAIO Control Center** is selected, and press **Enter**. The **VAIO Control Center** dialog box appears.
4. Use the Tab and arrow keys to select the **List** tab.
5. Use the arrow keys to select **Built-in Pointing Device**, and press **Enter**.
6. Use the Tab key to select the **Enable** option, then press the +/= key, and press **Enter**.

# Using the Multilingual User Interface Language Option

(Microsoft® Windows® XP Professional only) After you have initially setup your new VAIO® computer, you can change the language displayed in Microsoft® Windows® XP Professional operating system. The multilingual user interface (MUI) language option changes the text controlled by Windows XP Professional operating system. Menus, help files, and icons generated by Windows XP Professional are shown in your selected language. All other programs are displayed in English as the default language.

The multilingual user interface language option is not designed to replace a localized version of the Microsoft® Windows® XP Professional operating system. Under certain conditions, some third-party software applications may not function properly.

**To Change the Language Option**

1. Click **Start** on the Windows® taskbar, and then click **Control Panel**.
2. Click **Date, Time, Language and Regional Options**, and then click **Regional and Language Options**. The **Regional and Language Options** dialog box appears.
3. Click the **Languages** tab.
4. From the **Language used in menus and dialogs** shortcut menu, select the desired language:
   - English
   - Español
   - Português
   - Français
5. Click **Apply**. The **Change Regional Options** shortcut window appears.
6. Click **OK**.
7. Click **Start** on the Windows® taskbar, and then click **Logoff**.

Additional users can also change to their desired language(s) without affecting your existing language settings.

## Changing Numbers, Currency, Time, and Date Formats

You can change your operating system's number, currency, time, and date formats to coordinate with your chosen country or language settings.

**To change these formats**

1. Click **Start** on the Windows taskbar, and then click **Control Panel**.
2. Click **Date, Time, Language and Regional Options**, and click **Regional and Language Options**. The **Regional and Language Options** dialog box appears.
3. From the **Regional Options** tab, click the **Standards and formats** shortcut menu to view the available country or language choices. Select the desired country or language.
4. Click **Customize** to change the number, currency, time, and date settings.
5. Click **Apply**.
6. Click **OK**.
7. Click **OK**.

## Changing the Window Design of Sony Programs

This feature changes the appearance, such as color, of certain Sony programs.

**To change the window design**

1. Click **Start**, and then **Control Panel**.
2. In the left panel, click **Switch to Classic View**.
3. Double-click **UI Design Selector**.
4. Click **<<** or **>>** to view the designs.
5. Click **Apply** to select a design that appears in the center window. The **UI Design Selector** window design changes. The window design for your Sony software will match the **UI Design Selector** window.
6. Click **OK**.

# Powering Your Computer

Your VAIO® computer comes with a battery and an AC adapter. This chapter explains how to install and use these supplied accessories to power your computer. It also describes ways you can efficiently utilize the battery as a power source.

## Using AC Power

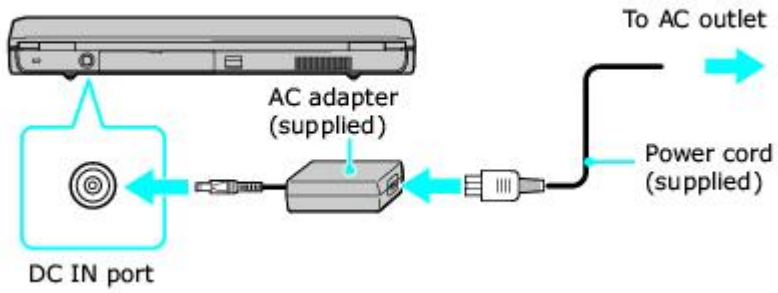
The supplied battery is not charged when you receive your computer. To charge the battery and begin using the computer immediately, insert the battery into the computer and use the supplied AC adapter as a power source. The computer automatically charges the installed battery while it uses AC power.

## Connecting the AC adapter

### To connect the AC adapter

1. Plug the AC adapter cable into the DC IN port.

***Connecting the AC Adapter to the Computer***



2. Plug the power cord into the AC adapter and an AC outlet.

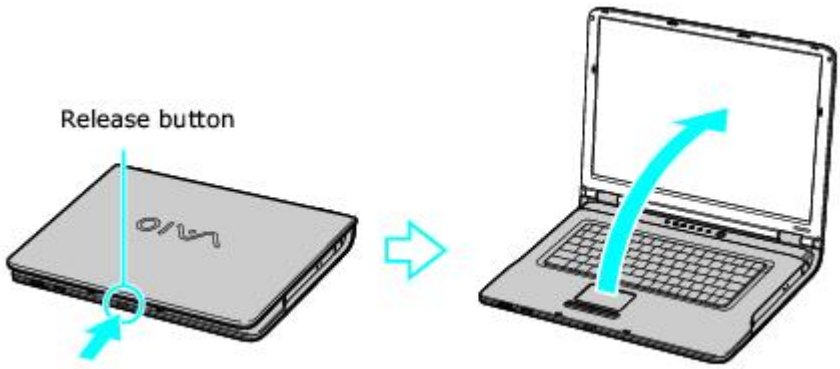
Use only the supplied AC adapter with your computer.

## Turning on the computer

### To open and turn on the computer

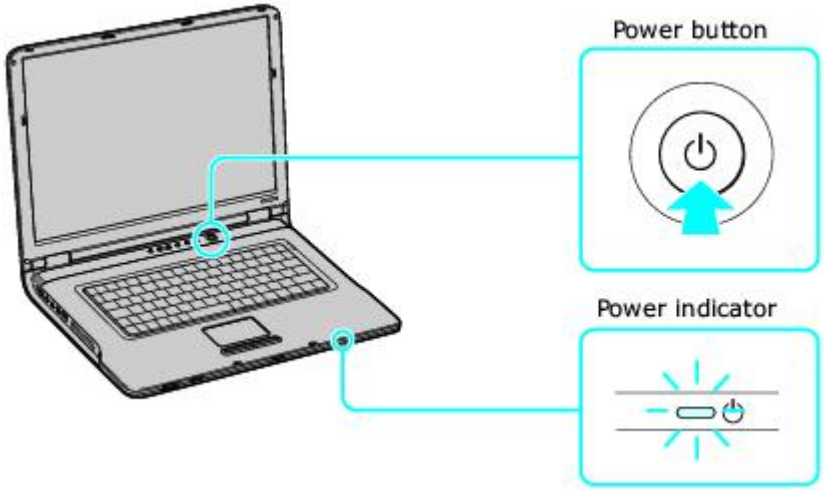
1. Press the release button and lift the cover while holding the bottom of the computer firmly.

***Opening the Computer***



2. Press the power button until the green power indicator turns on.

***Turning on the Computer***



If you continue to press the power button, the computer turns off.

3. If necessary, adjust the brightness of the LCD screen.

Your computer comes with a brightness sensor that automatically increases and decreases the LCD screen's brightness level depending on the amount of external light. To override the automatic setting and manually adjust the brightness, follow these steps:

- Press the Brightness button, located next to the Volume buttons. See Using Special Buttons for more information.
- Press the **Fn** and **F6** keys to increase brightness.
- Press the **Fn** and **F5** keys to decrease brightness.

## Using the Battery

Your computer, depending on the model you purchased, may come equipped with one battery bay and one multipurpose bay that supports a second battery. If your computer comes with two bays, you can purchase a second rechargeable battery to extend your computing time. For information on how to extend the life of the battery, see Conserving Battery Power for more information.

✍ When operating your computer on battery power, your computer's CPU speed is reduced.

✍ The battery that comes with your computer is not fully charged at the time of purchase.

✍ Some VAIO personal computers may function only with a genuine Sony battery.

## Using the Battery

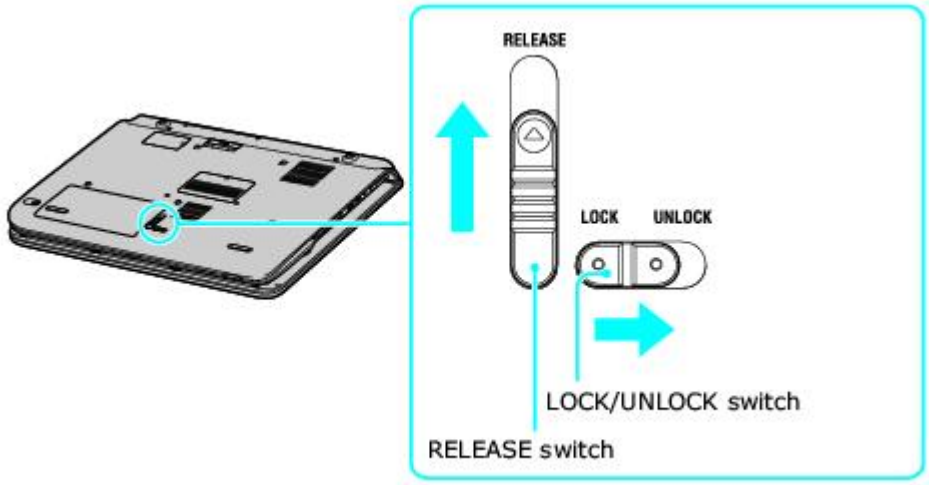
The supplied battery is not charged when you unpack it. To charge it for future use, install the battery, and then connect the AC adapter to power your computer. The battery charges from AC power regardless if the computer is on or off. For information on how to extend the life of the battery, see Conserving Battery Power.

## Inserting a battery

**To insert a battery**

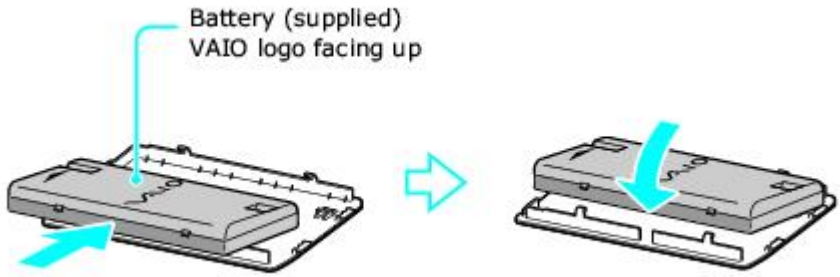
1. First turn the computer over so the bottom panel is facing up.
2. Slide the **LOCK/UNLOCK** switch to **UNLOCK**, and then slide the **RELEASE** switch in the direction of the arrow to lift the battery bay cover.

***Opening the Battery Bay***



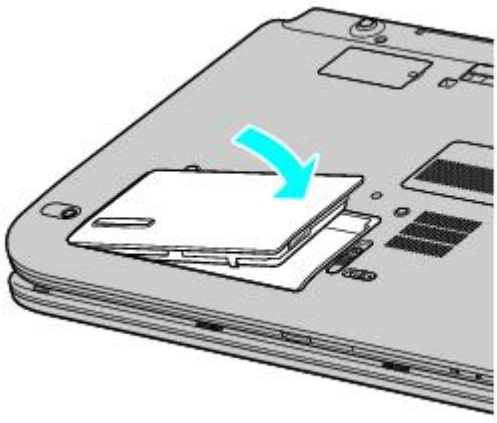
3. Slide the battery (with the logo facing up) into the battery bay cover. The two hooks on each side of the battery bay cover should click into the grooves on the battery.

***Inserting a Battery***



4. With the battery securely inserted into the battery bay cover, align the hooks on the battery bay cover with the grooves inside the battery bay.
5. Lower the battery into the battery bay until you hear it click.

***Securing the Battery***



6. Slide the **LOCK/UNLOCK** switch to **LOCK**.

If a port replicator is attached to your computer, do not insert or remove the battery. Lifting and turning the computer with a port replicator attached could cause a temporary loss of power.

Some programs and peripheral devices prevent the system from automatically entering Hibernate. If you are using battery power, save your data frequently to avoid data loss and manually activate a power saving mode. See Using power saving modes for more information.

## Removing a battery

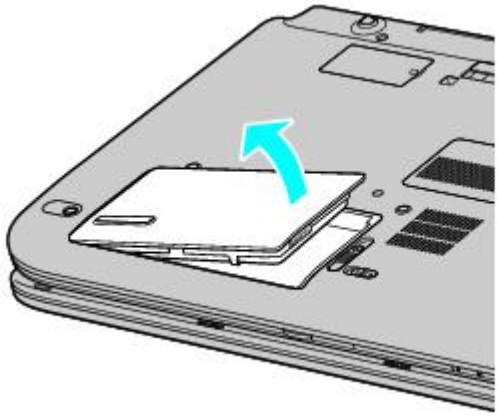
If you are not using the computer for an extended period of time, remove the battery from the computer to avoid damaging the battery.

**If the computer is on, connect the AC adapter and exit a power saving mode before you remove the battery.**

### To remove a battery

1. Make sure the computer is turned off.
2. Turn the computer over so the bottom panel is facing up.
3. Slide the LOCK/UNLOCK switch to UNLOCK, and then slide the RELEASE switch in the direction of the arrow to lift the battery bay cover.

***Removing the Battery***



4. Holding the battery bay cover steady, gently pry the tabs located on either side of the battery bay cover from the grooves in the battery, and lift the battery from the battery bay cover.

## Locating battery information

Displaying the battery status provides useful information, such as remaining battery life.

### To view battery information

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
3. Select the **Power Meter** tab. The total remaining battery charge is listed as a percentage.

You may also use the power icon on the Windows® taskbar to quickly view battery information. See To display the power icon on the taskbar for instructions on how to set up this shortcut.

### To display the power icon on the taskbar

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
3. Select the **Advanced** tab, and then select **Always show icon on the taskbar** in the **Options** box. The power icon appears on the taskbar. See the power icon descriptions below for more information.

You can rollover the power icon to view the remaining battery charge, and you can double-click the power icon to open the Power Meter window, which also displays the remaining battery charge.

| Power icon | Power status |
|---|---|
|  | Computer is using AC power. |
|  | Computer is using AC power and charging the battery. |
|  | Battery is charging. |
|  | Battery is fully charged. |
|  | Battery is discharging. |
|  | No battery is inserted in the computer. |

## Charging a battery

You will need to charge the battery if battery power drops below 10 percent or you have not used the battery for a long time. The lithium-ion battery supplied with your computer may be recharged at any time, whether you wait until the battery is completely or partially discharged. Charging a partially discharged battery does not affect battery life. If you charge the battery and find that battery power is still low, the battery may be reaching the end of its life, and you may need to replace it.

✍ The battery supplied with your computer is not charged at the time of purchase.

**To charge a battery**

You can charge the battery when the computer is on or off. However, the battery will charge faster when the computer is off. Charging the battery takes several hours.

✍ Charge the battery at temperatures between 50°F and 80°F (10°C to 30°C). Lower temperatures require more time to charge.

1. Insert the battery into the battery bay.
2. Connect the AC adapter to the computer. The computer automatically charges the battery as long as the computer is using AC power.

The battery indicator blinks while the battery charges. The battery indicator stops blinking when the battery is fully charged.

✍ When using two batteries, the battery you insert first charges first. The second battery you insert begins charging when the first battery is 85 percent charged.

| Battery indicator status | Description |
|---|---|
| On | The computer is using battery power. |
| Single blink | The battery is running out of power. |
| Double blink | The battery is charging. |
| Off | The computer is using AC power. |

## Notes on batteries

- Never leave the battery in temperatures above 140°F (60°C), such as under direct sunlight or in a car parked in the sun.
- While the battery is in use or being discharged, the battery heats up. This is normal and is not cause for concern.
- Keep the battery away from heat sources.
- Keep the battery dry.
- Do not open or disassemble the battery.
- Do not expose the battery to any mechanical shock.
- Battery life is shorter in a cold environment because of decreased battery efficiency at low temperatures.
- Some VAIO personal computers may function only with a genuine Sony battery.

## Conserving Battery Power

You may use the power saving modes and power schemes to conserve battery power. Conserving battery power may significantly extend your computing time, depending on how you use your computer.

## Using power saving modes

In addition to the normal operating mode, which allows you to turn off specific devices to save power, your computer has two distinct power saving modes: Standby and Hibernate. Use the Standby and Hibernate power saving modes to override a power profile setting and initiate immediate action.

- **Standby** — Saves the state of the system and peripheral devices in memory (RAM). Power consumption is reduced to a minimum. The system remains on, and the computer screen (LCD) is off.
- **Hibernate** — Saves the state of the system and peripheral devices to the hard disk. Power consumption is reduced to the lowest possible setting without being completely off. Hibernate mode consumes the lowest level of power. Your computer enters Hibernate mode when the remaining battery charge drops below 5 percent, regardless of the setting you select.

✍ Since some programs and peripheral devices prevent the system from entering Hibernate mode, save your data frequently to avoid data loss.

### To activate Standby mode

1. Click the **Start** menu on the Windows® taskbar, and click **Turn Off Computer**.
2. Click **Stand By**.
3. Press any key to return to normal mode.

### To activate Hibernate mode

1. Press the **Fn** and **F12** keys, or press the power button and release it immediately. Do not move the computer until the power indicator turns off.
2. Press the power button to return to normal mode.

✍ See Why doesn't my computer enter Hibernate mode? for more information.

## Using power schemes

You can use the preset power schemes to conserve power. By using the power schemes, you control the power supplied to different devices, such as the computer screen (LCD) and the hard disk drive, in your computer. You also control when the computer activates a power saving mode (Standby or Hibernate).

### To select a power scheme

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears with the **Power Schemes** tab selected.
3. Select a power scheme from the drop-down menu in the **Power schemes** box. Each power scheme is preset to utilize your power supply efficiently, according to your computing functions. Select the power scheme that best explains how you want to use your computer.
4. Click **Apply**.

### To create a power scheme

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears with the **Power Schemes** tab selected.

   You can also right-click the Power icon on the Windows® taskbar, and select **Adjust Power Properties** to open the **Power Options Properties** window.
3. Select your changes from the drop-down menus in the **Settings for....power scheme** box, and click **Save As** in the **Power schemes** box. The **Save Scheme** window appears.
4. Type a name for your customized power scheme, and click **OK**. The power scheme you created appears in the **Power schemes** box.

If you want to delete a power scheme, select the power scheme and click **Delete**. When the **Delete Scheme** window appears, click **Yes**.

### To customize your power properties

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
3. Select the **Advanced** tab, and select your changes from the drop-down menus in the **Power buttons** box. See Using power saving modes for information on how Standby and Hibernate modes affect power consumption.
4. Click **Apply**.

### To use VAIO Power Management

VAIO Power Management is a software program that enables you to further adjust the power settings on your computer. Once you have selected a power scheme under the **Power Schemes** tab, you can modify it in the VAIO Power Management tab to enhance your computer's operations.

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
3. Select the **VAIO Power Management** tab, and specify the options you want to adjust.
4. Click **Apply**.

For information about **VAIO Power Management**, click the **Help** button located toward the bottom of the VAIO Power

Management tab. Alternately, click **Start**, select **All Programs**, then select **VAIO Power Management**, and click **VAIO Power Management Help**. The **Help for VAIO Power Management** file appears.

**To set your battery alarm**

You can change your computer settings to notify you when the battery power reaches a certain level.

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
3. Select the **Alarms** tab, and then select the type of alarm you want the computer to activate: a low or a critical battery alarm.
4. Drag the slider to the battery level at which you want the computer to activate the alarm. By default, the **Low battery alarm** is set to 10 percent.
5. Click **OK**.

✍ To further customize your alarm settings, click **Alarm Action**. In this window, you can select the type of alarm you want the computer to activate and how you want the computer to respond to the alarm.

## Locating power status information

Displaying the power status provides useful information, such as remaining battery life.

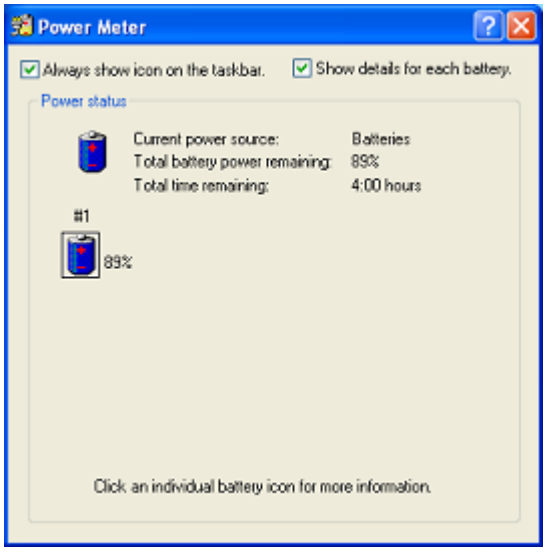
### To view the Power Meter window

1. Double-click the **Power** icon. The **Power Meter** window appears. You can also rollover the Power icon to view the remaining battery charge.

| Power icon | Power status |
| --- | --- |
|  | Computer is using AC power. |
|  | Computer is using AC power and charging the battery. |
|  | Battery is charging. |
|  | Battery is fully charged. |
|  | Battery is discharging. |
|  | No battery is inserted in the computer. |

If the Power icon is not displayed on the Taskbar Notification area, see To display the Power icon on the taskbar.

***Power Meter****



* The Power Meter window may appear slightly different on your computer, depending on the number of batteries your computer supports.

### To display the Power icon on the taskbar

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
3. Select the **Advanced** tab, and then select **Always show icon on the taskbar** in the **Options** box. The power icon appears on the taskbar. See the power icon descriptions above for more information.

## Internet Connections

This section describes the basic steps for setting up your dial-up or Ethernet connection to the Internet. The New Connection Wizard guides you through the process of connecting to the Internet and choosing an Internet service provider (ISP) or setting up an existing account. When you connect to the Internet, you can register your VAIO® computer, use online services, and gain access to Sony Computing Support.

## Internet Connections

This section describes the basic steps for setting up your dial-up or Ethernet connection to the Internet. The New Connection Wizard guides you through the process of connecting to the Internet and choosing an Internet service provider (ISP) or setting up an existing account. When you connect to the Internet, you can register your VAIO® computer, use online services, and gain access to Sony Computing Support.

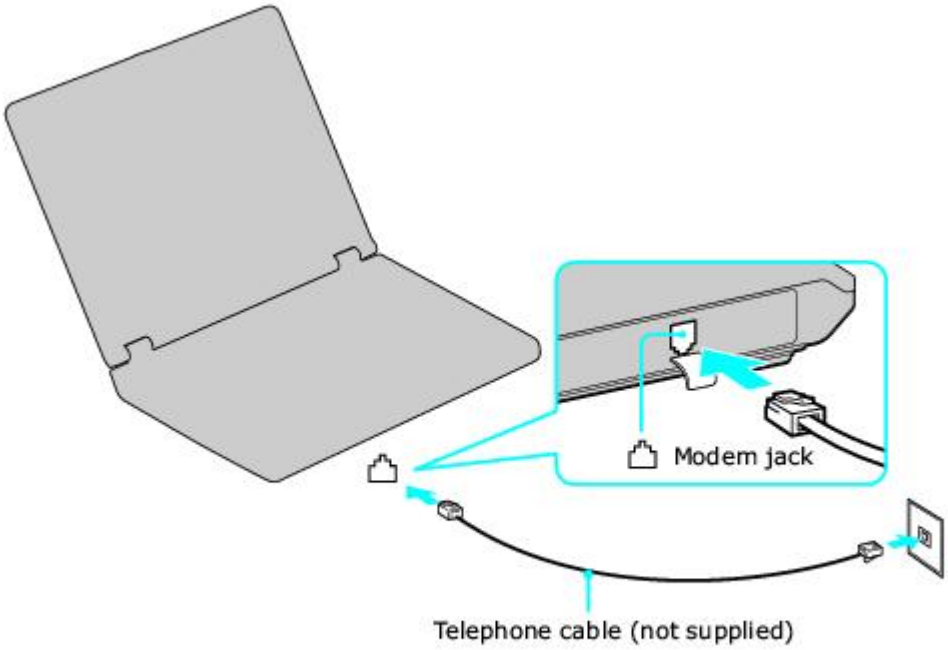
## Setting up a dial-up Internet connection

Before you can connect to the Internet, you need to connect your computer to a telephone line via a telephone cable (not supplied). Once you set up your telephone cable, you're ready to connect to the Internet.

### To connect a telephone cable

1. Locate the Modem jack on your computer. For location information, see Locating Controls and Ports.
2. Plug one end of the telephone cable into the Modem jack. Make sure it clicks into place.
3. Plug the other end into the wall jack.

***Connecting a Telephone Cable***



This illustration portrays a prototypical computer.
Actual port locations differ between computer models.

Your computer does not work with party lines, cannot be connected to a coin-operated telephone, and may not work with multiple telephone lines or a private branch exchange (PBX). Some of these connections may result in excess electrical current and could cause a malfunction in the internal modem.

If you connect a telephone cable coming through a splitter, the modem or connected device may not work properly.

### To set up a dial-up connection to the Internet

1. Connect your computer to a telephone line. See To connect a telephone cable for more information.
2. Click **Start**, point to **All Programs**, **Accessories**, **Communications**, and click **New Connection Wizard**. The **New Connection Wizard** appears.

***New Connection Wizard***

3. Click **Next**. If the **Location Information** dialog box appears, follow the on-screen instructions.

4. If it is not already selected, click to select **Connect to the Internet**, and click **Next**.

5. Follow the on-screen instructions.

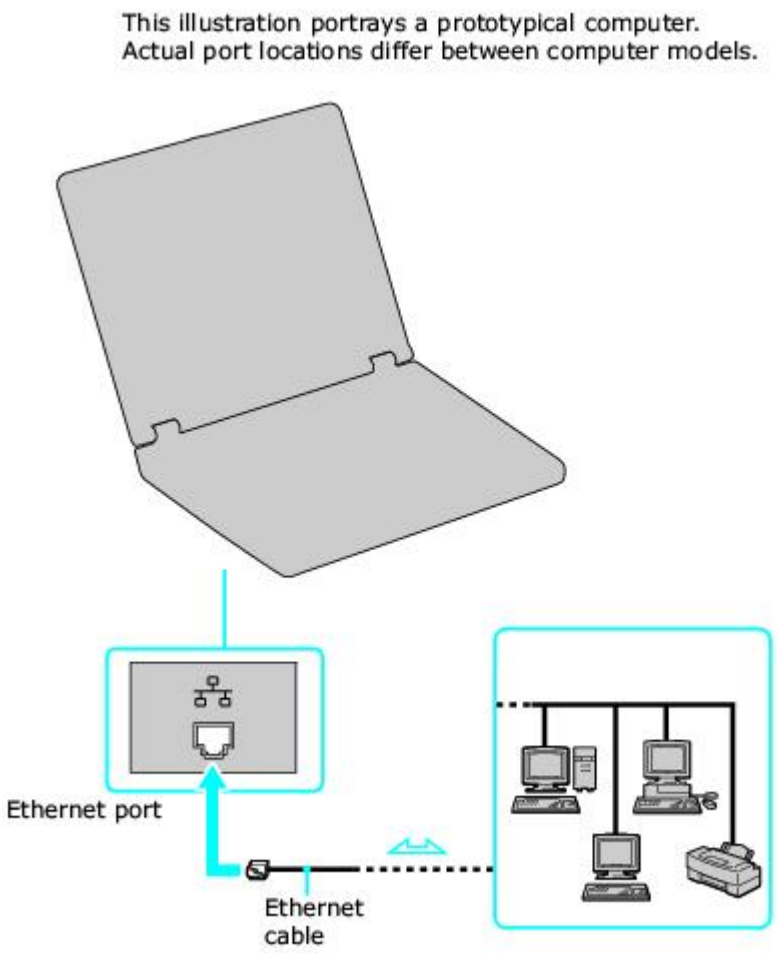
## Setting up an Ethernet Internet connection

Your computer accommodates both 10BASE-T and 100BASE-TX Ethernet connections, with data transfer speeds of between 10 and 100 Mbps.

### To connect an Ethernet cable

1. Locate the Ethernet port on your computer. For location information, see Locating Controls and Ports.

***Connecting an Ethernet Cable***



2. Plug one end of the Ethernet cable into your computer's Ethernet port and the other into the network connection.

### To set up an Ethernet connection to the Internet

1. Connect your computer to a network connection.

2. Click **Start**, point to **All Programs**, **Accessories**, **Communications**, and click **New Connection Wizard**. The **New Connection Wizard** appears.

***New Connection Wizard***

3. Click **Next**. If the **Location Information** dialog box appears, follow the on-screen instructions.
4. If it is not already selected, click to select **Connect to the Internet**, and click **Next**.
5. Follow the on-screen instructions.

## Customizing your Internet connection

The Internet Properties dialog box enables you to change the way you view the Internet. You can change your home page, fonts, language, and colors. You can also regulate content and set browsing preferences.

**To open the Internet Properties dialog box**

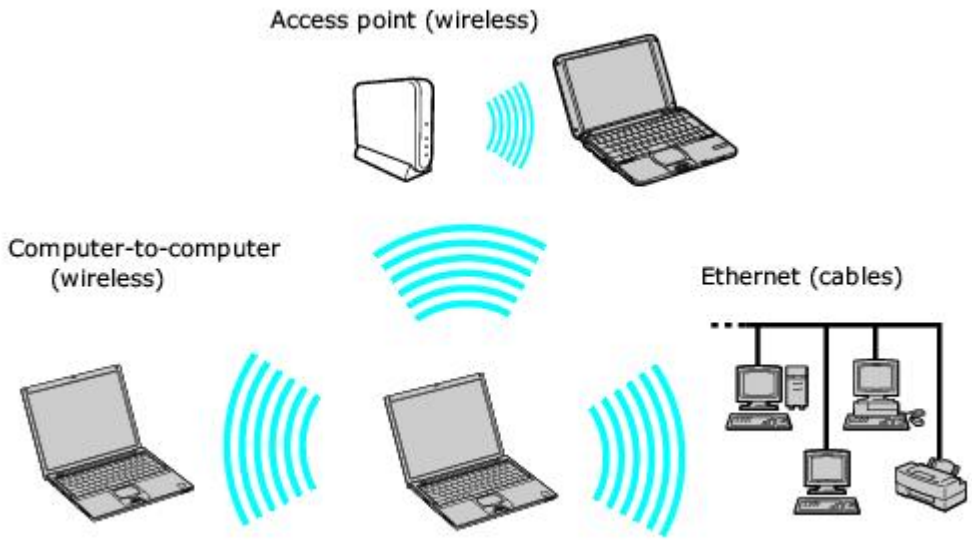
1. Click **Start** on the Windows® taskbar, and then **Control Panel**.
2. Click **Network and Internet Connections**, and then **Internet Options**. The **Internet Properties** dialog box appears.
3. Click the tabs to view options.
4. Make changes, and click **Apply** to activate your changes.
5. Click **OK**.

## Network Connections

With a Sony computer, you can easily set up or connect to a variety of networks. The New Connection Wizard and Network Setup Wizard make it easy to gain access to networks (LANs) using wireless, Ethernet, or dial-up connections.

For more information about networking, click **Start**, **Help and Support**, and then **Networking and the Web**.

### *Types of Networks**



* The computers represented in this illustration are for representative purposes only and may not be identical to the model you purchased.

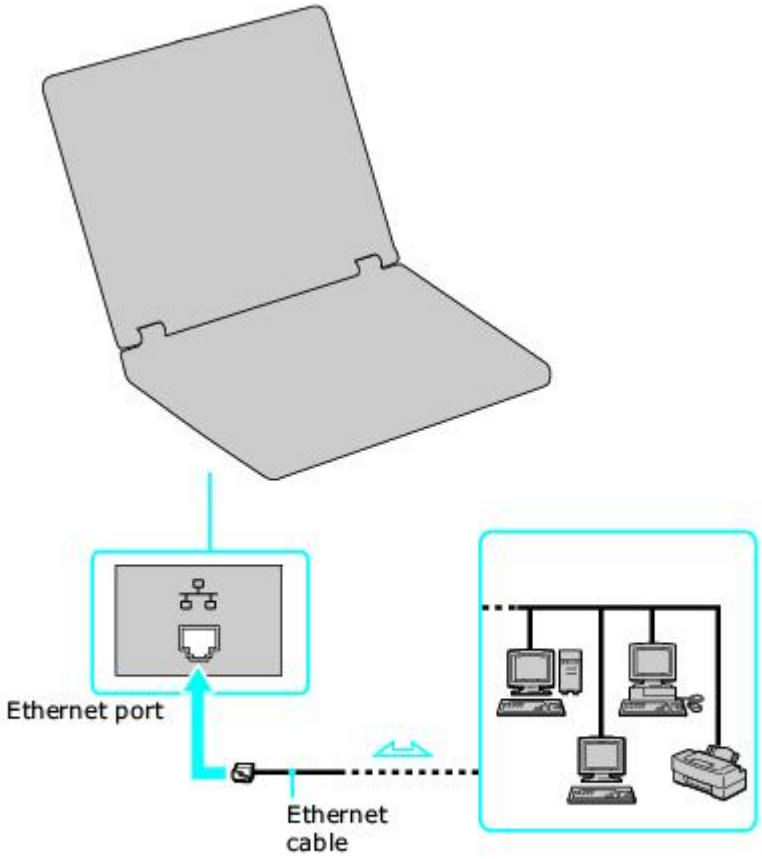
## Using Ethernet and dial-up connections

For setting up local area networks (LANs), Ethernet is a widely installed technology. Your computer accommodates both 10BASE-T and 100BASE-TX Ethernet connections, with data transfer speeds of between 10 and 100 Mbps.

### To connect to a local area network using a telephone or Ethernet cable

1. Connect an Ethernet or telephone cable to your computer. See To connect an Ethernet cable and Setting up a dial-up Internet connection for more information.

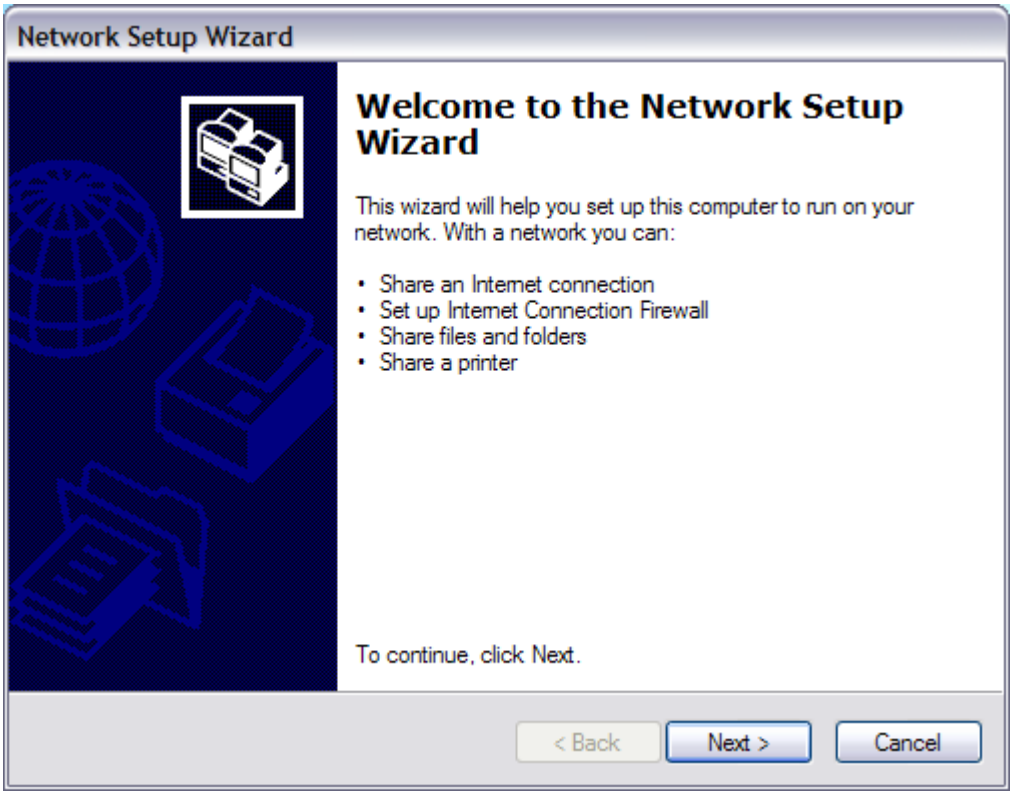
***Connecting an Ethernet Cable***



This illustration portrays a prototypical computer.
Actual port locations differ between computer models.

2. Click **Start**, point to **All Programs**, **Accessories**, **Communications**, and click **Network Setup Wizard**. The **Network Setup Wizard** appears.

***Network Setup Wizard***



3. Click **Next**. If you are prompted to the **Local Information** dialog box, follow the on-screen instructions.

**Only connect 10BASE-T and 100BASE-TX cables to the Ethernet port . Do not connect any other type of network cable or any telephone cable. Connecting cables other than those listed above may result in an electric current overload and could cause a malfunction, excessive heat, or fire in the port. To connect the unit to the network, see Using Ethernet and dial-up connections or contact your network administrator.**

You can connect to an Ethernet network from a remote location and use data, programs, and network resources. See Microsoft® Windows® Help by clicking **Help and Support** from the **Start** menu, and then clicking **Networking and the Web** in the left panel.

**To connect to a remote network using a telephone or Ethernet cable**

1. Connect an Ethernet or telephone cable to your computer. See To connect an Ethernet cable and Setting up a dial-up Internet connection for more information.
2. From the **Start** menu, point to **All Programs**, **Accessories**, **Communications**, and click **New Connection Wizard**.
3. Click **Next**. If you are prompted to the **Local Information** dialog box, follow the on-screen instructions.
4. Click **Connect to the network at my workplace**, and then click **Next**.
5. Follow the on-screen instructions.
6. Ask your network administrator for the detailed settings and devices needed to connect to an existing network.

## Using wireless network connections (selected models only)

A wireless local area network (LAN) is a network in which you can connect to a LAN through a wireless (radio) connection. You can opt to purchase a Sony® Wireless LAN Access Point to set up a LAN.

The wireless LAN access point is designed for building a wireless LAN environment. Because a wireless LAN configuration requires no wiring, you can operate multiple computers more freely than ever before.

Your computer is equipped with a built-in mini PCI card that allows for wireless connections. For information about your computer's wireless capabilities, see the VAIO® Computer Specifications.

For more information on Sony Wireless LAN, go to http://www.sonystyle.com/vaio.

There are two types of wireless connections:

- An infrastructure network is one that extends an existing wired local network or wide area network (WAN) to wireless devices by providing an access point. The access point bridges the wireless and wired LAN and acts as a central controller for the wireless LAN/WAN. The access point coordinates transmission and reception from multiple wireless devices within a specific range. For more information, see To connect to a wireless network (Option 1) or To connect to a wireless network (Option 2).
- A computer-to-computer (ad-hoc) network is one in which a local network is created only by the wireless devices themselves, with no other central controller or access point. Each device communicates directly with other devices in the network. You can set up an ad-hoc network easily at home. For more information, see To set up a computer-to-computer (ad-hoc) network. The computer cannot connect to the Internet in a computer-to- computer (ad hoc) network.

### To connect to a wireless network (Option 1)

Use the VAIO Wireless Utility to guide you through the set up process and provide you with more detailed information about wireless connections.

1. Make sure an access point is set up. See the instructions that accompanied the access point for more information.
2. Move the Wireless switch to **ON** (for location information, see Locating Controls and Ports).
   - If your computer comes with Bluetooth® technology[1], the **Wireless Device Switch** window appears. Select the **Enable Wireless LAN** option, and click **OK**.

   You may also double-click the **Wireless LAN-ON** or **Bluetooth-ON** icon on the Taskbar Notification area to open the **Wireless Device Switch** window.

***Wireless Device Switch***

3. Click **Start**, **All Programs,** and **VAIO Wireless Utility**. The **VAIO Wireless Utility** appears.

***VAIO Wireless Utility***

4. Follow the steps provided by the utility.

**To connect to a wireless network (Option 2)**

You may manually set up a wireless connection without the assistance of the VAIO Wireless Utility.

1. Make sure an access point is set up. See the instructions that accompanied the access point for more information.

2. Move the Wireless switch to **ON** (for location information, see "Locating Controls and Ports.").

   - If your computer comes with Bluetooth® technology[1], the **Wireless Device Switch** window appears. Select the **Enable Wireless LAN** option, and click **OK**. If your computer does not come with Bluetooth technology, proceed with step 4.

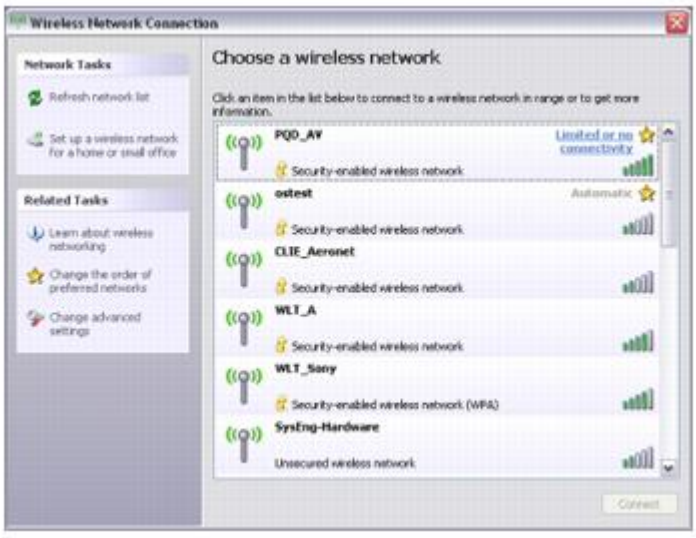
You may also double-click the **Wireless LAN-ON** or **Bluetooth-ON** icon on the Taskbar Notification area to open the **Wireless Device Switch** window.

***Wireless Device Switch***

3. Click **Start**, **Control Panel**, **Network and Internet Connections**, and then click **Network Connections**. The **Network Connections** window appears.

4. In the right panel under **LAN or High-Speed Internet**, click **Wireless Network Connection**. The **Wireless Network Connection** window appears.

***Wireless Network Connection***



5. Select the name of the wireless network to which you want to connect, and click **Connect**. If you do not see the network in the list, refresh the screen. For more information, see If the network does not appear in the list of available wireless networks.

6. When your computer locates the network, type the network key in the **Network key** box. (If necessary, ask the administrator for the key.)

7. Retype the network key in the **Confirm network key** box.

8. Click **Connect**.

***Wireless Network Connection***

**If the network does not appear in the list of available wireless networks**

1. On the **Wireless Network Connection** window, click **Change advanced settings** under **Related Tasks**. The **Wireless Network Connection Properties** dialog box appears.

2. Select the **Wireless Networks** tab, if it is not already selected.

***Wireless Network Connection Properties***

3. Click **Add** in the **Preferred networks** box. The **Wireless network properties** dialog box appears.

***Wireless Network Properties***

4. Type the name of the network (access point) you want to connect to in the **Network name (SSID)** box.

   ✍ The following steps are for networks that require a network key. If you do not know the network key or are not sure a network key is required, see the network administrator or the guide that accompanied your access point for more information.

5. If available, make sure the **Data encryption (WEP enabled)** check box is selected.
   If the **Data encryption (WEP enabled)** check box is not available:

   1. Select an authentication method from the **Network Authentication** menu.

   2. Select a data encryption method from the **Data Encryption** menu.

6. Click to cancel the **The key is provided for me automatically** check box.

7. Type the WEP network key in the **Network key** box if it is required by the selected authentication method.

8. Retype the network key in the **Confirm network key** box.

9. Click **OK**. The network name appears in the **Preferred networks** list box.

**To set up a computer-to-computer (ad-hoc) network**

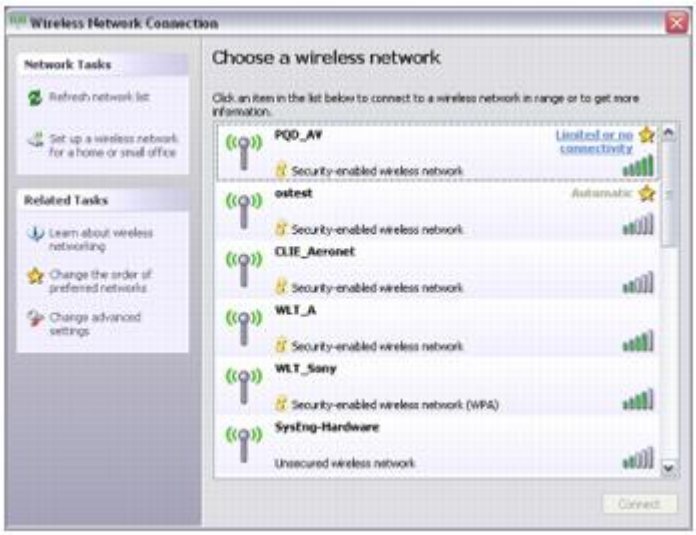
The computer-to-computer (ad-hoc) network is only supported by the IEEE 802.11b wireless standard.

1. Move the Wireless LAN switch to **ON**. For location information see "Locating Controls and Ports."

2. Click **Start**, **Control Panel**, **Network and Internet Connections**, and then click **Network Connections**. The **Network Connections** window appears.

3. In the right panel under **LAN or High-Speed Internet**, click **Wireless Network Connection**. The **Wireless Network Connection** window appears.

***Wireless Network Connection***



4. In the **Related Tasks** menu, click **Change the order of the preferred networks**. The **Wireless Network Connection Properties** dialog box appears.

***Wireless Network Connection Properties***

5. Click **Add**. The **Wireless network properties** dialog box appears.

***Wireless Network Properties***

6. Type the name of the network you want to connect to in the **Network name (SSID)** box.

7. If available, make sure the **Data encryption (WEP enabled)** check box is selected.
   If the **Data encryption (WEP enabled)** check box is not available:

   1. Select an authentication method from the **Network Authentication** menu.

   2. Select a data encryption method from the **Data Encryption** menu.

8. Click to cancel the **The key is provided for me automatically** check box.

9. Type the WEP network key in the **Network key** box if it is required by the selected authentication method.

10. Retype the network key in the **Confirm network key** box.

11. Click to select **This is a computer-to-computer (ad hoc) network; wireless access points are not used**.

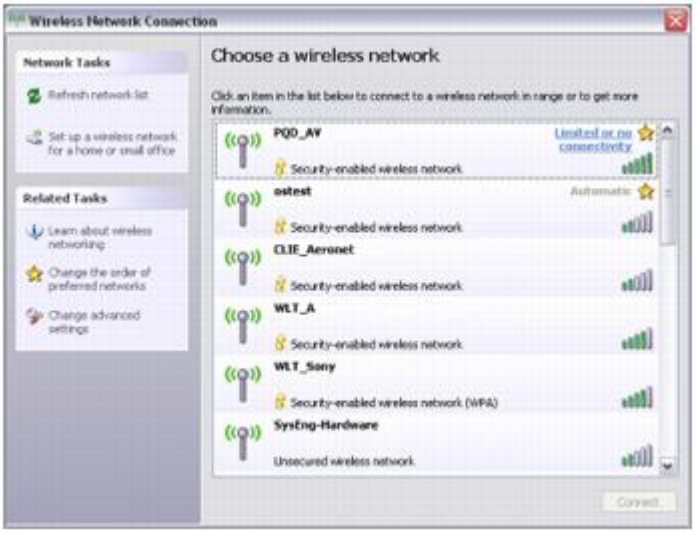
12. Click **OK**.

13. Click **OK** a second time on the **Wireless Network Connection Properties** window.

14. Repeat steps 1 to 3 on the other computer to which you want to connect.

15. On the **Wireless Network Connection** window, select the security-enabled computer-to-computer network from the list of available networks, and click **Connect**.

***Wireless Network Connection***



16. Type the network key in the **Network key** and the **Confirm network key** boxes, and press **Connect**. The network key must be the same on both computers in order to connect them.

***Wireless Network Connection***

If you enter the network key incorrectly, the computer will appear to connect to the host computer but will be unable to communicate with the host computer or any other computer on the network.

17. The Wireless Network Connection window updates to show the computer-to-computer (ad-hoc) network in which you are connected.

**To disconnect from a wireless network**

- For computers with built-in wireless LAN functionality, move the Wireless LAN switch to OFF.

**Turning off the wireless LAN functionality while accessing remote documents, files, or resources may result in data loss.**

**To disconnect from a computer-to-computer (ad-hoc) network**

1. Click **Start**, **Control Panel**, **Network and Internet Connections**, and then click **Network Connections**. The **Network Connections** window appears.
2. In the right panel under **LAN or High-Speed Internet**, click **Wireless Network Connection**. The **Wireless Network Connection Status** window appears.
3. Click **Properties**. The **Wireless Network Connection Properties** dialog box appears.
4. On the **Wireless Networks** tab, click **Advanced**. The **Advanced** dialog box appears.
5. Click to select **Any available network (access point preferred),** if it is not already selected, and click **Close**.
6. Click **OK** to close the **Wireless Network Connection Properties** window, and click **Close** on the **Wireless Network Connection Status** window.
7. Move the Wireless LAN switch to **OFF**.

[1] Bluetooth technology is available on selected models only.

## Checking your network connection status

Whether you have a wireless, Ethernet, or dial-up connection, you can check the status of that connection.

### To check your network connection status

1. Click **Start** on the taskbar, and click **Control Panel**, **Network and Internet Connections**, and **Network Connections**. The **Network Connections** window appears.

2. Click the enabled network connection to open the connection status window.

***Wireless Network Connection Status***

## Bluetooth Connections

Bluetooth® wireless technology provides short-range connectivity without the need for cabling. When the Bluetooth functionality is turned on, your computer can exchange data and images with other compatible Bluetooth devices within a range of up to 32 feet[1].

With Bluetooth technology, your computer transmits a radio frequency of 2.4 GHz. Sensitive locations, such as hospitals and airplanes, may have restrictions on the use of Bluetooth devices, due to radio interference. Check with facility staff to verify that use of the Bluetooth feature on your computer is permitted.

[1] Actual range depends on environmental and other factors.

## Using Bluetooth technology

Using Bluetooth® technology, your computer can communicate with:

- Compatible devices with integrated Bluetooth functionality, such as computers, mobile telephones, personal digital assistants (PDAs), mice, and keyboards.
- Compatible devices with an installed Bluetooth adapter, such as computers, printers, mice, and keyboards.

✍ Some Bluetooth devices may not work with your computer, depending on the type of equipment, software version, and other factors. Before purchasing a Bluetooth device, check its operating environment requirements.

A computer with Bluetooth features can:

- Send files and images between compatible devices
- Exchange vCards (electronic business cards)
- Connect to the Internet using a dial-up connection
- Print files and images on a printer equipped with Bluetooth technology
- Exchange addresses with compatible cellular phones and PDAs

## Establishing wireless connections

The "Switch wireless devices" window enables you to select a wireless connection: Bluetooth, Wireless LAN, or Bluetooth and Wireless LAN function.

Bluetooth® technology is designed for a short-range connection of up to 32 feet (10 meters), while Wireless LAN technology has a wider connection range of up to 328 feet (100 meters). The actual range of wireless LAN technology is dependent on many factors including the features and capabilities of a wireless access point (if used), environmental conditions, and other factors. Your computer is capable of both Bluetooth and Wireless LAN connections. For more information about Wireless LAN, see Using wireless network connections (selected models only).

### To establish a Bluetooth connection

1. On your computer, move the WIRELESS switch to **ON**.

   The **Wireless Device Switch** window appears.

   You may also double-click the **Wireless LAN-ON** or **Bluetooth-ON** icon on the Taskbar Notification area to open the **Wireless Device Switch** window.

***Wireless Device Switch***

2. Click to select the **Enable Bluetooth Device** option, and then click **OK**.
3. Click **Start**, **Control Panel**, **Network and Internet Connections**, and then click **Bluetooth Devices**.
4. When the **Bluetooth Devices** window appears, select the **Options** tab.

***Bluetooth Devices***

5. In the **Discovery** box, click to select **Turn discovery on** if it is not already selected.
6. In the **Connections** box, click to select **Allow Bluetooth devices to connect to this computer** if it is not already selected, and then click **Apply**.

7. Select the **Devices** tab, and click **Add** to search for available Bluetooth devices. The **Add Bluetooth Device Wizard** appears.

***Add Bluetooth Device Wizard***

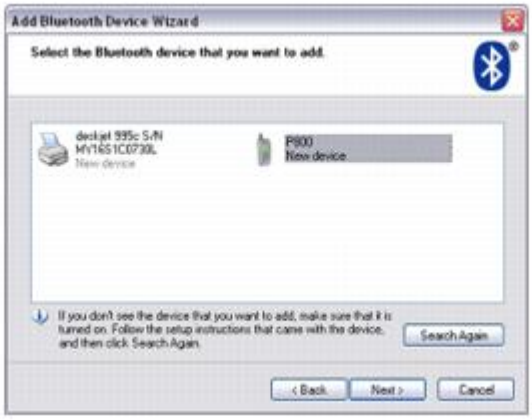
✍ Your computer will not detect a Bluetooth device unless the device is turned on and the Bluetooth function is enabled. Some keyboards and mice also require that you push a button located on the bottom of the device to enable connectivity.

8. Click to select the **My device is set up and ready to be found** check box, and then click **Next**.

   The wizard searches for available Bluetooth devices.

9. Click to select the available device that you want to add, and then click **Next**.

***Add Bluetooth Device Wizard***



10. Select a passkey option.

    A passkey is a private code entered by the user to enable two Bluetooth devices to communicate. When the same code is entered on both devices, communication becomes possible. The passkey may be changed at each communication session. If a communication session is disconnected, you need to re-establish the passkey. See the documentation that accompanied your device for more information.

***Add Bluetooth Device Wizard***

11. Click **Next**.

Depending on the option that you selected, the computer either searches for the network or instructs you to enter the passkey on the Bluetooth device to which you want to connect. If the passkey is not entered within approximately 30 seconds, authentication fails.

12. Once you successfully connected to the Bluetooth Device, click **Finish** to close the wizard.

***Add Bluetooth Device Wizard***

## Renaming the Bluetooth USB Device

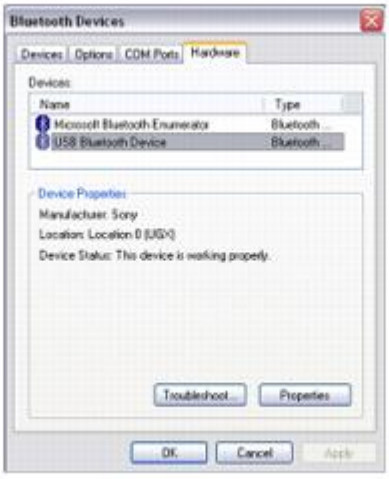
The Bluetooth® device installed on your computer has an assigned name that you may not recognize. Renaming this device makes it easy for you to identify your computer during authentication.

**To rename the Bluetooth USB device**

1. From the **Start** menu, click **Control Panel.**
2. Click **Printers and Other Hardware**, and then click **Bluetooth Devices**.

   The **Bluetooth Devices** window appears.
3. Click the **Hardware** tab.

***Bluetooth Devices***



4. Select **USB Bluetooth Device**, and then click **Properties**.

   The **USB Bluetooth Device Properties** window appears.
5. Click the **Advanced** tab, and type a new name in the **Name** text box.

***USB Bluetooth Device Properties***

6. Click **OK**. To see the new USB Bluetooth Device name, turn off the Bluetooth feature by moving the WIRELESS switch on your computer to **OFF**, and then restart it by moving the WIRELESS switch to **ON**.

## Setting Bluetooth preferences

You have the option to set hardware preferences for discovery, connection, and notification.

### To access the Options window

1. Click **Start**, **Control Panel**, **Printers and Other Hardware**, and **Bluetooth Devices**.

   The **Bluetooth Devices** window appears.

2. Select the **Options** tab.

***Bluetooth Devices***

3. Set your desired preferences, and click **OK**.

✍ For more information about preferences, click the **Bluetooth settings** link near the bottom of the window.

## Disconnecting a Bluetooth device

**To disconnect or remove a device**

1. Click **Start**, **Control Panel**, **Network and Internet Connections**, and then click **Bluetooth Devices**.

   You may also click the Bluetooth icon  on the Taskbar Notification area.

2. When the **Bluetooth Devices** window appears, select the **Devices** tab if it is not already selected.

3. Click to select the Bluetooth device from the devices list, and then click **Remove**. This may take a few seconds to complete.

4. Click **OK** to close the **Bluetooth Devices** window.

## Additional information

- The data transfer rate varies, depending on the following conditions:
  - Obstacles, such as walls, located between devices
  - Distance between devices
  - Material used in walls
  - Proximity to microwaves and cordless telephones
  - Radio frequency interference and other environmental conditions
  - Device configuration
  - Type of software application
  - Type of operating system
  - Use of both Wireless LAN and Bluetooth functions at the same time on the computer
  - Size of file being exchanged
- The 2.4 GHz radio frequency used by Bluetooth® and wireless LAN devices is also used by other devices. Bluetooth devices incorporate technology that minimizes interference from other devices using the same wavelength, however, communication speed and connection range may be reduced. Interference from other devices may also stop communication altogether.
- Large files may occasionally become corrupted due to radio wave interference during continuous transfer.
- All Bluetooth devices must be certified to make sure that the applicable standard requirements are maintained. Even if standards are met, individual device performance, specifications, and operation procedures can vary. Data exchange may not be possible in all situations.
- To protect your privacy and conserve power, disconnect your Bluetooth and wireless connections when you are not using them.

## Creating CDs / DVDs with Sony Software

Your computer plays and records CDs and DVDs, depending on the model you purchased. Check your specifications for the type of optical drive installed on your computer. Depending on the computer model and particular configuration you purchased, your computer may not include all of the software programs listed below.

## Creating CDs / DVDs with Sony Software

Your computer plays and records CDs and DVDs, depending on the model you purchased. Check your specifications for the type of optical drive installed on your computer. Depending on the computer model and particular configuration you purchased, your computer may not include all of the software programs listed below.

## Picture & Video DVDs

### Click to DVD

Make picture or personal video DVDs. Use JPEG, BMP, of TIFF files for slide shows; import MPEG, AVI, or Microsoft® DVR-MS files for video, or capture footage from an i.LINK / IEEE 1394 camera or analog source.

## Music CDs

### SonicStage

Make music CDs from MP3, WMA, WAV, and OpenMG files; create ATRAC CDs for your Sony ATRAC CD Walkman; or backup your existing collection of discs.

### SonicStage Mastering Studio

Make music CDs from your collection of vinyl records or cassette tapes.

### Sonic RecordNow!

Make music CDs from MP3, WMA, WAV, and CDA files, or backup your existing collection of discs.

## Data Backup

**Sonic RecordNow!**

Make custom data CDs or DVDs with drag-and-drop ease, or backup your existing collection of discs.

## Inserting and Ejecting CDs or DVDs

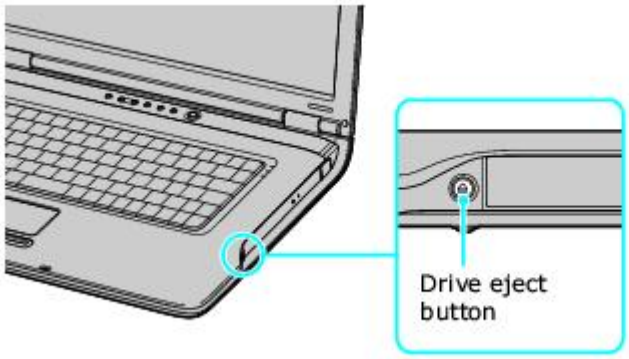
Avoid using adhesive labels to identify your CDs or DVDs. Adhesive labels may damage the optical drive if they come off while the disc is in the drive.

**To insert a disc**

1. Turn on the computer or exit a power saving mode (Standby or Hibernate) if one is active. For more information, see Using power saving modes.
2. Press the drive eject button to open the drive tray.

There are two drive eject buttons: one on the cover of the optical drive and one next to the optical drive. Use the drive eject button located next to the optical drive to open the optical drive tray.

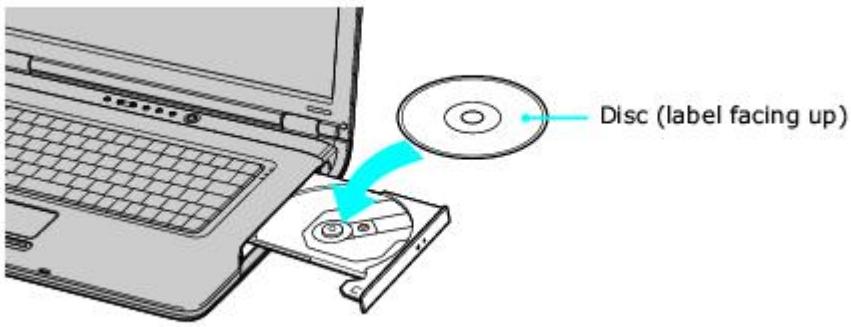
***Opening the Drive Tray***



3. When the drive tray slides out, place a disc on the drive tray with the label facing up.

You can play some DVDs on both sides. Insert this type of DVD with the label of the side you want to play facing up.

***Inserting a Disc***



4. Press the disc onto the tray until the disc clicks securely into place.

**If you do not seat the disc firmly over the hub, the disc may come loose while it is in the drive. A loose disc may damage the optical drive and make opening the drive tray difficult.**

5. Push the drive tray gently to close it. The Busy indicator on the drive cover blinks while your computer is reading data from the drive.

**To eject a disc**

1. Turn on the computer or exit a power saving mode (Standby or Hibernate) if one is active. For more information, see Using power saving modes.
2. Close all programs that access the optical drive, and wait for the Busy indicator on the drive cover to turn off.

3. Press the Eject button on the drive cover to open the drive tray. The drive tray slides out.

✍ If the Eject button does not work, turn off the computer and insert a thin, straight object (such as a paper clip) into the manual eject hole next to the Eject button.

4. Lift the disc from the drive.

5. Push the drive tray gently to close it.

## Copying and Playing CDs and DVDs

Your computer plays and records CDs and DVDs, depending on the model you purchased. Check your specifications for the type of optical drive installed on your computer and use the table below to see which types of media your optical drive supports.

**Do not remove the optical drive when the computer is in a power saving mode (Standby or Hibernate). Doing so may cause the computer to malfunction.**

If you plan to use an external optical drive, connect the drive before you launch any preinstalled CD/DVD program.

## Playing CDs

Before you play an audio CD, you may need to enable your computer's audio feature.

### To enable the audio feature

1. Click **Start** on the Windows® taskbar, and then click **Control Panel**, **Performance and Maintenance**, and **System**. The **System Properties** dialog box appears.

   ✍ As a shortcut, you can press **Fn** + **Windows** key + **Insert** to open the **System Properties** dialog box.

2. Select the **Hardware** tab, and in the **Device Manager** box, click **Device Manager**. A window with a listing of the computer's hardware devices appears.
3. Double-click the icon for the optical drive device to open the submenu.
4. Double-click the listed drive, and select the **Properties** tab.
5. Click to select the **Enable digital CD audio for this CD-ROM device** check box if it is not already selected.
6. Click **OK**.

### To adjust the volume for playing CDs and DVDs

Some programs have built-in volume controls, which you can adjust. If there are no volume controls, then adjust the volume of your computer's built-in speakers by using the Volume buttons, which are located above the keyboard.

- Press the left Volume button to decrease the volume.
- Press the right Volume button to increase the volume.

  ✍ An on-screen display may appear, notifying you when a change occurs.

- Use the Volume icon.

  1. Double click the **Volume** icon on the **Taskbar Notification** area. The **Master Volume** dialog box appears.
  2. In the **Master Volume** and **Wave** columns, move the **Volume** sliders up to increase volume and down to decrease volume.

### To play an audio CD

1. Insert the disc into the optical drive.
2. If nothing appears on the desktop once you insert an audio CD disc, then click **Start**, point to **All Programs**, and click to open a CD program, such as SonicStage® software.
   If the **Audio CD** window appears, click to select an option.

## Copying files to CDs

Before you copy files to a CD-RW or CD-R disc, read the following notes to avoid a computer malfunction and ensure the best results:

- Deactivate the screen saver and exit anti-virus software.
- Deactivate memory-resident disc utilities to avoid data loss.
- Disable the FindFast program if it is installed on your computer. Click **Start** and point to **All Programs** to see a list of programs on your computer.
- Connect and use the AC adapter to power your computer or make sure your battery is at least 50 percent charged. See Powering Your Computer for more information.

**To copy files to a CD-RW or CD-R**

1. Insert a blank CD-R or CD-RW disc into the optical drive.
   If the **CD Drive** window appears, click **Take no action**.

***CD Drive***

2. Open Windows Explorer by pressing the **Windows** key and the **E** key simultaneously.
3. In the **Folders** panel on the left, locate the file(s) or folder(s) you want to copy and either:
   - Right-click the file(s) or folder(s), point to **Send To**, and click the optical drive[1] name.
   - Drag the file(s) or folder(s) onto the optical drive icon in the **Files Stored on This Computer** panel.
4. Close Windows Explorer.
5. Click **Start**, and **My Computer**.
6. Click the optical drive icon under **Devices with Removable Storage**. A new window appears with the file(s) or folder(s) you want to copy listed under **Files Ready to Be Written to the CD**.
7. In the **CD Writing Tasks** box, click **Write these files to CD**.
8. Follow the instructions on the **CD Writing Wizard**.

***CD Writing Wizard***

**Do not strike or shake the computer while writing data to a disc.**

[1] The read/write drive letter designation may vary, depending on your system's hardware configuration.

## Playing DVDs

You can play DVDs in your computer's optical drive and view the video on a TV or other multimedia display.

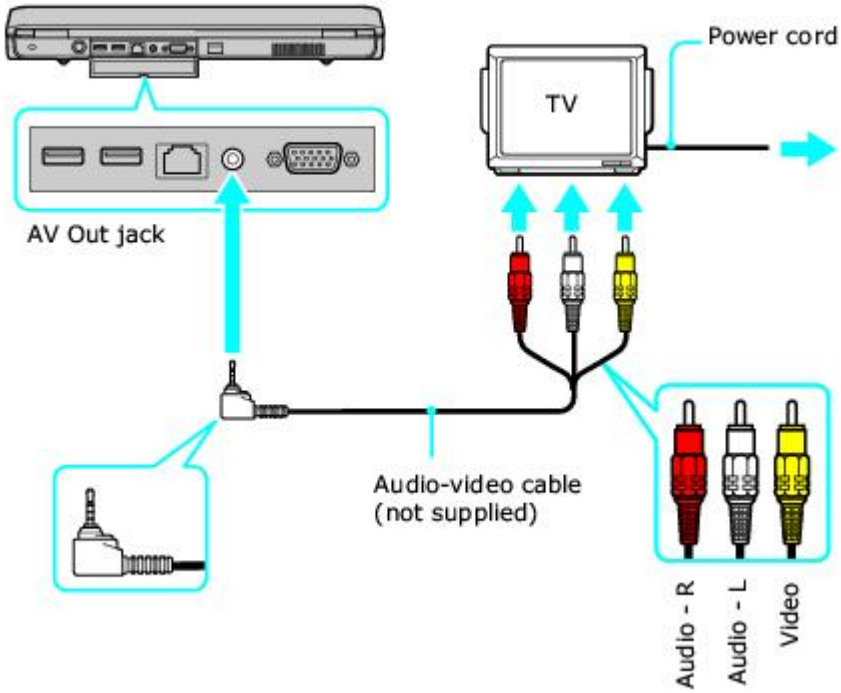
## Connecting your computer to a TV

Your computer is equipped with an AV Out jack, which enables you to connect your computer to a TV. To locate the AV Out jack on your computer, see Locating Controls and Ports.

### To connect a TV to your computer

1. Connect one end of an audio-video (AV) cable (not supplied) into the A/V OUT jack.
2. Connect the other end of the AV cable into the audio and video ports on the TV.

***Connecting a TV to the Computer***



3. Switch the TV input channel to external input.

### To connect a TV to the port replicator

Your computer does not recognize more than one TV connection at a time. If you connect a device using both the standard video cable and an S Video cable, the S Video connection takes precedence over the standard video connection.

The Plug and Display feature enables you to connect an external display to the computer and instantly view an image on the connected display. If you use more than one TV connection at the same time, Plug and Display may not work properly.

Your TV may have standard video or S Video connection capability. Select one option from the following instructions.

### Option 1

1. Connect an S Video cable (optional) directly into the S Video Out jack on your port replicator.
2. Connect the other end of the S Video cable into the appropriate port on your compatible TV.
3. Connect an audio cable with double RCA plugs at each end (optional) into the composite audio L and R Out jacks on your port replicator, and into appropriate ports on your TV.
4. Switch the TV input channel to external input.

### Option 2

1. Connect a video cable (optional) directly into the Video jack on your port replicator.
2. Connect an audio cable with double RCA plugs at each end (optional) into the composite audio L and R Out jacks on the port replicator.

3. Connect the other ends of an audio cable with double RCA plugs at each end into the appropriate jacks on your compatible TV.

4. Switch the TV input channel to external input.

✍ See the guide that accompanied your TV for information on how to switch to external input.

## Playing DVDs on a TV

**Do not remove the optical drive when the computer is in a power saving mode (Standby or Hibernate). Doing so may cause the computer to malfunction.**

Connect the external optical drive if you plan to use one.

**To play a DVD**

1. Close all open programs.
2. Disable the screen saver and the virus checker.
3. Connect the TV to the computer. See Connecting your computer to a TV and Selecting a display for more information.
4. Open a preinstalled DVD program by following these steps:
    1. Click **Start** on the taskbar, and point to **All Programs**.
    2. Select a DVD software program to play the DVD. For instructions on how to use a program, see the help guide included with the DVD program.
5. Select a display.
    1. Press the **Fn+F7** keys to view the image on either the computer screen (LCD) or the TV. See Selecting a display for more information.
6. Insert the DVD into the optical drive.

Systems equipped with a CD-RW/DVD-ROM drive can read most DVD-R media.

**Some discs recorded at 20 or 24 bits may produce noise while playing. If you have audio devices connected, this may damage your hearing and the speakers. Reduce the volume before playing a DVD.**

**Do not switch power saving modes while the computer is playing a DVD.**

**Do not use memory-resident utility software to speed up disc access when playing a DVD. This may cause the computer to malfunction.**

## Disconnecting your computer from a TV

Simply unplug the audio-video (AV) cable from the AV Out jack on the computer.

## Playing DVDs on your computer

Your computer is equipped with an optical drive that enables you to watch DVDs and most DVD-R discs on your computer.

**To play a DVD**

1. Close all open programs.
2. Insert the DVD into the optical drive.
3. Open a preinstalled DVD program by following these steps:
    1. Click **Start** on the taskbar, and point to **All Programs**.
    2. Select a DVD software program to play the DVD. For instructions on how to use a program, see the help guide included with the DVD program

 **Some discs recorded at 20 or 24 bits may produce noise while playing. If you have audio devices connected, this may damage your hearing and the speakers. Reduce the volume before playing a DVD.**

**Do not switch power saving modes while the computer is playing a DVD.**

**Do not use memory-resident utility software to speed up disc access when playing a DVD. This may cause the computer to malfunction.**

## Copying files to DVDs (available on selected models only)

Use the table shown on Copying and Playing CDs and DVDs to see which type of DVD media your computer supports.

### To copy files to a DVD-R or DVD-RW

1. Connect the AC adapter to the computer. See Connecting the AC adapter for more information.
2. Insert the disc into the optical drive. See Inserting and Ejecting CDs or DVDs for more information.
3. Click **Start**, **All Programs**, and select the DVD software program you want to use from the submenu.

You can also reference the online help guides supplied with the program.

**Do not strike or shake the computer while copying files to a disc.**

# Printer Connections

Your computer is compatible with many popular printers. However, to ensure the best performance, printers must be compatible with the Microsoft® Windows® operating system installed on your computer.

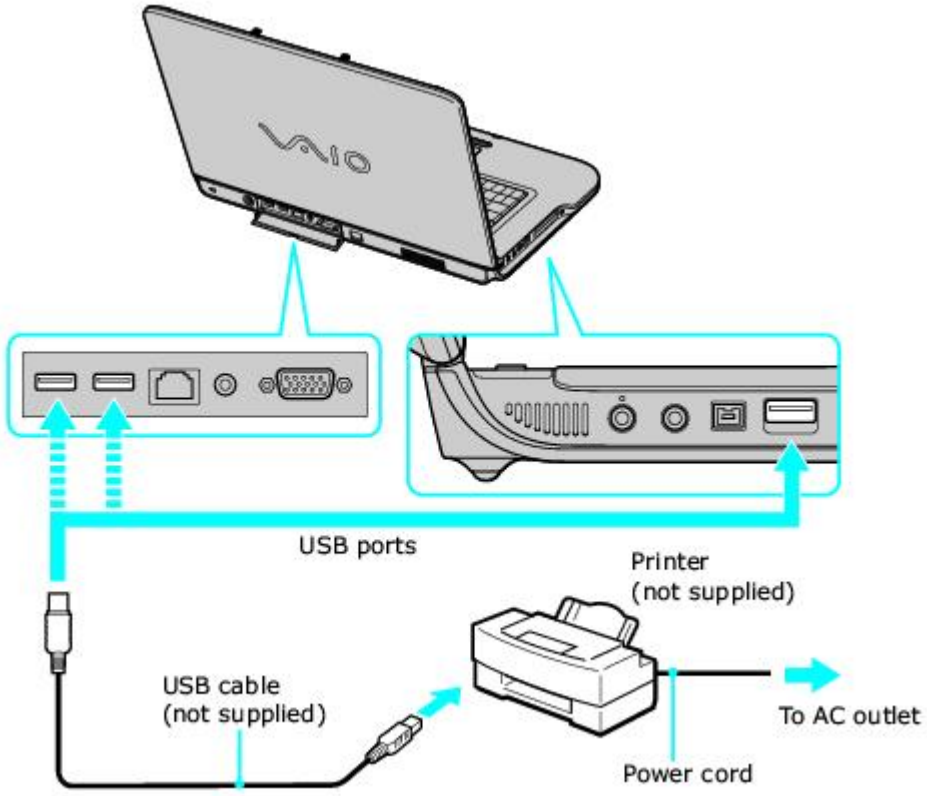
# Connecting a USB Printer

You can connect a universal serial bus (USB) printer to your computer. The New Hardware Wizard enables you to easily install the printer software, but some printers require separate driver software installation. See the instructions that accompanied your printer for more information.

**To connect a USB printer**

1. Plug the USB cable into the USB port on your computer or port replicator, if applicable. See "Locating Controls and Ports" in the "Setting Up" chapter of your printed VAIO® Computer Quick Start.
2. Plug the other end of the USB cable into the USB port on the printer. The **Found New Hardware Wizard** appears.

***Connecting a USB Printer***



See the guide that accompanied the printer for more information on its installation and use.

## Connecting a Parallel Printer

You can connect a parallel port printer to your port replicator if your computer came with one. The new hardware wizard enables you to easily install the printer software, but some printers require separate driver software installation. See the instructions that accompanied your printer for more information.

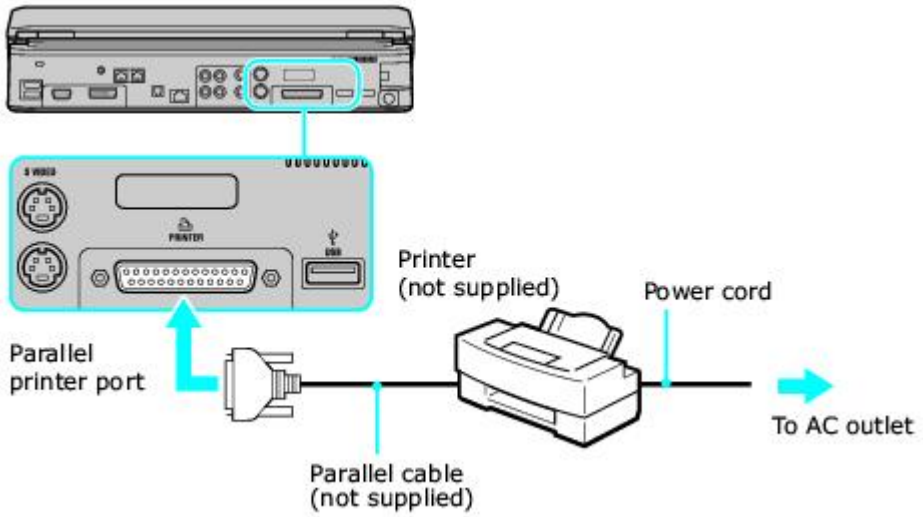
The printer port on this port replicator is intended for printer connections only.

The port replicator must use power from the AC adapter in order to provide parallel port printer connection. Do not use battery power when connecting a printer.

## To connect a parallel port printer

1. Plug the printer cable into the Printer port on your computer or port replicator, if applicable. See Locating Controls and Ports for more information.
2. Plug the other end of the printer cable into the port on the printer.
3. Restart your computer by clicking **Start**, **Turn Off Computer**, and **Restart**. If the **New Hardware Wizard** appears, follow the on-screen instructions.
4. Make sure the computer recognizes the printer. Follow these steps:
   - Click **Start**, **Control Panel**, **Printers and Other Hardware**, and then **Printers and Faxes**.
     If the computer recognizes the printer, it will be listed in the **Printers and Other Hardware** window.
     If the computer does not recognize the printer, you may need to install the printer driver software. See the guide that accompanied the printer for more information.

***Connecting a Parallel Printer***



See the guide that accompanied the printer for more information on its installation and use.

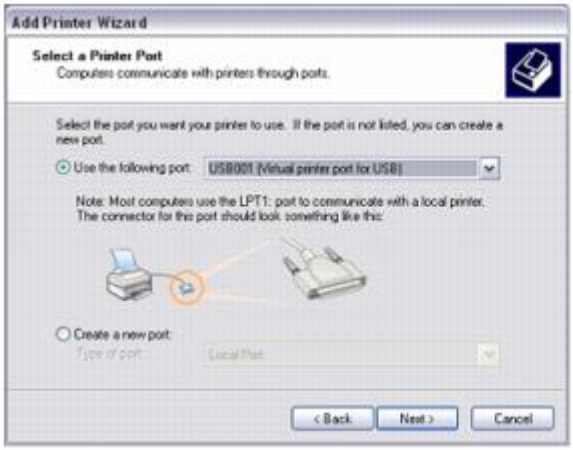
## Configuring printer settings

If you cannot connect the parallel port printer to the port replicator after following the instructions in To connect a parallel port printer, you may need to manually configure your printer settings. The following instructions explain how to configure your settings and complete the installation of your printer.

### To configure printer settings for a parallel port printer

1. Plug the printer cable into the Printer port on your port replicator.
2. Plug the other end of the printer cable into the port on the printer.
3. Turn the printer on, if it is not already on.
4. Click **Start**, and select **Control Panel**, **Printers and Other Hardware**, and then **Add a Printer**.
5. When the **Add Printer Wizard** appears, click **Next** to start the installation process.
6. Select the **Local printer attached to this computer** option, if it is not already selected, and deselect the **Automatically detect and install my Plug and Play printer** option. Click **Next**.
7. When the **Select a Printer Port** window appears, select the **Use the following port** option, if it is not already selected, and click to select **USB001 (Virtual printer port for USB)** from the drop-down menu. Click **Next**.

***Selecting a Printer Port***



8. Select the manufacturer and the model of your printer. This information should be included with the documentation that accompanied your printer. Click **Next**.
9. Select a name for the connected printer, if one is not already assigned, then click **Next**.
10. Select **Yes** or **No** to print a test page from the connected printer, and click **Next**.
11. Click **Finish** to complete the installation process and close the wizard.

For additional information about installing and using your printer, see the documentation that accompanied your printer.

## Disconnecting a Printer

You can disconnect the printer cable when the computer is on or off. Disconnecting a printer when the computer is in a power saving mode (Standby or Hibernate) may cause the computer to malfunction.

**To disconnect a printer**

- Unplug the printer cable from the computer.

# Using Memory Stick Media

Your VAIO® computer is equipped with a Memory Stick® slot that supports certain types of Memory Stick® media.

## About Memory Stick media

Memory Stick® media are a compact, portable, and versatile data storage media designed for exchanging and sharing digital data with compatible devices. You can store different data formats on a single Memory Stick media. The following types of Memory Stick media are available, but compatibility with your computer can vary.

- MagicGate Memory Stick media — Provides copyright protection with authentication and encryption, using Sony® MagicGate technology. Authentication ensures that protected content is only transferred between compliant devices and media. Protected content can be recorded and transferred in an encrypted format to prevent unauthorized duplication or playback.

- Memory Stick PRO media — Provides MagicGate copyright protection and high-speed transfer features when used with compatible Memory Stick PRO devices. VAIO® computers support Memory Stick PRO media for data storage purposes only. Currently, MagicGate technology features, such as authentication and encryption, are not available.

- Memory Stick Duo media — Provides the same features and benefits of MagicGate Memory Stick media, in a form that is 1/3 smaller in size.

- Memory Stick media — Provides data storage only. The Memory Stick media does not provide MagicGate technology or high-speed data transfer.

Currently, Sony® SonicStage and OpenMG software are not compatible with Memory Stick PRO media. Sony suggests using only MagicGate Memory Stick media to store and transfer any data created with SonicStage or OpenMG software.

Visit the Sony Computing Support Web site at http://www.sony.com/pcsupport regularly for the latest information on Memory Stick PRO media.

 Memory Stick media do not support AVI video file playback directly from the media. Copy the video file to your hard disk drive and then play back the file.

## Inserting Memory Stick media

Before using Memory Stick® media, back up important data. The media slot accommodates only one Memory Stick media at a time.

### To insert Memory Stick media

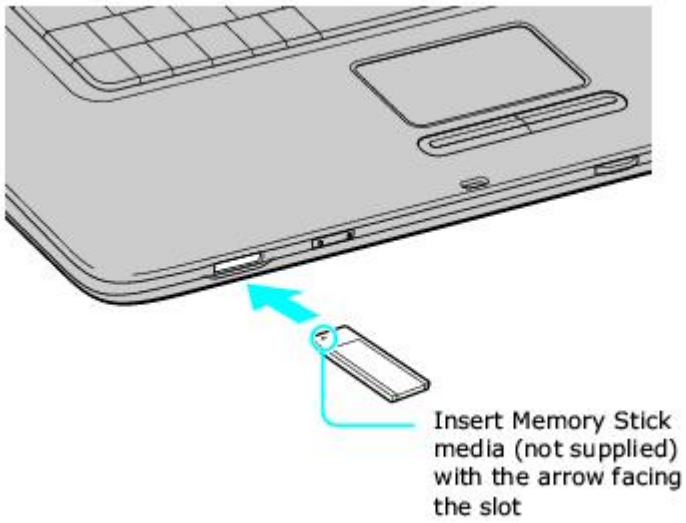
1. Insert the Memory Stick media with the arrow facing up and toward the Memory Stick media slot.

   **Do not insert more than one Memory Stick media into the Memory Stick media slot. Inserting the media improperly may damage the computer.**

   The Memory Stick media slot supports Memory Stick Duo media with or without the adapter.

2. Carefully slide the Memory Stick media into the slot until it clicks in place. The Memory Stick media indicator briefly blinks.

***Inserting Memory Stick Media***



## Viewing the contents

Depending on the model you purchased, the Sony Memory Stick window may appear when you insert a Memory Stick® media. From this window, you can choose to view, print, copy or organize your images or data stored on the Memory Stick media. If the Sony Memory Stick window does not appear when you insert your Memory Stick media, then follow these steps:

### To view the contents

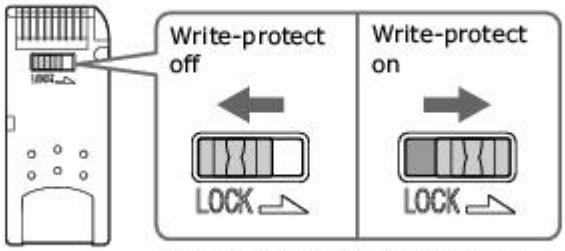
1. From the **Start** menu, click **My Computer**. The **My Computer** window appears.
2. Click **Sony MemoryStick**. The **Sony MemoryStick** window appears, displaying the contents stored on the Memory Stick media.

## Protecting data on Memory Stick media

Some Memory Stick® media are equipped with a write-protect tab[1]. The write-protect tab prevents accidental changes to information recorded on your Memory Stick media. When you slide the write-protect tab to the LOCK position, your Memory Stick media is write-protected. You cannot delete, copy, or save information on the media while the write-protect tab in the LOCK position. When you slide the tab to the un-LOCK position, you can write to or modify your Memory Stick media's contents.

| | |
|---|---|
| Write-protect off | Data can be saved on the Memory Stick media. |
| Write-protect on | Data can be read from but not saved on the Memory Stick media. |

### *Using the Write-Protect Tab*



(Back of Memory Stick media)

[1] Some Memory Stick media do not have a write-protect tab, and the location or position of the write-protect tab may vary, depending on the type of Memory Stick media. See the information sheet provided with your Memory Stick media.

## Formatting Memory Stick media

Memory Stick® media is formatted for immediate use when you purchase it. If you need to reformat Memory Stick media, use the Memory Stick Formatter that is provided with the media. For more information about using Memory Stick Formatter, refer to Formatter Help.

**Formatting Memory Stick media erases all data, including music data, previously saved to it. Before you reformat Memory Stick media, confirm that the media does not contain files you want to keep. Back up important data before formatting the media.**

### To format Memory Stick media

1. Insert the Memory Stick media into the Memory Stick media slot. See To insert Memory Stick media for more information.
2. From the **Start** menu, click All Programs, select **Memory Stick Utility, and click Memory Stick Formatter**. The **Memory Stick Formatter** window appears.
3. Click **Start Format**, and follow the on-screen directions.
4. After formatting, click **Exit**.

## Removing Memory Stick media

If the Memory Stick® media is removed prematurely, a blue screen with a message may appear prompting you to continue or exit. Reinsert the media into the slot and press **Enter** to continue. This enables the media to finish reading or writing data.

### To remove Memory Stick media

1. Wait a minimum of 10 seconds after the Memory Stick media finishes reading or writing data before removing the media.
2. Make sure the access light is off.
3. Push the Memory Stick media in toward the computer.
4. When the Memory Stick media ejects, pull it out.

Be careful when removing the Memory Stick media, as it may not eject completely from the slot.

## Using a Floppy Disk Drive

You can connect a floppy disk drive to your computer. The floppy disk drive enables you to read or write data to a floppy disk.

## Using a Floppy Disk Drive

You can connect a floppy disk drive to your computer. The floppy disk drive enables you to read or write data to a floppy disk.

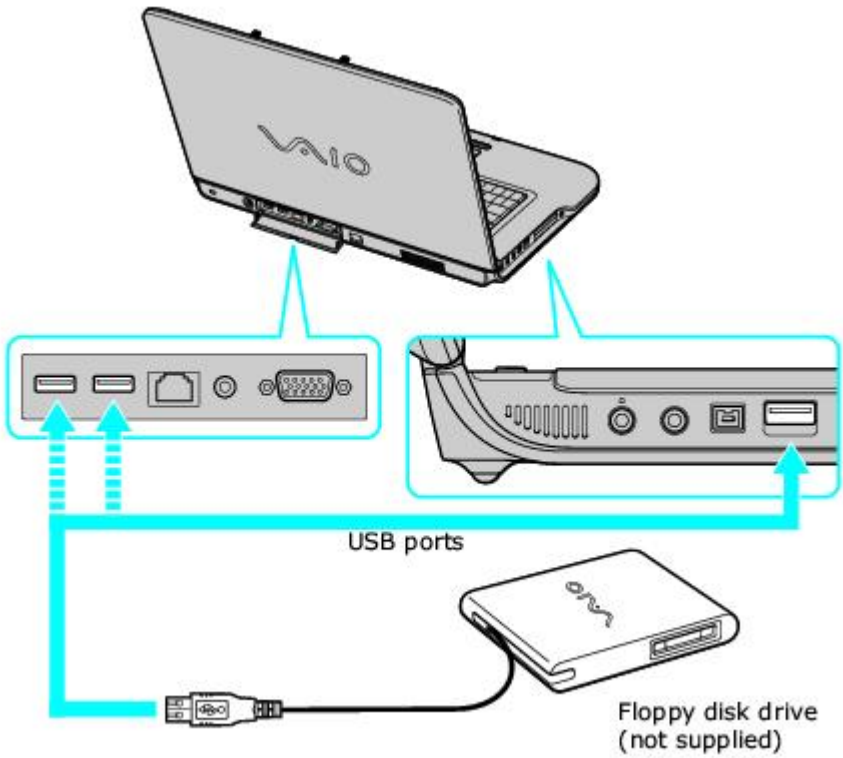
## Connecting a floppy disk drive

You can connect a floppy disk drive when your computer is on or off. Connecting the drive when the computer is in a power saving mode (Standby or Hibernate) may cause the computer to malfunction.

### To connect a USB floppy disk drive

1. Close any active programs to prevent data loss.
2. Plug the USB cable (with the USB icon facing upward) into the USB port . The **Found New Hardware** pop-up message appears.

***Connecting a Floppy Disk Drive***



## Inserting and removing floppy disks

To write data to a disk, use one that is not write-protected or disable the write-protect feature. The floppy disk drive cannot write data to a disk if it is inserted into the drive improperly.

### To insert a floppy disk

1. Hold the floppy disk with the label facing up.
2. Push the floppy disk into the drive until it clicks into place.

***Inserting a Floppy Disk***

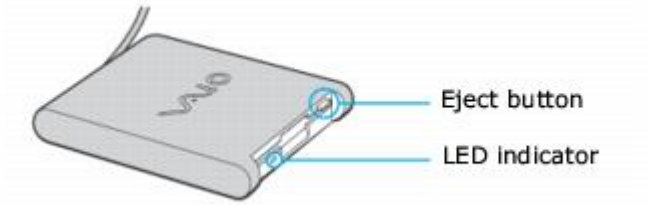
Do not open the shutter manually and touch the surface of the floppy disk.

### To remove a floppy disk

1. Close all programs that access the floppy disk.
2. Wait for the LED indicator on the floppy disk drive to turn off.
3. Push the Eject button, and remove the disk.

To avoid losing data, do not push the Eject button when the LED indicator is on.

***Removing a Floppy Disk***



## Protecting floppy disks

- Do not open the shutter manually or touch the surface of the floppy disk.
- Keep floppy disks away from magnets, direct sunlight, and heat sources.

## Disconnecting a floppy disk drive

You can disconnect a USB floppy disk drive when the computer is on or off. Disconnecting the drive when the computer is in a power saving mode (Standby or Hibernate) may cause the computer to malfunction.

1. Close all programs accessing the floppy disk drive.
2. Double-click the **Safely Remove Hardware** icon  on the taskbar. The **Safely Remove Hardware** window appears.
3. Select the floppy disk drive in the **Hardware devices** window, if it is not already selected.
4. Click **Stop**. The **Stop a Hardware device** window appears.
5. Make sure the floppy disk drive is selected, and click **OK**. A message appears stating it is now safe to remove the hardware device.
6. Remove the floppy disk drive from the computer.

## Storing a floppy disk drive

Fold the floppy disk drive cable and connector into the side compartment on the floppy disk drive.

***Storing a Floppy Disk Drive***

# Using PC Cards

Your computer includes one PC Card slot. A PC Card enables you to connect devices such as an optical drive or floppy disk drive.

See your VAIO® Computer Specifications for the type of PC Card that is compatible with your computer. These slots are compatible with CardBus. You do not need to turn off your computer to insert or remove a PC Card.

# Inserting PC Cards

## To insert a PC Card

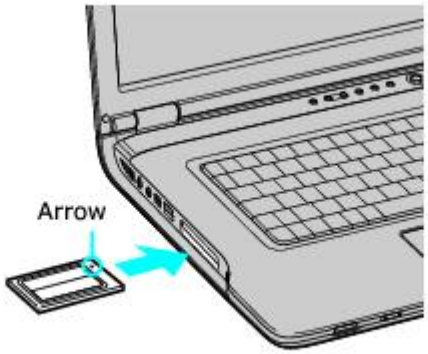
1. Make sure the front label of the PC Card is facing up.
2. Push the PC Card gently into the slot. The system automatically detects the PC Card.

**Do not force a PC Card into the slot; this may damage the connector pins.**

**When a PC Card is inserted, do not place your computer in a bag or case. Pressure or shock to a PC Card may damage your computer.**

**Touching the head of the PC Card will not damage the connector pins, but damage may occur if the head of the PC Card is sticking out of the PC Card slot while the computer is being transported.**

***Inserting a PC Card***



Insert the PC Card (not supplied) with the arrow facing the slot

## Removing PC Cards

You can remove PC Cards while the computer is on or off. PC Cards draw power from the computer when they are inserted into the PC Card slot, whether or not you use the card.

If you are not using your PC Card and you are using a battery as a power source, remove the PC Card from the PC Card slot to conserve battery power.

## To remove a PC Card while your computer is on

1. Double-click the **Safely Remove Hardware** icon  on the taskbar. The **Safely Remove Hardware** dialog box appears.
2. Click to select the PC Card in the **Hardware devices** window, if it is not already selected.
3. Click **Stop**. The **Stop a Hardware device** window appears.
4. Make sure the PC Card is selected, and click **OK**. A message appears stating it is safe to remove the hardware device.
5. Push the Release button. The Release button pops out.
6. Push the Release button a second time. The PC Card pops out.
7. Gently pull the card out of the slot.

### To remove a PC Card while the computer is off

1. Push the Release button once. The Release button pops out.
2. Push the Release button a second time. The PC Card pops out.
3. Gently pull the card out of the slot.

## Using i.LINK Digital Video Recorders

You can connect a digital video (DV) recorder, such as an i.LINK®[1] digital video camera recorder, to the i.LINK® S400 (IEEE 1394) port on your computer. The i.LINK digital-video camera recorder is an external device that can be connected to your computer via IEEE 1394 interface and enables you to record and view digital images.

[1] i.LINK is a trademark of Sony used to designate that a product contains an IEEE 1394 connector. The i.LINK connection may vary, depending on the software application, operating system, and compatible i.LINK devices. All products with an i.LINK connection may not communicate with each other. Refer to the documentation that came with your compatible i.LINK device for more information on operating conditions and proper connection. Before connecting compatible i.LINK PC peripherals to your system, such as a CD-RW or hard disk drive, confirm their operating system compatibility and required operating conditions.

The i.LINK connection may vary, depending on the software application, operating system, and compatible i.LINK devices. All products with an i.LINK connection may not communicate with each other. Refer to the documentation that came with your compatible i.LINK device for more information on operating conditions and proper connection. Before connecting compatible i.LINK PC peripherals to your system, such as a CD-RW or hard disk drive, confirm their operating system compatibility and required operating conditions.

## Connecting an i.LINK digital video recorder

You can connect an i.LINK digital video (DV) recorder when the computer is on or off. Connecting the DV recorder when the computer is in a power saving mode (Standby or Hibernate) may cause the computer to malfunction.

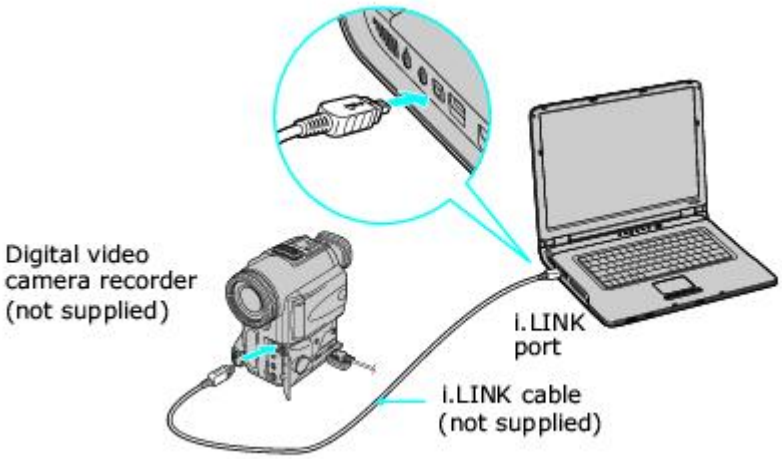
### Before you connect an i.LINK digital video recorder

- Do not connect more than one digital video camera recorder at a time. The preinstalled programs on your computer will not recognize multiple cameras.
- Do not connect an external device that requires power from the i.LINK port. The i.LINK port does not supply power to the external device.
- The i.LINK port supports transfer rates of up to 400 Mbps; however, the actual transfer rate is the lowest transfer rate of the external device.
- The i.LINK features available may vary depending on the programs you use. See the help guide that accompanied your program for more information.

### To connect an i.LINK digital video recorder

1. Turn on the digital video (DV) device and the computer.
2. Plug the i.LINK® cable into the i.LINK port on the DV device.
3. Plug the other end of the i.LINK cable into the i.LINK port on your computer. The **Found New Hardware** window appears on the lower right corner of your screen.

***Connecting an i.LINK Digital Video Camera Recorder***



See the guide that accompanied your digital video camera recorder for more information on its installation and use.

## Disconnecting the i.LINK digital video recorder

You can disconnect the digital video recorder while the computer is on or off. Simply unplug the i.LINK cable from the i.LINK port on the computer. Disconnecting the cable when the computer is in a power saving mode (Standby or Hibernate) may cause the computer to malfunction.

## Using a digital video camera recorder

Your computer comes with preinstalled driver software that is compatible with most Sony digital video camera recorders. If you purchased a camera that comes with its own driver software, install these drivers before you use the camera.

### To view images

You can view images captured by your digital video camera recorder three different ways. Select one set of instructions from the following list:

- If your digital video camera recorder is compatible with the preinstalled programs, the **Digital Video Device** window appears when you connect the camera to the computer. Select the program you want to use in this window, and click **OK**.
- Click **Start**, and click **All Programs**. Select a program in which to view your images.
- Click **Start**, and click **Welcome to VAIO life**. Click **Movies**, and select a program in which to view your images.

## Using Computer Monitors and Projectors

You can connect an external display (such as a computer monitor or a projector) to your computer.

## Connecting a computer monitor

Your computer can display images to the computer screen (LCD), to an external computer monitor, or to both the LCD and external monitor while your computer is on.

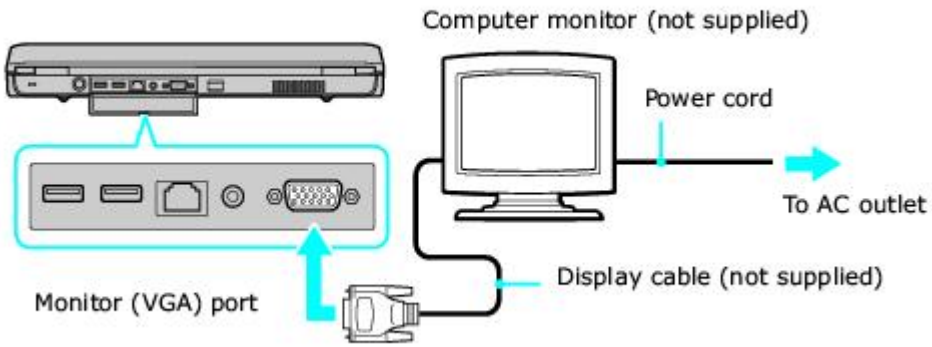
### To connect a computer monitor

1. Make sure the computer monitor is plugged into an AC outlet.
2. Plug the display cable into the Monitor (VGA) port  on the computer.
3. If it is not already on, turn on the computer monitor.
4. Press the **Fn**+**F7** keys to toggle the display between your computer, the monitor, or both the computer and monitor.

You cannot use the Monitor (VGA) port on your computer when a port replicator is connected to the computer. Use the Monitor (VGA) port on the port replicator instead.

# Connecting a multimedia device

## *Connecting a Computer Monitor*



You can connect a multimedia device, such as a multimedia computer monitor or projector, to your computer. Connecting a multimedia device enables you to display images on your computer screen (LCD), the multimedia device, or both.

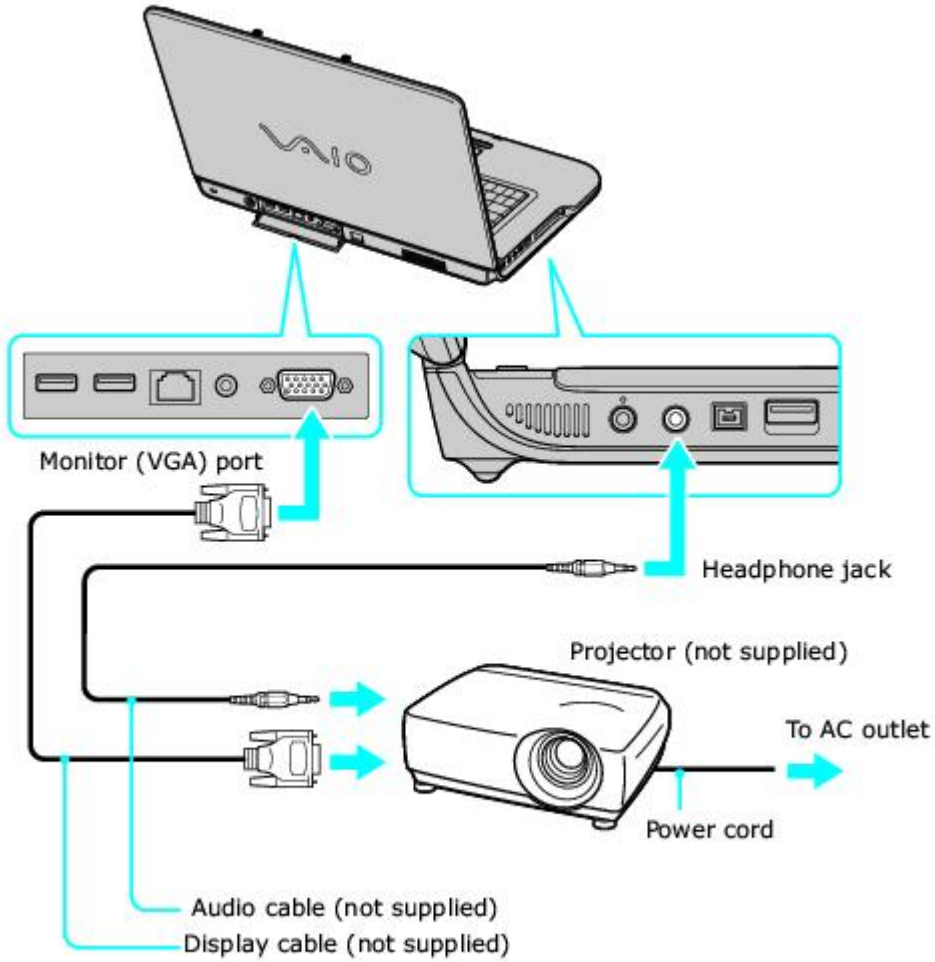
For information on connecting a TV to your computer, see Playing DVDs.

**To connect a multimedia computer monitor or projector**

1. Plug the device into an AC outlet.
2. Plug the device cable into the Monitor (VGA) port on your computer. If you are using a multimedia computer monitor, which has built-in speakers and a microphone, plug the audio cable into the Headphone jack on your computer to hear sound.

   To locate the Monitor port and Headphone jack, see "Locating Controls and Ports" in the "Setting Up" chapter of your printed VAIO® Computer Quick Start.
3. Turn on the device (if it is not already on), and then turn on your computer.

## *Connecting a Projector*



4. Press the **Fn**+**F7** key combination to toggle the display between your computer, the monitor, or both. See Selecting a display for more information.

✍ See the guide that accompanied your projector for more information on its installation and use.

## Selecting a display

Your computer comes with a Plug and Display feature, which enables you to connect an external display to the computer and instantly view an image on the connected display. An external display can be a projector, computer monitor, or TV.

When you connect an external display, the Plug and Display icon appears in the Windows® taskbar and the image appears on both the computer's LCD screen and the external display.

Clicking the Plug and Display icon launches the VAIO Control Center display dialog box, where you can customize the Plug and Display settings.

To switch the display between the computer screen (LCD), the external display, or both, use the Fn+F7 shortcut keys or the S1 button. See Using the S1 button for more information.

**Shortcut keys Result**

Fn+F7 Toggles the display between the computer screen (LCD), a connected external display, and both the LCD and an external display. You can also select the Setup option to adjust the Plug and Display settings. Select one display (LCD or an external display) when playing a DVD. When using a TV cable, connect the cable before you turn on the computer; otherwise, **Fn+F7** will not work.

You may not be able to display the computer screen (LCD) and an external display or projector at the same time, depending on the types of computer displays and projectors you are using.

Plug and Display customizes the screen resolution to fit within the external display. However, if the external display's screen resolution is larger than the computer's LCD screen resolution, Plug and Display adjusts both images to the largest resolution shared by both devices. If the image is distorted, you can always adjust the screen resolution manually.

**To adjust the screen resolution**

1. Click the **Start** menu and then click **Control Panel**.
2. Click **Appearance and Themes** and then click **Display**.
3. When the **Display Properties** window appears, select the **Settings** tab.
4. Use the slider in the **Screen resolution** box to adjust the screen resolution.

Plug and Display may not work properly if you use more than one TV connection at the same time.

## Disconnecting a computer monitor or projector

You can disconnect the external computer monitor or projector by unplugging the monitor (VGA) cable from your computer's port. Disconnecting the external display when the computer is in a power saving mode (Standby or Hibernate) may cause the computer to malfunction.

## Using Speakers

Your computer comes with built-in stereo speakers and selected models with an A/V port replicator come with external speakers. If your computer did not come with additional speakers and you wish to enhance the sound quality of your computer, shop Sony online at http://www.sonystyle.com/vaio or contact your local retailer. Make sure the speakers are designed for computer use.

See Connecting the speakers with built-in infrared receiver for instructions about how to connect external speakers supplied with the A/V port replicator.

## Connecting speakers

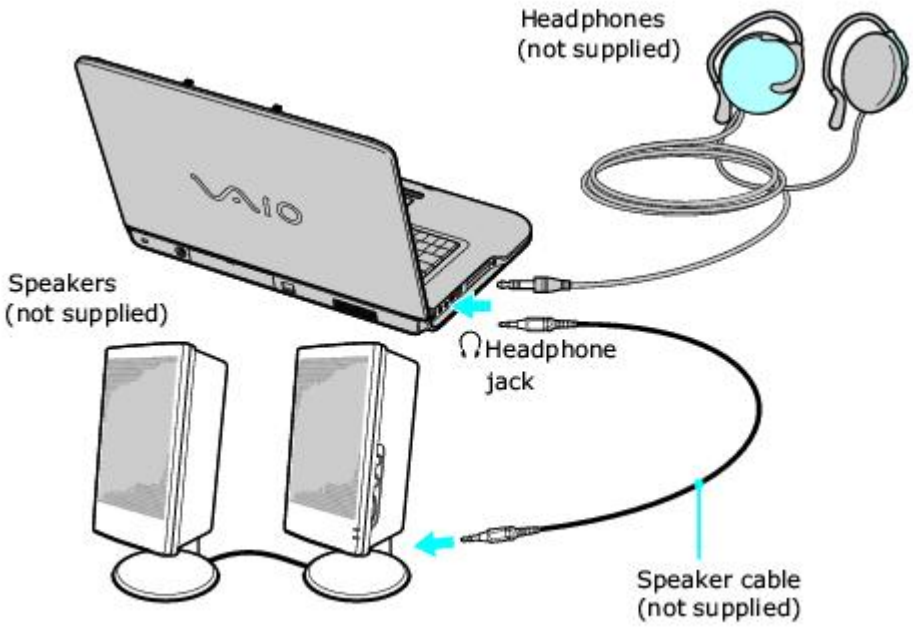
You can connect external speakers to your computer to enhance the sound quality of your computer.

**Do not place floppy disks on the speakers. The speakers' magnetic field may damage the data stored on the floppy disks.**

### To connect speakers to your computer

1. Turn down the volume of the speakers.
2. Plug the speaker cable into the Headphone jack on the computer.
3. Plug the other end of the speaker cable into the speaker.

***Connecting Speakers***



See the guide that accompanied your speakers for more information on its installation and use.

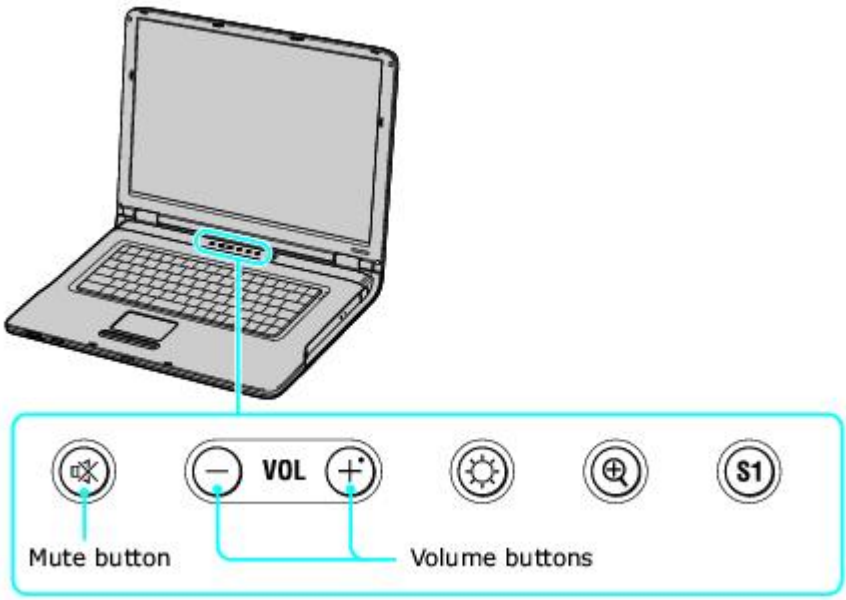
## Disconnecting speakers

You can disconnect external speakers when the computer is on or off. Simply unplug the speaker cable from the Headphone jack on the computer.

## Adjusting the sound

To increase and decrease the volume for playing CDs and DVDs, use the Volume buttons. You can also use the Mute button to enable and disable the sound. The Volume buttons and the Mute button are located above the keyboard.

### *Locating the Sound Buttons*



Alternatively, you can use the **Volume** icon on the Windows® taskbar to adjust the sound.

**To adjust the sound using the Volume icon**

1. Right-click the **Volume** icon on the Windows® taskbar, and select **Open Master Volume**. The **Master Volume** window appears.
2. Click and drag the **Master Volume** slider up to increase volume and down to decrease volume.
3. Click to cancel any **Mute** check boxes that are selected.

| Sound device | Function |
|---|---|
| Master Volume | Adjust the sound level from the speakers or headphones. |
| Wave | Adjust the wavfile sound or the system sound of Windows. |
| SW Synth | Adjusts the internal or external synthesizer volume. |
| CD Player | Adjust the volume of the CD in the optical drive. |
| Microphone | Adjust the internal or external microphone volume. |
| PC Beep | Adjust the beep sound when inserting or removing the PC Card and other devices. |
| Line In[1] | Adjusts the sensitivity of input volume. |

[1] On selected models only.

Adjusting the volume for playing CDs or DVDs does not adjust the volume for recording audio files. You can only adjust the recording volume in the **Recording Control** window. See Using a microphone to record sound for instructions on how to open this window.

## Enabling the sound

If you do not hear sound when playing a CD or DVD, the sound may be muted. Press the Mute button located above the keyboard. The Mute button toggles the audio output on and off. If you still cannot hear sound, you may need to enable the audio feature.

**To enable the audio feature**

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **System**. The **System Properties** window appears.
3. Select the **Hardware** tab, and click **Device Manager**. The **Device Manager** window, which lists the hardware devices, appears.
4. Double-click the icon representing name of the optical drive, such as DVD/CD-ROM drives.
5. Double-click the listed drive name, and click the **Properties** tab.
6. Click the **Enable digital CD audio for this CD-ROM device** check box if it is not already selected.

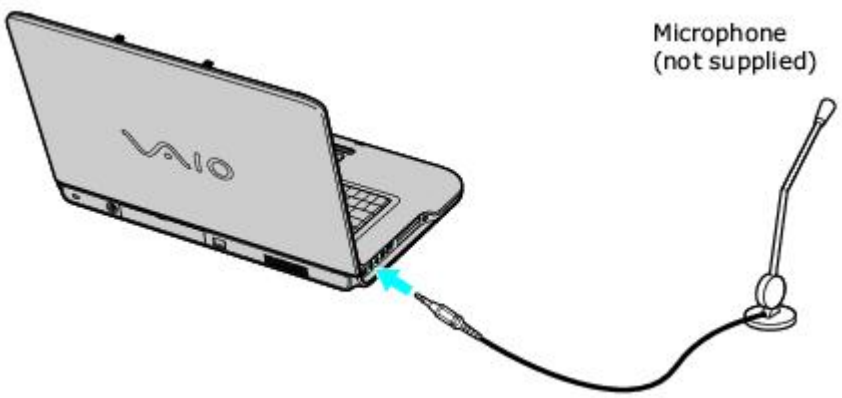
## Using Microphones

You can connect an external microphone to your computer to enable the sound input to your computer. Make sure your microphone is designed for computer use. If you wish to purchase a microphone, shop Sony online at http://www.sonystyle.com/vaio or contact your local retailer.

## Connecting a microphone

Plug the microphone cable into the Microphone jack[1] on the computer.

***Connecting a Microphone***



See the guide that accompanied your microphone for more information on its installation and use.

[1] A protruding dot located next to the Microphone jack distinguishes this jack from the Headphone jack.

## Disconnecting a microphone

You can disconnect an external microphone when the computer is on or off. Simply unplug the microphone cable from the Microphone jack on the computer.

## Using a microphone to record sound

You can record messages, memos, etc. by connecting a microphone to the Microphone jack[1]  on your computer.

### To record from a microphone

1. Click **Start** and then **Control Panel**. The **Control Panel** window appears.
2. Click **Sounds, Speech, and Audio Devices** and then **Sounds and Audio Devices**. The **Sounds and Audio Devices Properties** window appears.
3. Click the **Audio** tab.
4. In the **Sound Recording** box, click **Volume**. The **Recording Control** window appears.
5. Click the **Select** check box at the bottom of the **Microphone** column, if it is not already selected. Close the **Recording Control** window.

For help using Sound Recorder, click **Help** in the **Sound Recorder** window.

### To adjust the volume for recording sound

You can only adjust the volume for recording in the **Recording Control** window.

1. Click **Start** and then **Control Panel**. The **Control Panel** window appears.
2. Click **Sounds, Speech, and Audio Devices** and then **Sounds and Audio Devices**. The **Sounds and Audio Devices Properties** window appears.
3. Click the **Audio** tab.
4. In the **Sound Recording** box, click **Volume**. The **Recording Control** window appears.
5. Click and drag the **Microphone** slider up to increase volume, and down to decrease volume.
6. Close the **Recording Control** window.

[1] A protruding dot located next to the Microphone jack distinguishes this jack from the Headphone jack.

## Locating Ports and Jacks

A port replicator is a device that attaches to your computer and contains additional jacks and ports, such as USB ports. A port replicator may come with your computer, depending on the model you purchased. If you wish to purchase a port replicator, shop Sony online at http://www.sonystyle.com/vaio or contact your local retailer.

The printer port on this port replicator is intended for printer connections only.

## Connecting a Port Replicator

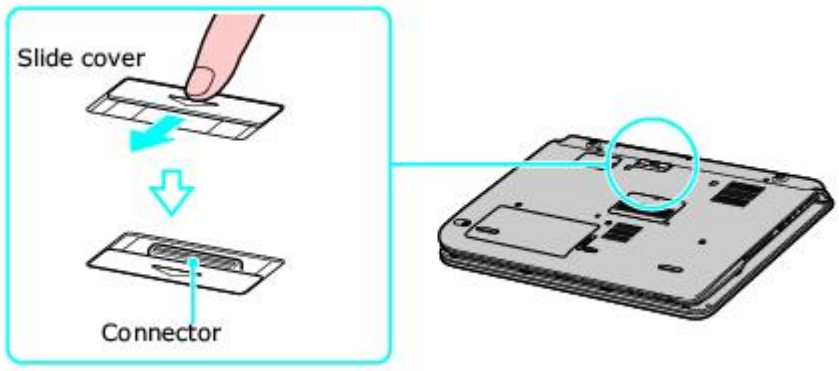
Connect a port replicator to the computer while the computer is off. Use the AC adapter (not the battery) to power the computer while it is connected to a port replicator.

Moving the computer with the port replicator attached could disconnect the AC adapter or power cord, and may cause the computer to lose power or malfunction.

**To connect a port replicator**

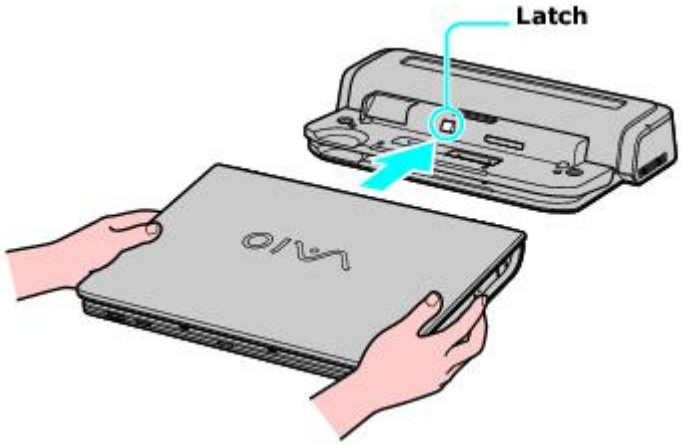
1. Turn off the computer, and disconnect all attached devices.
2. On the bottom of the computer, slide the port replicator cover down until the port replicator connector is completely visible.

***Sliding the Port Replicator Cover***



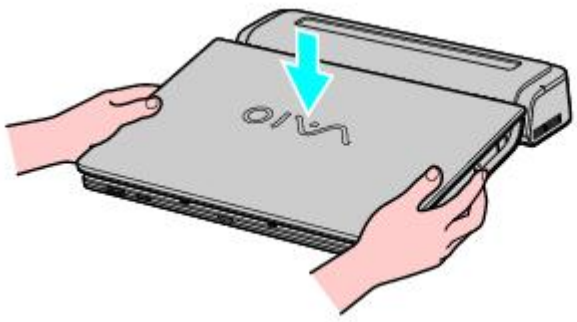
3. Align the connector on the bottom of the computer with the latch and the port replicator connector.
4. Gently push the computer down until it clicks into place.

***Connecting the Port Replicator***



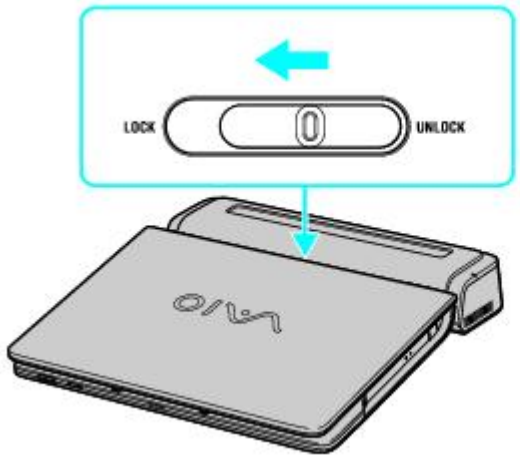
5. Make sure the port replicator is securely fastened to the computer.

***Securing the Port Replicator***



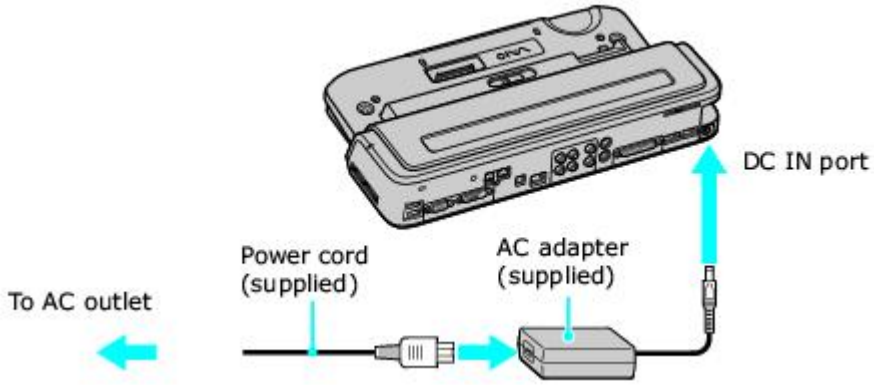
6. Slide the LOCK/UNLOCK switch located on the port replicator to LOCK.

***Locking the Port Replicator***



7. Plug the AC adapter into the DC IN port on the port replicator, and plug the power cord into the AC adapter and an AC outlet. The power indicator turns on.

***Connecting the AC Adapter to the Port Replicator***



✍ You can charge the battery by installing it before you connect the port replicator. The battery automatically charges once you connect the AC adapter.

8. Turn on the computer.

# Disconnecting the Port Replicator

**To disconnect the port replicator**

1. Close any active programs to prevent data loss.
2. Turn off the computer and disconnect the power cord.
3. Slide the LOCK/UNLOCK switch to UNLOCK.
4. Lift the computer away from the port replicator.

# TV Connections

Certain VAIO® computer models have the Sony VAIO Zone  software installed, enhancing your music, TV, and video enjoyment. VAIO Zone software provides options for TV, DVD, and video viewing, personal video recording, and music playback. This section describes how to set up your TV/TV channels, set-top box, and other features.

✍ The hardware configuration of your computer may vary from the illustrations shown in this section. Go to the Sony Online Support Web site at http://www.sony.com/pcsupport, to see the specifications sheet for your computer

## Setting Up TV Connections

Depending on the configuration and model you purchased, your computer may have TV connection capabilities. This section illustrates how to set up the cables and connections for TV viewing and recording.

✍ The hardware configuration of your computer may vary from the illustrations shown. To view the specific hardware configuration for your computer, see the online specifications sheet.

Before you begin setting up the cables and connections, you must attach the A/V port replicator to your computer. See Connecting the Port Replicator for instructions. The A/V port replicator must be attached to the computer at all times when using TV viewing/recording software.

## To set up TV connections

The best method of connecting your computer system, TV monitor or display, and cable service access, depends on the type of cable connection available in your home.

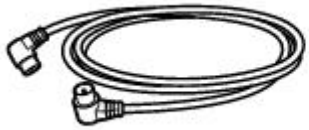
TV signal reception strength will vary widely depending on service availability in your area as well as the type of connection available.

The A/V port replicator is supplied with certain audio and video cables. Depending on your in-home cable access, you may require extra cables, adapters or connection equipment not supplied with your computer.

### The TV coaxial cable

One primary cable to connect your computer to a TV cable or antenna is the TV coaxial cable (supplied with the A/V port replicator). One end connects to the computer's VHF/UHF port, and the other end connects to the cable service access or antenna

***TV coaxial cable***

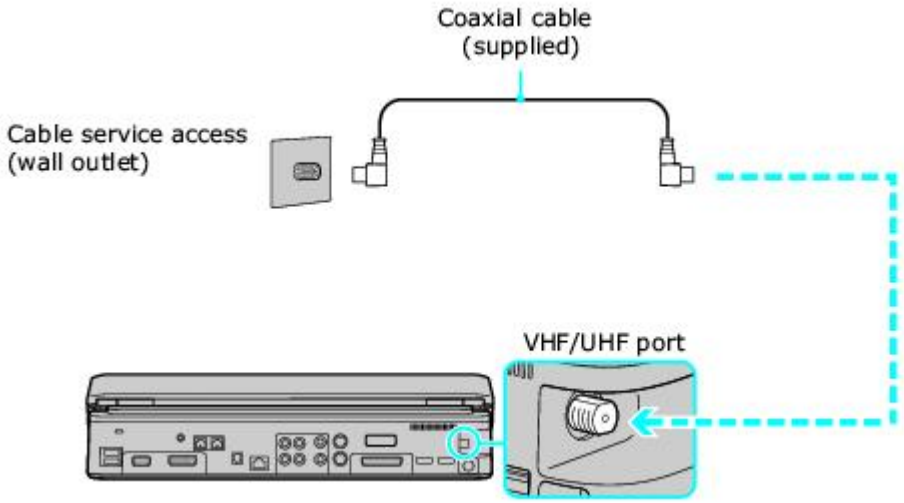


### Connecting to standard cable access (CATV)

**Option 1**

1. Connect one end of the coaxial cable (supplied) to your cable service access.
2. Connect the other end of the coaxial cable to the VHF/UHF port on the A/V port replicator.

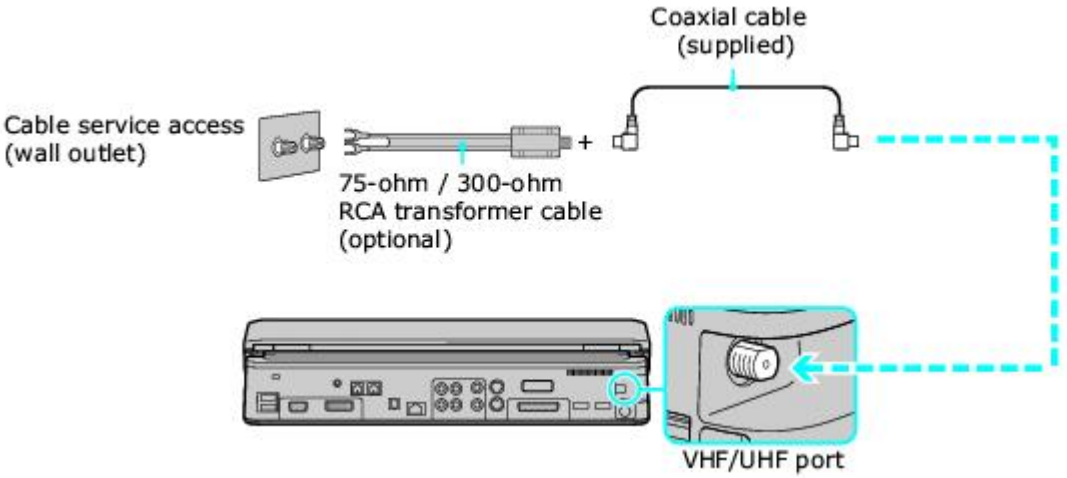
***To connect in CATV mode (Option 1)***



**Option 2**

1. Connect the two metal hooks on the RCA transformer cable (optional) to your cable service access.
2. Connect the TV coaxial cable (supplied) from the transformer end of the RCA transformer cable to the VHF/UHF port on the port replicator.

***To connect in CATV mode (Option 2)***



**Connecting to a standard antenna**

You can connect your computer to an indoor/outdoor antenna system, using Option 1 or Option 2 from the previous section, Connecting to standard cable access (CATV). Depending on the type of antenna system in your home, your connection may require a VHF/UHF RF combiner/transformer (optional) to connect your computer and the indoor/outdoor antenna system.

If you are connecting to an indoor/outdoor antenna, you may need to reorient the antenna for best reception. Move the antenna cable away from other power sources or connectors to reduce reception interference.

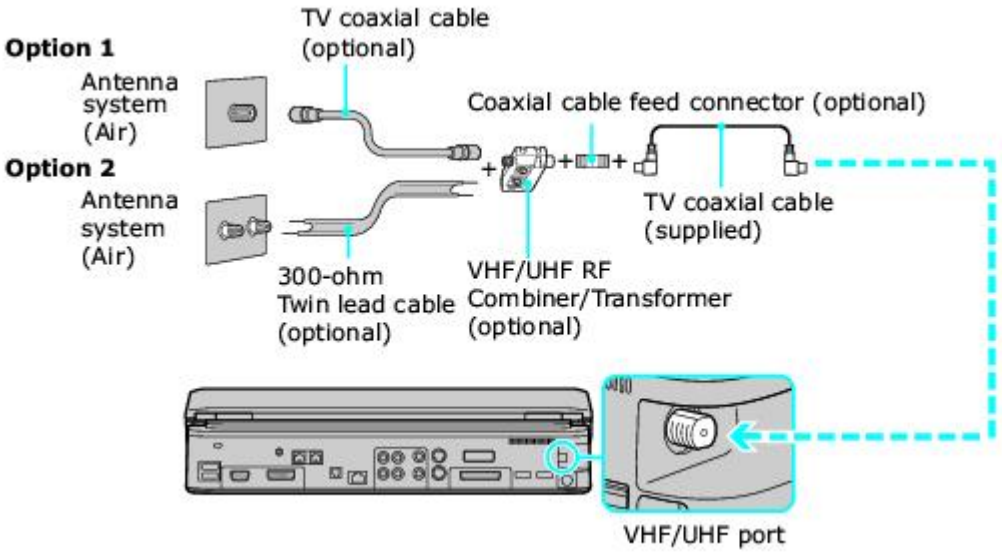
**Option 1**

1. Connect one end of a TV coaxial cable (optional) to your antenna outlet. Connect the other end to a VHF/UHF RF combiner/transformer (optional).
2. Connect the coaxial cable feed connector (optional) to the VHF/UHF combiner/transformer.
3. Connect the TV coaxial cable (supplied) from the feed connector to the VHF/UHF port on the port replicator.

**Option 2**

1. Connect both ends of the antenna's twin lead cable to the screw-type grips on the combiner/transformer.
2. Connect the coaxial cable feed connector (optional) to the VHF/UHF combiner/transformer.
3. Connect the TV coaxial cable (supplied) from the feed connector to the VHF/UHF port on the port replicator.

***To connect in standard antenna mode (air)***



Your VAIO® computer is supplied with certain audio and video cables. Depending on your in-home cable access, you may require extra cables, adapters or connection equipment not supplied with your computer.

**Connecting with a cable or satellite set-top box (STB)**

You can connect your computer to cable service access that uses a set-top box (cable or satellite). When using the set-top box (STB) setup, you can only change channels through the STB, using its controls or supplied remote control.

When using the STB setup:

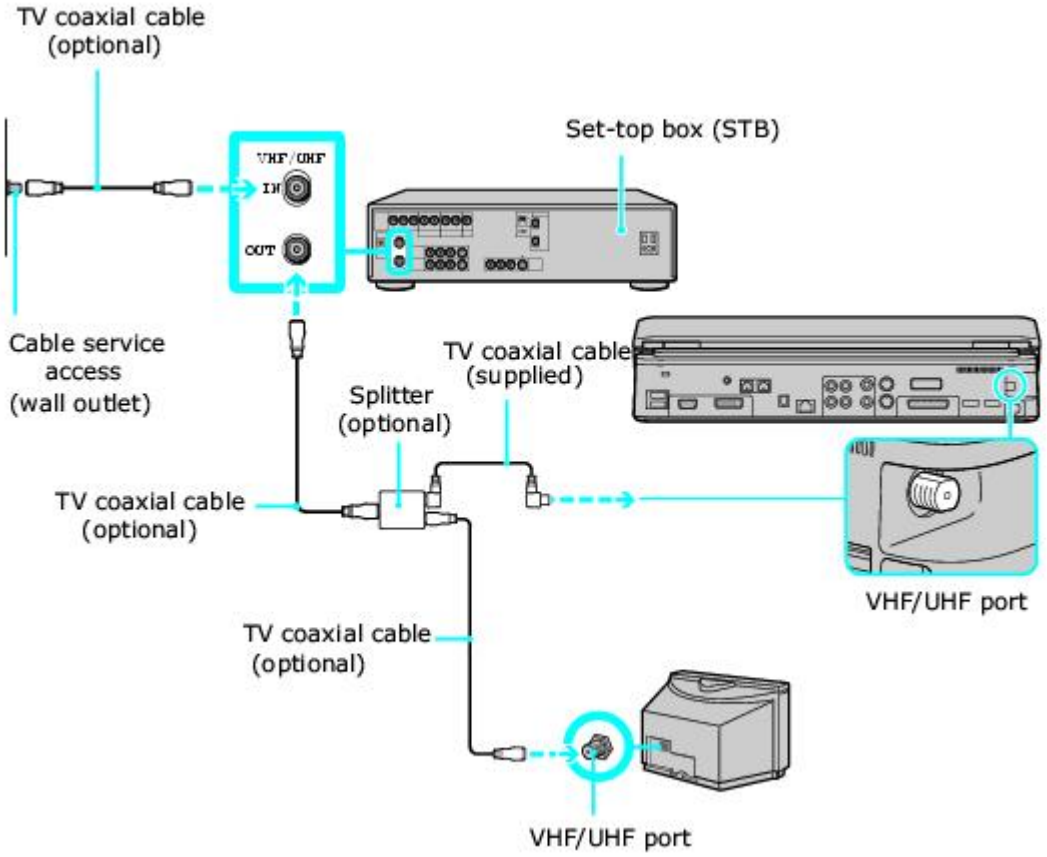
- A standard TV remote control cannot be used to change TV channels. You can use your TV remote control to set the TV to the channel-out number (channel 3, 4, etc.) or direct video input specified by your cable or satellite service provider.
- You may be able to use a universal remote control or commander to change TV channels, if the device is able to control the STB.

✍ Cable/satellite service, equipment, and features, may vary between service providers. Contact your cable or satellite service provider for details on using STB equipment and accessories.

**Option 1**

1. Connect one end of a TV coaxial cable (optional) to your cable service access. Connect the other end to the In jack on the back panel of your set-top box (STB).
2. Connect a second TV coaxial cable (optional) to the Out jack on your STB. Connect the other end to the single-connection end of a splitter device (optional).
3. Connect a third TV coaxial cable (supplied) to the double-connection end of the splitter device. Connect the other end to the VHF/UHF port on the port replicator.
4. Connect a fourth TV coaxial cable (optional) to the double-connection end of the splitter device. Connect the other end to the VHF/UHF port on the rear of your TV monitor or display.

***To connect in STB mode (Option 1)***



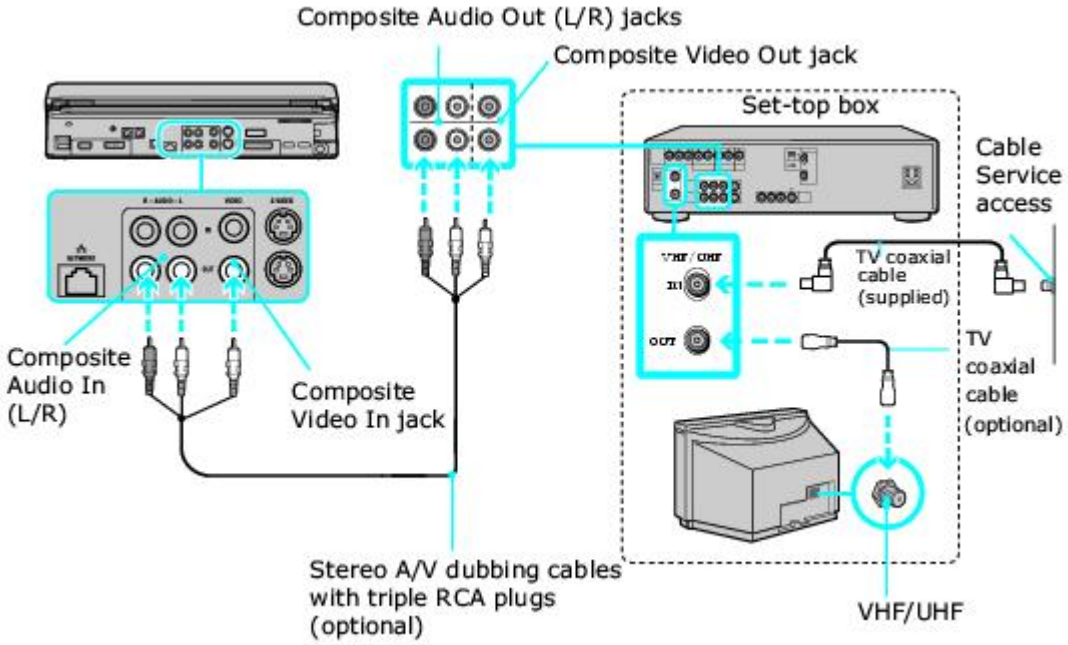
**Option 2**

1. Connect one end of the TV coaxial cable (supplied) to your cable service access. Connect the other end to the In jack on the back panel of your set-top box (STB).
2. Connect a second TV coaxial cable (optional) to the Out jack on your STB unit. Connect the other end to the VHF/UHF port on the rear of your TV monitor or display.

3. Connect one end of a stereo A/V dubbing cable with triple RCA jacks (optional), to the Video Out and Audio-OUT (L/R) jacks on the back panel of your STB unit, matching the plug and jack colors.

4. Connect the other RCA jacks of the stereo A/V dubbing cable into the Composite Audio-R (IN), Composite Audio-L (IN), and Composite Video (IN) jacks on the port replicator, matching the plug and jack colors.

***To connect in STB mode (Option 2)***



## Setting up additional equipment

This section illustrates how to set up additional equipment.

### To connect a compatible VCR or camcorder

Your VAIO® computer has both audio and video connection capability. You can locate the connections on the port replicator. You can connect a VCR or camcorder, using the audio jacks and video ports. Your VCR or camcorder may have either standard video or S Video connection capability.

### To connect with an S Video cable

1. Connect an S Video cable (optional) directly into the S Video In jack on the port replicator.
2. Connect the other end of the S Video cable into the appropriate port on your compatible VCR or camcorder.

### To connect with an audio cable (Dual RCA plugs)

1. Connect an audio cable with double RCA plugs at each end (optional) into the composite audio L and R In jacks, located on the port replicator.
2. Connect the other ends of the audio cable into the appropriate ports on your compatible VCR or camcorder.

### To connect with a stereo A/V dubbing cable (Triple RCA plugs)

1. Connect a stereo A/V dubbing cable with triple RCA plugs at each end (optional) directly into the composite video In port, composite audio L and R In jacks, located on the port replicator.
2. Connect the other ends of the stereo A/V dubbing cable into the appropriate jacks on your compatible VCR or camcorder.

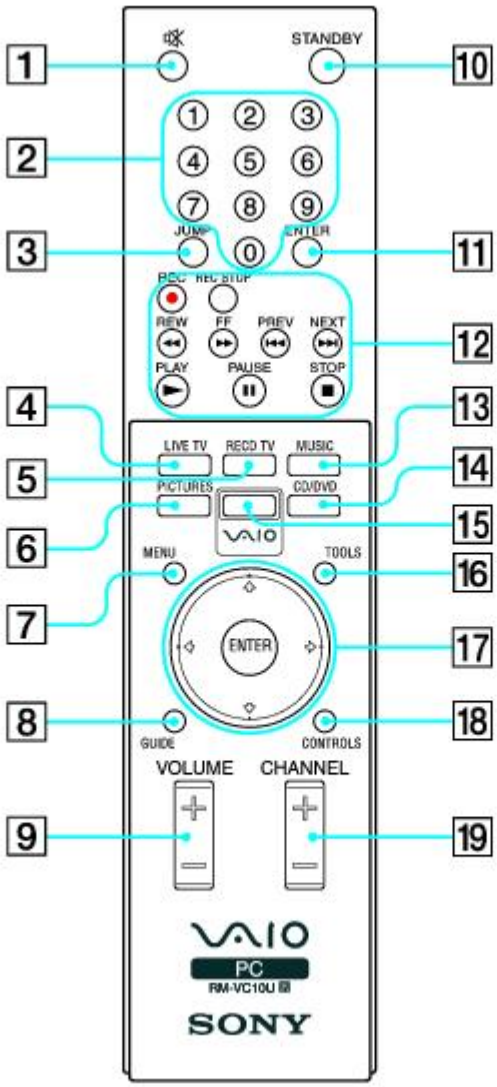
## Connecting the Remote Control

Your A/V port replicator comes with a remote control and speakers, which have a built-in infrared (IR) remote control receiver. The speakers must be plugged into one of the computer's USB ports in order to receive the signals from the remote control.

## About the Remote Control

The remote control can start and stop video recording and playback, select channels, and set viewing preferences. This section describes the basic functions of your remote control.

***Remote Control***



**1 MUTE button**

**18 CONTROLS button**

Press to display the playback controls in VAIO Zone software. Press again to hide the playback controls.

**19 CHANNEL button**

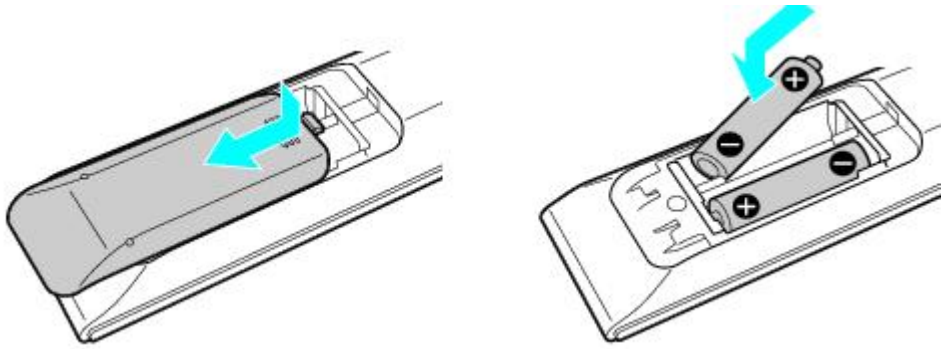
Press to change channels automatically (no number input required).

✍ For more details about the function buttons on your remote control, see the VAIO Zone software program Help.

## To set up the remote control

Insert two AA batteries (supplied) into the remote control as shown.

***Inserting batteries into the remote control***



Under normal use, the AA batteries may last up to six months. If your remote control does not operate properly, the batteries may need to be replaced.

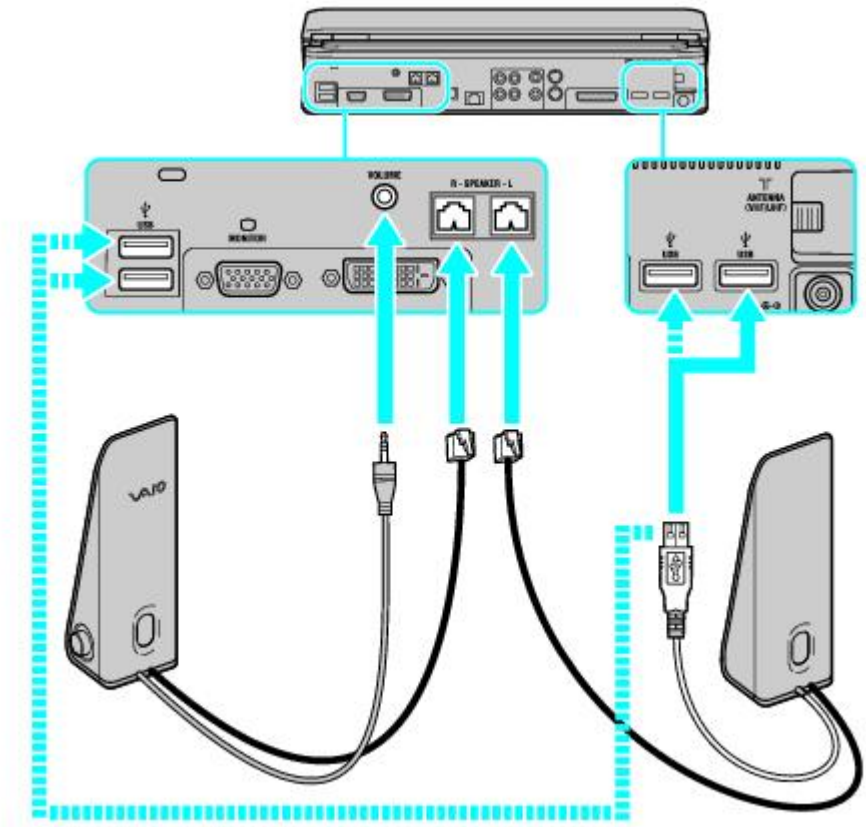
If your remote control is not being used for extended periods of time, remove the batteries to avoid possible damage from battery leakage.

**Connecting the speakers with built-in infrared receiver**

1. Connect the mini-jack end of the audio cable, which is attached to the right speaker, to the Volume jack on the port replicator.
2. Connect the USB cable, which is attached to the left speaker, to one of the USB connectors on the port replicator.
3. Connect the two audio cables with jack connectors to the Speaker Right and Left jacks on the port replicator. Make sure the connectors are properly inserted into the jacks.

   Sound may be muted or extremely loud if the connectors are not properly inserted.
4. Place the speakers in a position that enables it to communicate with your remote control.

***Connecting the Speakers***



✍ The infrared receiver must be visible in a line-of-sight with your remote control in order to function properly.

## Setting up VAIO Zone for TV viewing

When starting VAIO Zone  software for the first time, you are prompted to set up your TV channel source and establish the listings for your local TV program guide. The VAIO Zone setup wizard opens automatically to provide step-by-step instructions.

## Setting your computer's time and date

To maintain accuracy for your TV program guide listings and for timer recording, verify that your computer's time and date settings are correct. The time and date settings are displayed in the Windows® taskbar notification area.

To correct these settings:

1. Right-click with your mouse, or use the touch pad's right button.

   A shortcut menu appears.

2. Select **Adjust Date/Time**, and a dialog box appears.

3. Correct the date and time, if necessary.

## Starting VAIO Zone software

You can start VAIO Zone software using your remote control, wireless mouse, or the wireless keyboard's touch pad.

### To start VAIO Zone software with the remote control

1. Point the remote control towards the infrared receiver on the front panel of the computer.
2. Press the **VAIO** button on the remote control.

   The VAIO Zone main window appears.
3. Use the direction arrows and **ENTER** button to locate options and activate selections.

### To start VAIO Zone software with the wireless mouse or touch pad

1. Click **Start** in the Windows® taskbar and select **VAIO Zone** from the Start menu.

   The VAIO Zone main window appears.
2. Use the mouse or touch pad to locate options and activate selections.

***VAIO Zone main window***

## Starting the setup wizard (first time use)

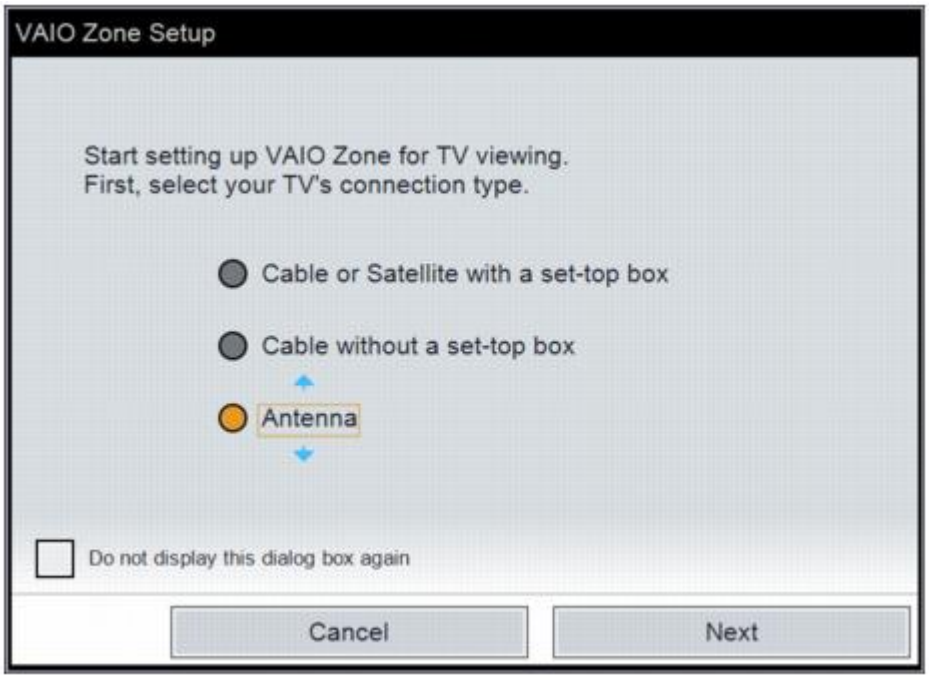
1. Connect your computer to the Internet.

   ✍ Your computer uses an active Internet connection to set up TV program listings in the electronic program guide (iEPG).

2. Click **Start** in the Windows taskbar and select **VAIO Zone** from the Start menu.

   When you start VAIO Zone software for the first time, the setup wizard appears, prompting you to select your TV connection situation.

***VAIO Zone Setup wizard***

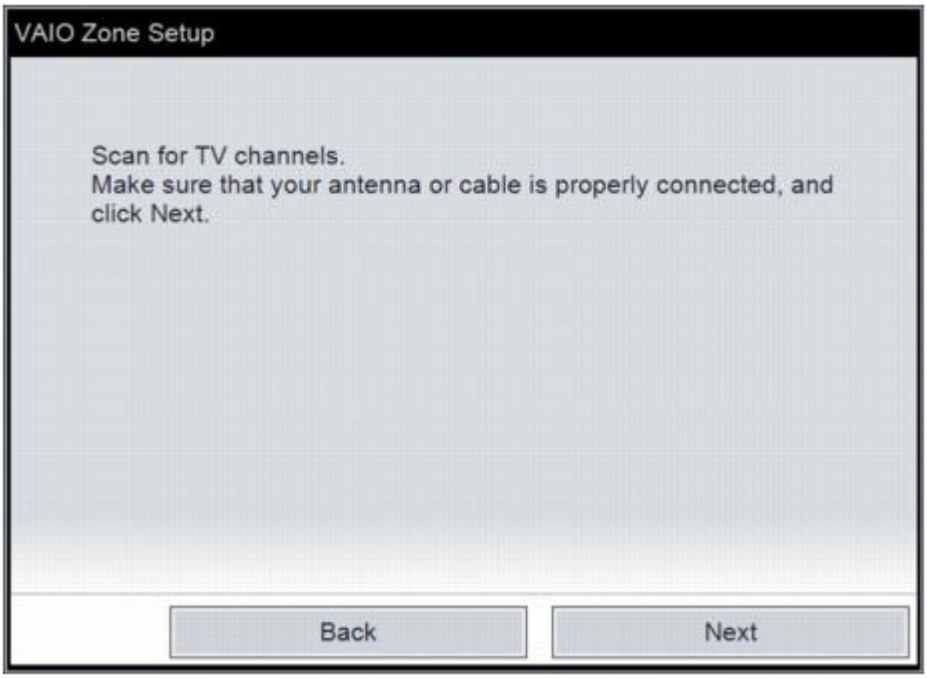


3. Select the option that best describes your TV connection type and select **Next**.

   - **Cable or Satellite with a set-top box —** Select this option if your TV signal is received through a digital cable or satellite service set-top box.
   - **Cable without a set-top box —** Select this option if you are using a TV coaxial cable to connect the cable service access (wall outlet), directly to your computer.
   - **Antenna —** Select this option if you connect an aerial antenna's cable directly to your computer.

   ✍ If you are not sure of the type of cable connection to select, contact your cable service provider for more information.

***VAIO Zone Setup wizard - TV channel scan***



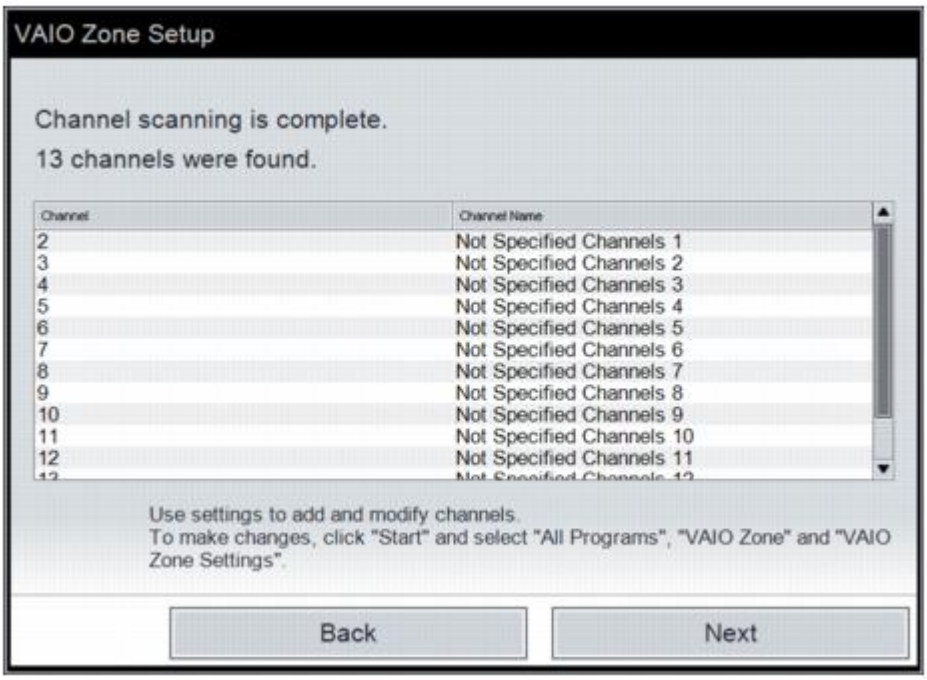
4. Follow the on-screen instructions, if necessary, and Select **Next**.

While VAIO Zone software is scanning for TV channels, you may see or hear intermittent TV programming. This is part of the channel scanning process.

***VAIO Zone Setup wizard - Channel scanning in process***

When channel scanning is complete, the wizard displays available channels.

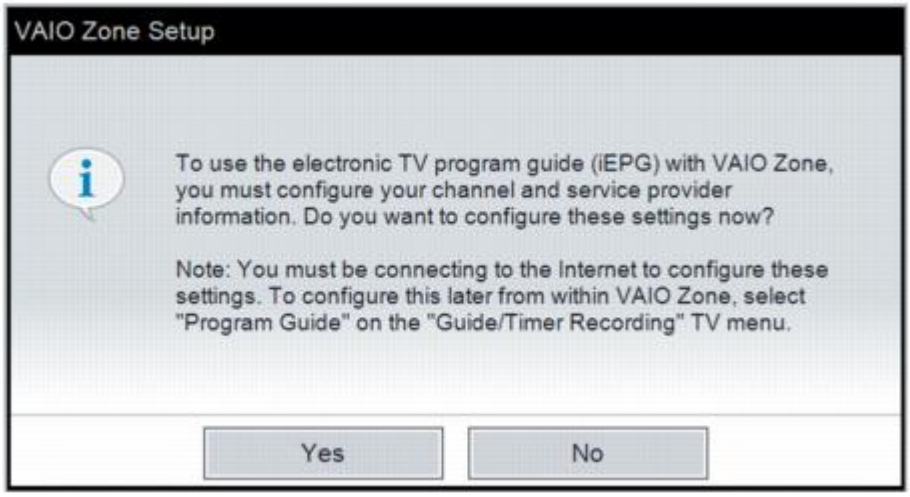
***VAIO Zone Setup wizard - Scanning complete***



5. If the channels displayed are correct and complete, select **Next**.

   A message window appears, prompting you to begin configuring your electronic TV program guide.

### *VAIO Zone Setup wizard - Set up electronic TV program guide*



6. Select **Yes** to begin iEPG setup.

   The **iEPG Channel Setup - Step 1** appears.

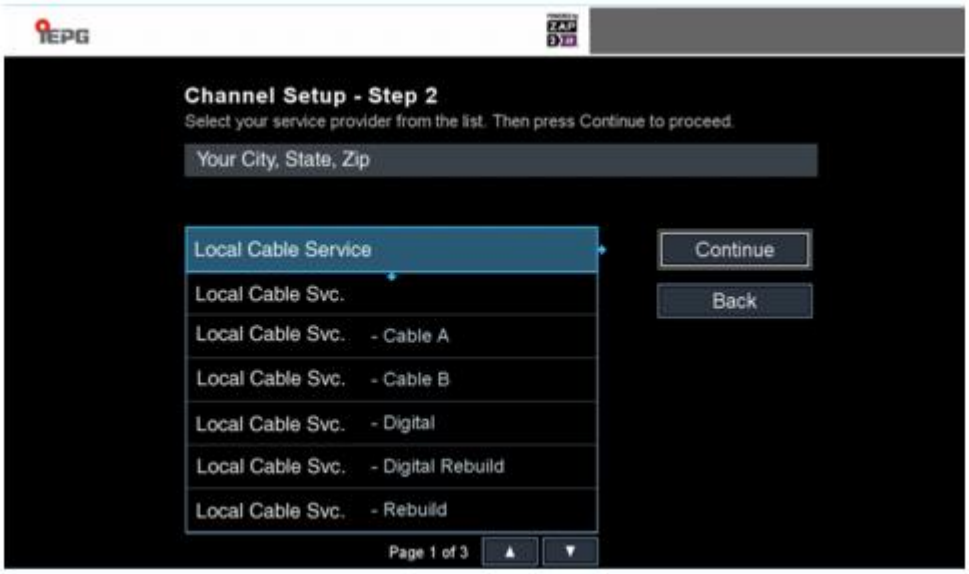
If you are not connected to the Internet, you cannot set up the electronic TV program guide (iEPG). VAIO Zone software begins playing a current TV program.

### *iEPG Channel Setup - Step 1*

7. On the iEPG Channel Setup window (Step 1), use the remote control or wireless mouse to enter in your zip code. Select **Continue**.

   A list of local cable service providers appears.

***iEPG Channel Setup - Step 2***



8. On the iEPG Channel Setup window (Step 2), use the remote control or wireless mouse to select your service provider. Select **Continue**.

   A listing of available TV channels appears.

***iEPG Channel Setup - Step 3***

9. Use the remote control or the mouse to scroll through the TV channel lineup, to verify that the listing is correct. Select **Yes** to confirm the lineup.

10. Press **Guide** on the remote control to view the electronic TV program guide, or press **Live TV** on the remote control to begin watching TV.

## Additional information about VAIO Zone software

VAIO Zone software is a media player and a personal video recorder software that provides many options for

- Watching TV programs, DVD movies, and other video content.
- Copying TV programs and your own video content to DVDs.
- Listening to music and creating your own audio CDs.
- Creating slide shows using your favorite photos, adding personal touches like music and transition effects.

### Locating VAIO Zone software Help

You can find instructions and other helpful information about VAIO Zone software in the software's Help.

To access the Help:

1. Click **Start** in the Windows® taskbar, and point to **All Programs**.
2. Point to **VAIO Zone**, and then click on **VAIO Zone Help**.

# Memory Upgrades

Before you upgrade your computer's memory, read the safety information in Precautions and Procedures. For the type of module and amount of memory installed on your computer, refer to the VAIO® Computer Specifications.

## Precautions and Procedures

**Sony recommends that memory upgrades be performed by an authorized Sony Service Center. To find the nearest center or agent, go to: http://www.sony.com/pcsupport.**

The procedures described below assume familiarity with the general terminology associated with personal computers and with the safety practices and regulatory compliance required for using and modifying electronic equipment. When installing a memory module in your computer, make sure you read the proper safety precautions below. Mistakes that occur when installing or removing a memory module may cause a malfunction.

- Turn off the computer. Disconnect the computer from its power source and from any telecommunications links, networks, or modems before you install or remove a memory module. Failure to do so may result in personal injury or equipment damage.
- Introducing any liquids or any foreign substances or objects into the memory slots, or other internal components of the computer, will result in damage to the computer.
- Electrostatic discharge (ESD) can damage disk drives, memory modules, and other components. Perform the procedures described below only at an ESD workstation. If such a station is not available, do not work in a carpeted area, and do not handle materials that produce or hold static electricity (cellophane wrappers, for example). Ground yourself by momentarily touching an unpainted metal object that is grounded, such as a pipe, radiator, or faucet.
- Do not open the memory module package until you are ready to install the module. The package protects the module from ESD.
- Use the special protective package to store a memory module and prevent ESD.
- Only use memory modules that are compatible with your computer. For the type of module and amount of memory installed on your computer, refer to the VAIO® Computer Specifications. If you wish to purchase a memory module, shop Sony online at http://www.sonystyle.com/vaio or contact your local retailer.

## Removing and Installing Memory Modules

Make sure you read the safety information in Precautions and Procedures before you remove or install a memory module. When installing a memory module, do not open the module package until you are ready to install it. The package protects the module from Electrostatic discharge (ESD).

The hardware configuration of your computer may vary from the illustrations shown. For information about the specific hardware configuration for your computer, memory upgrades, and which memory modules to use, refer to your VAIO® Computer Specifications.

## Option 1

The following instructions illustrate how to remove the memory module located underneath the bottom panel of the computer.

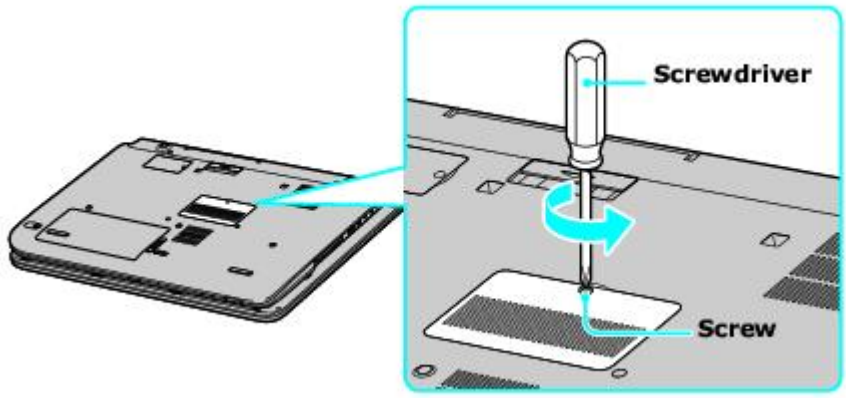
**To remove a memory module**

1. Turn off the computer and all attached devices.
2. Disconnect the power cord, all cables, and remove the battery if it is installed. See Removing a battery.
3. Wait for the computer to cool down.

   The interior of the computer becomes extremely hot during operation. Wait at least one hour for the computer to cool down before you remove the screws.
4. Turn the computer over and use a screwdriver to loosen and remove the screw(s) on the memory bay.

   **To avoid damaging the computer, do not remove or loosen any other screws.**

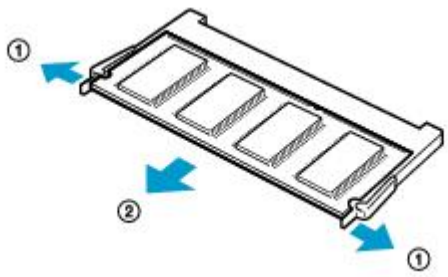
***Removing the Bottom Screw(s)***



5. Remove the memory bay cover carefully.
6. Touch a metal object (such as the connector panel on the back of your computer) to discharge static electricity.

   **Avoid touching any part of the motherboard or other components inside the computer.**
7. Remove the memory module by pulling out the tabs (see arrows No. 1), and pulling out the module in the direction of arrow No. 2. See To install a memory module for more information.

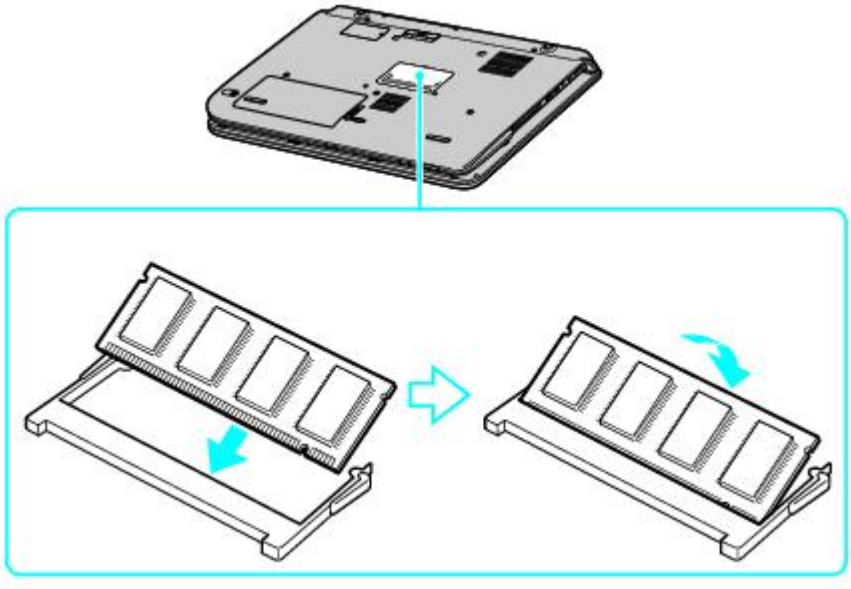
***Removing a Memory Module***



**To install a memory module**

1. Remove the new memory module from its packaging, and install the memory module by sliding it into the open slot at a 45-degree angle. See To remove a memory module.

***Installing a New Memory Module***



2. Push the module down until it snaps into place.
3. When the module is correctly seated, close the memory bay.
4. Replace the fastening screw(s) on the memory bay.
5. Make sure the system recognizes the new memory module. See Confirming Added Memory Capacity for more information.

## Option 2

The following instructions illustrate how to remove the memory module located underneath the keyboard.

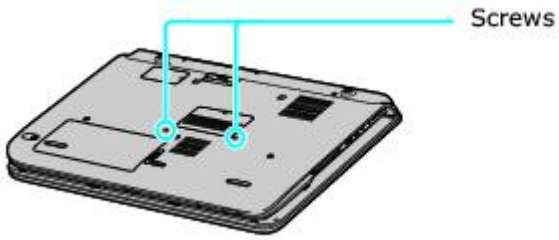
**To remove a memory module**

1. Turn off the computer and all attached devices.
2. Disconnect the power cord, all cables, and remove the battery if it is installed. See Removing a battery.
3. Wait for the computer to cool down.

   The interior of the computer becomes extremely hot during operation. Wait at least one hour for the computer to cool down before you remove the screws.
4. Turn the computer over and use a screwdriver to loosen and remove the two screws on the bottom of the computer.

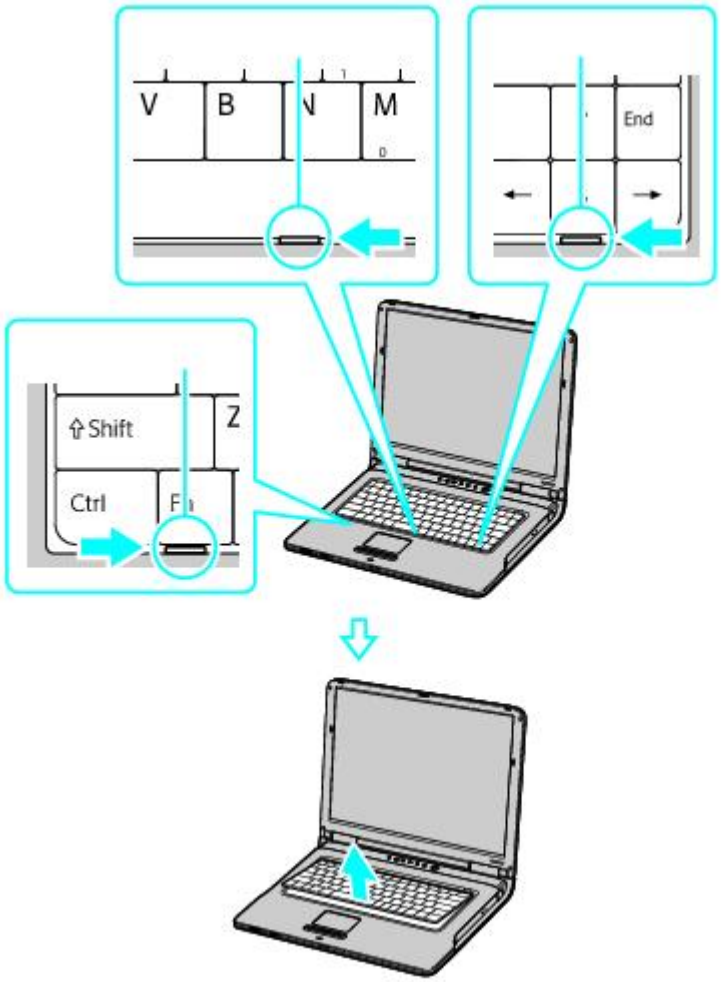
   **To avoid damaging the computer, do not remove or loosen any other screws.**

***Removing the Bottom Screw(s)***



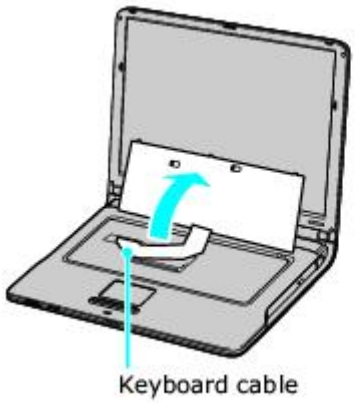
5. Turn the computer over again and position the computer so you are looking at the keyboard.
6. Use a small screwdriver to press the three (3) tabs, located at the bottom of the keyboard, away from the keyboard and toward the touch pad. This will loosen the keyboard from its slot location and will enable you to lift it up.

***Keyboard tab locations***



7. Gently lift the keyboard up, bottom edge first, and turn it over gently toward the LCD screen. Do not detach the cable when lifting the keyboard.

***Lifting the keyboard***



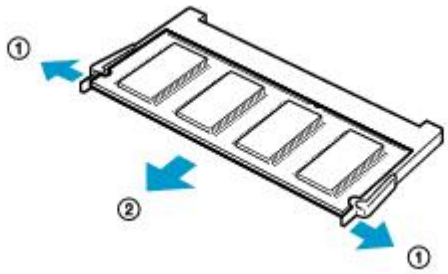
Lift the keyboard gently.
Take care not to damage the keyboard cable.

8. Touch a metal object (such as the connector panel on the back of your computer) to discharge static electricity.

⚠ **Avoid touching any part of the motherboard or other components inside the computer.**

9. Remove the memory module by pulling out the tabs (see arrows No. 1), and pulling out the module in the direction of arrow No. 2. See To install a memory module for more information.

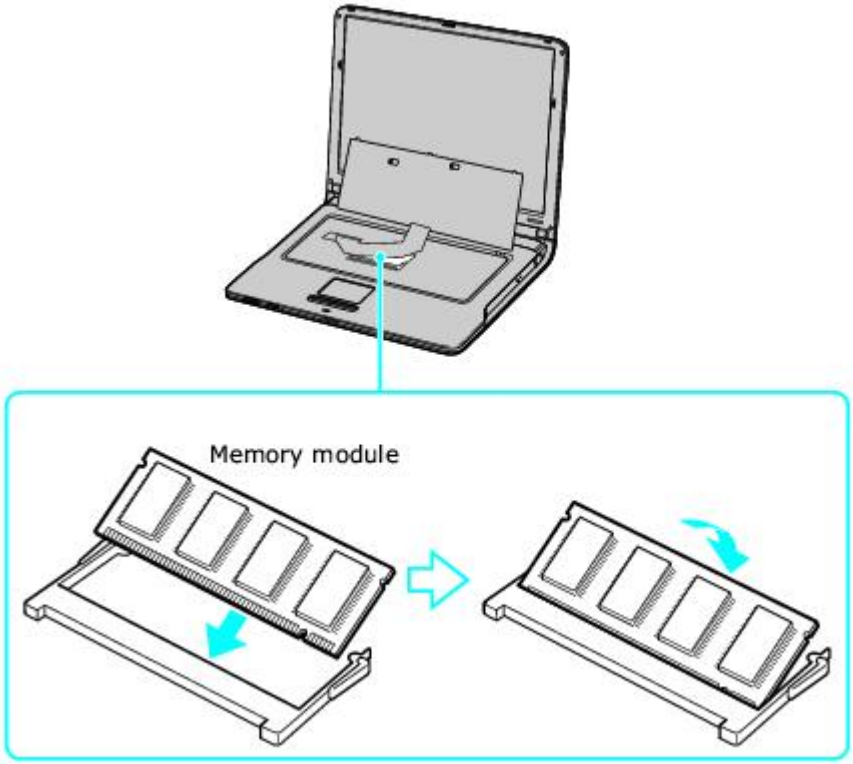
***Removing a Memory Module***



**To install a memory module**

1. Remove the new memory module from its packaging, and install the memory module by sliding it into the open slot at a 45-degree angle. See To remove a memory module.

***Installing a New Memory Module***



2. Push the module down until it snaps into place.
3. When the module is correctly seated, gently flip the keyboard back over the computer, making sure the keyboard is also correctly seated.
4. Replace the fastening screws on the bottom of the computer.
5. Make sure the system recognizes the new memory module. See Confirming Added Memory Capacity for more information.

## Confirming Added Memory Capacity

After you have installed a new memory module, make sure the operating system recognizes it.

**To check your system's memory**

1. Turn on the computer.
2. Click **Start** on the Windows® taskbar, point to **All Programs**, and then click **VAIO Control Center**.
3. Select the **List** tab, and double-click **System Information**. The **System Information** dialog box appears.
4. Make sure the **System Memory** displayed in the **System Information** box matches the amount of memory installed.

**The displayed memory may be less than the installed memory due to the amount used by the display adapter.**

### What do I do if my computer won't start?

- Make sure the computer is securely plugged into a power source and turned on. Make sure the power indicator shows the power is on.
- Make sure the battery is inserted properly and charged.
- Make sure the floppy disk drive (if applicable) is empty.
- If the computer is plugged into a power strip or uninterruptible power supply (UPS), make sure the power strip or UPS is turned on and working.
- If you are using an external display, make sure it is plugged into a power source and turned on. Make sure the brightness and contrast controls are adjusted correctly. See the guide that came with your display for details.
- Disconnect the AC adapter and remove the battery. Wait three to five minutes. Reattach the AC adapter and reinsert the battery, and press the Power button to turn on the computer.
- Condensation may cause the computer to malfunction. If this occurs, do not use the computer for at least one hour.

✍ For further instructions, contact Sony Computing Support (http://www.sony.com/pcsupport).

## What do I do if a BIOS error appears when my computer starts?

If the message "Press <F1> to resume, <F2> to setup" appears at the bottom of the screen, follow these steps:

1. Press the **F2 key**. The **BIOS Setup** menu appears.
2. Set the date (month/day/year). Press **Enter**.
3. Press the **Down Arrow** key to select **System Time**, and then set the time (hour: minute: second). Press **Enter**.
4. Press the **Right Arrow** key to select the **Exit** tab, and then press the **Down Arrow** key to select **Get Default Values**. The message **Load factory default values.** appears.
5. Press the **Enter** key. The **Load Optimal Defaults?** window appears.
6. Select **Ok**, and press **Enter**.
7. Select **Exit (Save Changes)**, and press **Enter**. The **Save configuration changes and exit setup?** window appears.
8. Select **Ok**, and press **Enter**. The computer restarts.

If this occurs on a regular basis, contact Sony Computing Support (http://www.sony.com/pcsupport).

## What do I do if the message "Operating system not found" appears when my computer starts, and why won't Windows start?

- Make sure the computer does not have a "non-bootable" floppy disk in the floppy disk drive (if applicable).
- If a non-bootable floppy disk is in the drive:
  1. Remove the floppy disk.
  2. Restart the computer and confirm that the Microsoft® Windows® operating system starts properly.
- If the Windows operating system still does not start, follow these steps to initialize the BIOS:
  1. If there is a disk in the floppy disk drive, then remove it.
  2. Turn off the computer.
  3. Remove any peripheral devices connected to the computer.
  4. Restart the computer.
  5. Press the **F2 key** when the VAIO logo appears. The **BIOS Setup** window appears.
  6. Press the **Right Arrow** key → to select the **Exit** menu.
  7. Press the **Down Arrow** key ↓ to select **Get Default Values**. The message **Load factory default values.** appears.
  8. Press the **Enter** key. The **Load Optimal Defaults?** window appears.
  9. Select **Ok**, and press **Enter**.
  10. Select **Exit (Save Changes)**, and press **Enter**. The **Save configuration changes and exit setup?** window appears.
  11. Select **Ok**, and press **Enter**. The computer restarts.

## What do I do if my computer stops responding?

It is best to turn off your computer using the Turn Off Computer option on the Microsoft® Windows® Start menu, located on the taskbar. Using other methods, including those listed below, may result in loss of unsaved data.

- Click **Start** on the Windows® taskbar, select **Turn Off Computer**, and then click **Turn Off**.
- If your computer does not turn off, press the **Ctrl**+**Alt**+**Delete** keys simultaneously. When the **Windows Task Manager** dialog box appears, click **Turn Off** from the **Shut Down** menu.
- If your computer still does not turn off, press and hold the power button or slide and hold the power switch until the computer turns off.
- If your computer stops responding while playing a CD or DVD, press the **Ctrl**+**Alt**+**Delete** keys simultaneously. You can turn off the computer from the **Windows Task Manager**.

  Pressing the **Ctrl**+**Alt**+**Delete** keys simultaneously or turning off the computer with the power button or switch may cause loss of data.

- Remove the AC adapter and battery.

## Why won't my computer enter Standby or Hibernate mode?

Your computer may become unstable if the operating mode is changed before the computer completely enters Standby or Hibernate.

To restore the computer to normal operating stability:

1. Close all open programs.
2. Restart the computer. Follow these steps:
    1. Press the **Windows** key .
    2. Press **U**.
    3. Press **R** to select restart.
3. If the computer does not restart, follow these steps:
    1. Press the **Ctrl**+**Alt**+**Delete** keys simultaneously. The **Windows Task Manager** window appears.
    2. Press and release **Alt** to highlight the menu bar, and press the **Right Arrow** key to select Shut Down.
    3. Press **Enter**.
    4. Press **R** to select restart.
4. If this procedure does not work, press and hold the power button or slide and hold the power switch until the computer turns off.

## Why is the sound of my computer's fan so loud?

The computer's fan may be running at a high speed to cool the CPU. By lowering the CPU speed, you also lower the speed and noise level of the computer's fan. You can use the power schemes to lower the CPU speed.

**To lower the CPU speed using the power schemes[1]:**

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
3. Select **Portable/Laptop** in the **Power schemes** box.
4. Click **Apply**.
5. Click **OK**.

[1] Available on selected models only.

## Why does the System Properties dialog box display a slower CPU speed than the maximum?

This is normal. Because your computer's CPU utilizes a type of CPU speed controlling technology for power conservation purposes, System Properties may display the CPU's current speed instead of the maximum speed.

## Why don't my changes appear on the computer screen (LCD)?

You may need to refresh the computer screen. Press and hold the **Windows** key  , and press **D** twice.

## How can I protect my computer against security threats, such as viruses?

The Microsoft® Windows® operating system is preinstalled on your computer. The best way to protect your computer against security threats, such as viruses, is to download and install the latest Windows updates regularly.

You can get important Windows updates by doing one of the following:

- **The Automatic Updates** feature — This feature automatically searches for and delivers updates directly to your computer whenever you are connected to the Internet.
- **The Windows Updates Web site** — This site enables you to download computer updates without turning on the **Automatic Updates** feature.

Your computer must be connected to the Internet before you can receive updates.

**To use the Automatic Updates feature**

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Security Center**. The **Windows Security Center** window appears.
3. Click  **Automatic Updates**. The **Automatic Updates** dialog box appears.
4. Select to set up automatic or scheduled updates, and click **OK**.

**To visit the Windows Updates Web site**

1. Connect to the Internet.
2. Type http://windowsupdate.microsoft.com/ in the address bar of your browser.

   The **Microsoft Windows Update** and **Security Warning** windows appear.
3. In the **Security Warning** window, click **Yes to install and run Windows Update.**
4. In the **Microsoft Windows Update** window, click **Scan for updates**, and follow the on-screen instructions.

## How do I keep my preinstalled antivirus software updated?

You can keep the preinstalled Norton Internet Security software program current with the latest updates from Symantec Corporation.

**To download and install the latest security update**

1. Double-click the **Norton Internet Security** icon  in the Taskbar notification area.

   If you have not previously registered the antivirus software, a series of information wizards appear.

   1. Follow the on-screen instructions to complete each wizard
   2. Double-click the **Norton Internet Security** icon again.

      The **Norton Internet Security** window appears.

   If you have previously registered this antivirus software, the **Norton Internet Security** window automatically appears.

2. Click **Live Update**, located near the top of the window.

## How do I know when the battery is charged?

To determine the remaining battery charge, see Locating battery information.

## How do I know when the battery is charged?

To determine the remaining battery charge, see Locating battery information.

## When is the computer using AC power?

When the computer is directly connected to the AC adapter, it uses AC power, even if a battery is installed.

## When should I recharge the battery?

- When the battery level falls below 10 percent.
- When both the battery and power indicators blink.
- When you have not used the battery for a long time.

## When should I replace the battery?

If the battery power is still low after charging it, the battery may be reaching the end of its life and should be replaced.

## Should I be concerned that the installed battery is warm?

No, it is normal for the battery to be warm when it is powering the computer.

## Can my computer enter Hibernate mode while using battery power?

Your computer can enter Hibernate mode while using battery power, but some software programs and peripheral devices prevent the system from entering Hibernate mode. If you are using a program that prevents the system from entering Hibernate mode, save your data frequently to avoid losing data. See To activate Hibernate mode for information on how you can manually activate Hibernate mode.

## Why doesn't my computer enter Hibernate mode?

You may first need to enable Hibernate mode. Follow these steps:

1. Click **Start** on the Windows® taskbar, and click **Control Panel**.
2. Click **Performance and Maintenance**, and click **Power Options**. The **Power Options Properties** window appears.
3. Select the **Hibernate** tab.
4. Click to check the box next to **Enable hibernation**.

## Why doesn't my modem work?

- Make sure the telephone cable is securely plugged into the Modem jack on the computer and the wall jack.
- Make sure the telephone cable is working. Plug the cable into an ordinary telephone and listen for a dial tone.
- Make sure the telephone number the program is dialing is correct.
- Make sure the software you are using is compatible with the computer's modem. (All preinstalled Sony programs are compatible.)

- Make sure the telephone number the program is dialing is correct.
- Make sure the software you are using is compatible with the computer's modem. (All preinstalled Sony programs are compatible.)

## Why is my modem connection slow?

Your computer is equipped with a V.90 compatible modem. Many factors may influence modem connection speed, including telephone line noise or compatibility with telephone equipment, such as fax machines or other modems. If you think your modem is not connecting properly to other PC-based modems, fax machines, or your Internet Service Provider (ISP), follow these steps:

- Ask your telephone company to verify your telephone line is free of any line noise.
- If your problem is fax-related, make sure there are no problems with the fax machine you are calling and that it is compatible with fax modems.
- If you are having a problem connecting with your ISP, make sure the ISP is not experiencing technical problems.
- If you have a second telephone line, try connecting the modem to that line.

## Why can't my computer connect to a wireless LAN access point?

- Connection availability is affected by distance and obstructions. You may need to move your computer away from obstructions or closer to any access point you may be using.
- Make sure the Wireless LAN switch on the computer is on.
- Make sure power to the access point is on.
- Make sure the access point is displayed in the Available networks window.
- Make sure the encryption key is correct.

## Why can't my computer connect to a wireless LAN access point?

- Make sure the Wireless LAN switch on the computer is on.
- Make sure power to the access point is on.
- Make sure the access point is displayed in the Available networks window.
- Make sure the encryption key is correct.

## Why can't I access the Internet?

- Check the access point settings. Refer to the instructions supplied with the access point.
- Make sure your computer and the access point are connected to one another.
- Move your computer away from obstructions or closer to any access point you may be using.
- Make sure your computer is properly configured for Internet access.

## Why is the data transfer speed slow?

- The wireless LAN data transfer speed is affected by distance and obstructions between devices and access points. Other factors include device configurations, radio conditions, and software compatibility. To maximize the data transfer speed, move your computer away from obstructions or closer to any access point you may be using.

- If you are using a wireless LAN access point, the device may be temporarily overloaded depending on how many other devices are communicating via the access point.

- If your access point interferes with other access points, change the access point channel. See your access point instructions for more information.

## Why is the communication speed interrupted or slowed down when MPEG2 data is transferred?

The typical effective data transfer speed via an access point is 4-5 Mbps when adhering to the IEEE 802.11b standard or both the IEEE 802.11b and IEEE 802.11g standards (selected models only). High-rate stream transfers with MPEG2 data may lower this rate.

## How do I avoid data transfer interruptions?

- When your computer is connected to an access point, data transfer interruptions may occur when using large files or if the computer is in close proximity to microwaves and cordless telephones.
- Move the computer closer to the access point.
- Make sure the access point connection is intact. For more information, see Checking your network connection status.
- Change the access point channel. See your access point instructions for more information.

## Can I connect to an IEEE 802.11a device?

Computers with built-in wireless LAN support the IEEE 802.11b standard only. Devices connecting to a wireless LAN using the IEEE 802.11a standard cannot connect to devices using the IEEE 802.11b standard.

## What are channels?

Wireless LAN communication occurs on divided frequency bands known as channels. Third-party wireless LAN access point channels may be preset to different channels from Sony devices.

If you are using a wireless LAN access point, refer to connectivity information contained in your access point instructions.

## When I change the encryption key, the network connection stops. What do I do?

Two computers with built-in wireless LAN may loose a peer-to-peer network connection if the encryption key is changed. You can either change the encryption key back to the original profile or re-enter the key on both computers so the key matches.

## Why can't other Bluetooth devices discover my computer?

- Make sure both devices have the Bluetooth® feature enabled.
- Your computer and the device may be too far apart. Wireless Bluetooth technology works best when the devices are within 32 feet (10 meters) of each other.
- The discovery option on your computer may be disabled. To ensure the discovery option is available, follow these steps:

  1. From the **Start** menu, click **Control Panel**.
  2. Click **Printers and Other Hardware**, and then click **Bluetooth Devices**.

     The **Bluetooth Devices** window appears.
  3. On the **Options** tab, click to select the **Turn discovery on** check box.
  4. Click **OK**.

    4. Click **OK**.

## Why can't other Bluetooth devices connect to my computer?

- Make sure the other device is authenticated.
- Your computer may not allow connections from other devices. To enable Bluetooth device connections, follow these steps:

    1. From the **Start** menu, click **Control Panel**.
    2. Click **Printers and Other Hardware**, and then click **Bluetooth Devices**.

       The **Bluetooth Devices** window appears.
    3. On the **Options** tab, click to select the **Allow Bluetooth devices to connect to this computer** check box.
    4. Click **OK**.

## How will I know when another Bluetooth device is requesting authentication?

A notification prompt appears on the Windows® taskbar. To verify the notification feature is enabled, follow these steps:

1. From the **Start** menu, click **Control Panel**.
2. Click **Printers and Other Hardware**, and then click **Bluetooth Devices**.

   The **Bluetooth Devices** window appears.
3. On the **Options** tab, click to select the **Alert me when a new Bluetooth device wants to connect** check box.
4. Click **OK**.

## Why is my Bluetooth connection slow?

- The 2.4 GHz radio frequency used by Bluetooth and wireless LAN devices is also used by other devices. Bluetooth devices incorporate technology that minimizes interference from other devices using the same wavelength, however, communication speed and connection range may be reduced. Interference from other devices may also stop communication altogether.

- Connection availability is affected by distance and obstructions. You may need to move your computer away from obstructions or closer to the device to which it is connected.

- Identify and remove obstacles between your computer and the device to which it is connected.

- Please note that due to limitations of the Bluetooth standard, large files may occasionally be corrupted during continuous transfer due to electromagnetic interference from the environment.

## Can I use a device equipped with Bluetooth technology on airplanes?

With Bluetooth technology, your computer transmits a radio frequency of 2.4 GHz. Sensitive locations, such as hospitals and airplanes, may have restrictions on the use of Bluetooth devices, due to radio interference. Check with facility staff to verify that use of the Bluetooth feature on your computer is permitted.

## How do I maintain CDs and DVDs?

- Avoid touching the surface of the disc with your fingers. Fingerprints and dust on the surface of the disc may cause reading errors.
- Try using canned compressed air to clean dusty discs.
- Do not clean the disc with solvents (such as benzine, thinner, alcohol, commercially available cleaners, or anti-static spray), which may damage the disc. To clean the disc, follow these steps:

    1. Hold the edge of the disc, and use a soft cloth to wipe the surface from the center out.
    2. If the disc is badly soiled, moisten a soft cloth with water, wring it out well, and use it to wipe the surface of the disc from the center out.
    3. Wipe off any remaining moisture with a dry, soft cloth.

- Do not drop or bend the disc.

## Why does my computer freeze when I try to read a disc?

- The disc your computer is trying to read may be dirty or damaged. Follow these steps:

    1. Restart the computer by clicking **Start**, **Turn Off Computer**, and **Restart**.
    2. Eject the disc from the optical drive.
    3. Examine the disc for dirt or damage. If the disc is dirty, see How do I maintain CDs and DVDs? for instructions on how to clean it.

## What do I do if the drive tray won't open?

- Make sure the computer is on.
- Press the Eject button on the optical drive.
- If the Eject button does not work, click **Start** on the Windows® taskbar, and click **My Computer**. Right click the optical drive icon, and select **Eject** from the shortcut menu.
- If none of the above options work, insert a thin, straight object (such as a paper clip) in the manual eject hole near the Eject button.

## What do I do if the optical drive isn't playing my CD or DVD properly?

- Make sure the disc was inserted into the drive with the label facing up.
- Make sure the necessary program(s) is installed according to the manufacturer's instructions.
- If the CD or DVD is dirty or damaged, the computer will stop responding. Follow these steps:

  1. Restart the computer by pressing the **Ctrl+Alt+Delete** keys, and selecting **Restart** from the **Shut Down** menu of the **Windows Task Manger** dialog box.
  2. Remove the CD or DVD from the optical drive.
  3. Check the disc for dirt or damage. If you need to clean the disc, see How do I maintain CDs and DVDs? for instructions.

- If you are playing a CD or DVD and cannot hear sound, follow these steps:

  1. Double-click the **Volume** icon  on the **Taskbar Notification** area, and click to cancel the **Master Volume Mute All** and **Wave Mute** check boxes.
  2. Check the volume setting in the audio mixer.
  3. If you are using external speakers, check the volume settings on the speakers and the connections between the speakers and the computer.
  4. Make sure the CD audio feature is enabled and the correct driver software is installed. Follow these steps:

     1. Click **Start** on the Windows® taskbar, click **Control Panel**, **Performance and Maintenance**, and **System**. The **System Properties** window appears.
     2. Select the **Hardware** tab, and click **Device Manager** in the **Device Manager** box. A window with a listing of the computer's hardware devices appears.

        If an "X" or an exclamation point appear on the listed device, you may need to enable the device or reinstall the drivers.

     3. Double-click the optical drive device list to open the submenu.
     4. Double-click the listed drive, and select the **Properties** tab.
     5. Click to select the **Enable digital CD audio for this CD-ROM device** check box, if it is not selected.

        You can confirm the driver software by selecting the **Driver** tab, and clicking **Driver Details**.

     6. Click **OK** to close the window.

- Make sure an adhesive label was not attached to the CD or DVD. Adhesive labels can come off while the disc is in the optical drive and damage the drive or cause it to malfunction.
- If a region code warning appears, the disc may be incompatible with the optical drive. Check the DVD package to make sure the region code is compatible with the optical drive.
- If you notice condensation on the computer, do not use the computer for at least one hour. Condensation can cause the computer to malfunction.

## Why did the computer screen (LCD) go blank?

- Your computer screen may go blank if the computer has lost power or has entered a power saving mode (Standby or Hibernate). If the computer is in LCD (Video) Standby mode, press any key to activate the computer screen. See Using power saving modes for more information.

- Make sure the computer is plugged into a power source and is on. The power indicator on the computer will be on if the computer is on.

- If your computer is using battery power, make sure the battery is inserted properly and is charged. See Using the Battery for more information.

- If the display mode is set to external display, use the **Fn+F7** key combination. See Selecting a display for more information.

## Why can't I view the entire DVD video display on a TV screen?

The display resolution may not be properly set. To adjust the display resolution, see Selecting a display for more information. It is recommended that you adjust the display resolution to 1024 x 768 or smaller, depending on the size of the external display screen.

## How do I adjust the image on the TV screen?

Use the controls on your external display to adjust the image. See the help guide that accompanied your display for more information.

## How do I change the video resolution on the TV screen?

The video may not appear on the entire TV screen if your computer resolution is set larger than 1024 x 768. Adjust the video resolution to 1024 x 768 or smaller.

✍ If you are using the A/V Out jack, plug the audio-video (AV) cable into the computer before you start the computer.

To change the video resolution, follow these instructions:

1. Right-click the desktop, and select **Properties** from the shortcut menu. The **Display Properties** dialog box appears.
2. Select the **Settings** tab.
3. Move the screen resolution slider to the left to reduce the size and to the right to increase the size of the video resolution.

## How do I switch the computer screen (LCD) from LCD to TV?

Press the **Fn+F7** keys to view the image on either the computer screen (LCD) or the TV. See Selecting a display for more information.

## Why can't I print a document?

- Make sure the printer is on, and the printer cable is securely connected to the ports on your printer and computer.
- Make sure the printer is compatible with the Microsoft® Windows® operating system installed on your computer.
- You may need to install the printer driver software before you use the printer. See the guide that accompanied the printer for more information.
- If the printer is not functioning after the computer resumes from a power saving mode (Standby or Hibernate), then restart the computer.
- If the bidirectional communication functions are provided with your printer, disabling the functions on your computer may enable printing. Follow these steps:

1. Click **Start**, and then **Control Panel**.
2. Click **Printers and Other Hardware**.
3. Click **Printers and Faxes**.
4. Right-click an unused printer and select **Properties**.
5. Click the **Ports** tab.
6. Click to cancel the **Enable bidirectional support** check box.
7. Click **OK**.

This change to the settings disables the bidirectional communication functions of your printer, such as data transfer, status monitoring, and remote panel.

## Why can't I save music files onto my Memory Stick media?

- Copyright protected music cannot be checked out to any Memory Stick media other than MagicGate Memory Stick media.
- Using recorded music requires permission of the copyright holders.
- Sony is not responsible for music files that cannot be recorded from a CD or downloaded from other sources.

## Can I copy images from a digital video camera using Memory Stick media?

Yes, and you can view video clips that you have recorded with Memory Stick media-compatible video camera recorders.

## How do I prevent damage to the Memory Stick media?

- Do not use the media in locations that are subject to static electricity or electrical noise.
- Do not touch the media connector with your finger or metallic objects.
- Do not attach labels other than the supplied label to a media.
- Do not bend, drop, or apply strong shock to the media.
- Do not disassemble or modify the media.
- Do not allow the media to get wet.

## How do I extend the life of the Memory Stick media?

- Use the supplied storage case. See the instructions that came with your media for more information on its use.
- Do not use or store the media in a location that is subject to:
  - Extremely high temperatures, such as in a car parked in the sun
  - Direct sunlight
  - High humidity or places with corrosive substances

# Support Options

The section contains information on where to go for answers to questions about your VAIO® computer and the preinstalled software.

# Sony Support Information

Refer to the following sources for answers in the sequence listed below.

### 1 VAIO® Computer Documentation

This on-screen VAIO® Computer User Guide and the printed VAIO Computer Quick Start provide detailed information on how to maximize your computer's capabilities and solve common problems.

### 2 Program Guides and Help Files

The preinstalled programs on your computer may come with individual help guides. These guides are stored on the hard disk as on-screen Help files. You can find the Help files from the Help menu under the specific program.

### 3 Operating System Online Support

Your computer comes preinstalled with a Microsoft® Windows® operating system. For operating system support, you can visit Microsoft® customer support at: http://support.microsoft.com/directory/.

### 4 Sony Computing Support

This service provides instant access to information on commonly encountered problems. Type a description of the problem and the Knowledge Database searches for the corresponding solutions online. You can visit Sony Computing Support at: http://www.sony.com/pcsupport.

### 5 VAIO Update

When your computer is connected to the Internet, VAIO Update automatically notifies you when critical software and security information is posted on the support Web site. Click the VAIO Update notice to open the VAIO Support Web site and view the information. You can also right-click the **VAIO Update** icon  in the **Taskbar Notification** area and select **Go to VAIO Web Support** to open the support Web site.
